

Ecology response for H/26/101393 11 CONWAY CLOSE, CHANDLER'S FORD, EASTLEIGH, SO53 3NW

Single storey wrap-around extension.

Gina Aftanas

2/6/26

There are records of bats, reptiles, hedgehogs and dormice near this site.

I have reviewed the site photos and there is no potential habitat for these species in the rear garden. The area that would be affected by this proposal is hard standing and closely mown lawn.

Informative:

A precautionary working method to protect small animals is required. It must include the following:

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
