

Ecology response 8 6 26 for H/26/101398 2 LOWER NEW ROAD, WEST END,
SOUTHAMPTON, SO30 3FL

Hip to gable loft conversion with rear dormer and single storey rear extension.

Charlie Vallis

8/6/26

I have reviewed the site photos. Although the soffits are in good condition with grills over the vents, there are crevices and gaps visible in at least two photos which could be used by bats. A preliminary bat roost appraisal (PRA) is required before determination. The ecologist who does the survey should include the most appropriate ecological enhancements for this site.

A precautionary working method for hedgehogs will also be required.

There are records of bats and hedgehogs very close to this site.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
