

Ecology response 29 6 26 for H/26/101459 37 NELSON ROAD, BISHOPSTOKE, EASTLEIGH, SO50 6BR

Erection of a first-floor extension to provide a bathroom

Dorothy Hei-Tung-Hoh

29/6/26

I have reviewed the site photos and do not see any potential bat roost features.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements can be agreed before determination or can be conditioned.

There are records of bats, hedgehogs and slow worms very close to this site.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
