

Ecology response for H/26/101165 14 UPPER NORTHAM ROAD, HEDGE END,
SOUTHAMPTON, SO30 4DW

Ground floor rear extension and attached garage following the demolition of the existing garage with alterations the fenestration.

Gina Aftanas

1/6/26

This site is in an amber impact risk zone for great crested newts. There are nearby records of slow worms, bats, stag beetles, and hedgehogs.

I have reviewed the site photos and do not see any obvious potential habitat for these species. The existing flat roof garage is well lit due to the side windows, so not likely to provide roosting space for bats. There may be some potential habitat for hedgehogs and slow worms in the unmown vegetation along the side of the garden and in the wood pile at the back of the garage.

A precautionary working method must be used to prevent harm to wildlife that could be using this site. It should include:

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

The wood pile must be dismantled by hand.

Any excavations must be covered at night or be fitted with a small animal escape ramp.

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
