

Ecology response for H/26/101449 3 MERDON CLOSE, CHANDLER'S FORD, EASTLEIGH, SO53 1EF

First-floor side extension above existing garage, including front dormer and associated external alterations

Dorothy Hei-Tung-Hoh

2/6/26

There are records of bats and hedgehogs nearby. This site is in a red impact risk zone for great crested newts. The proposal won't affect any newt or hedgehog habitat, but a precautionary working method will be required for the locations of building materials.

I have reviewed the photo of the site on Google maps and do not see any obvious potential bat roost features. Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
