

Ecology response for H/26/101491 11 BROWNHILL ROAD, CHANDLER'S FORD, EASTLEIGH, SO53 2EB

Loft conversion including hip-gable with front and rear dormers, alterations to fenestration, stepped access to rear and installation of entrance gates.

Charlie Vallis

23/6/26

This site is in an amber impact risk zone for great crested newts. There are records of bats, nesting swifts and hedgehogs nearby.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Photos of any areas of the garden affected by the proposal are also required. This includes the area of stepped access to the rear and the area affected by work to install the entrance gates.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
