Good afternoon Rebecca

Thanks for consulting the Pollution Team on the planning application CS/26/101642 for the Licence to conduct maintenance dredging and disposal at Hamble jetty and approaches at Hamble oil Terminal Jetty.

I have reviewed the following documents:

- ABP Southampton (May 2025). Southampton Maintenance Dredge Protocol Update. Baseline Document. Reference R.4792 v.2
- MMO Results template (18/11/2025).

The baseline document conclude that maintenance dredging and disposal activities are not likely to be considered having a permanent impact to controlled waters and will not cause deterioration in the status of quality elements. The sediments results are typically below the Cefas AL1 and are considered acceptable for dredging and disposal. Therefore, I have no objections in terms of contaminated land.

It was not clear what operation hours are proposed ? I believe it will be connected to the tide but would be good to understand if works are proposed at night time.

Thank you
Pollution team
Andre
