

Ecology response for H/26/101657 64 KINGSWAY, CHANDLER'S FORD, EASTLEIGH, SO53 1FJ

Demolition of existing rear garage structure, erection of single storey rear extension.

Alexandra Stone

8/7/26

This site is partly in a red and partly in an amber impact risk zone for great crested newts. There are records of common toads at an adjacent property and records of bats and hedgehogs very close to the site.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings. Photos of any areas of the garden affected by the proposal are also required.

Amber (suitable habitat, likely to be present) – *When development falls into the red or amber zones on the impact risk map, developers MUST prove to their local planning authorities that their development plans pose 'no risk' to great crested newts.* The first step is to provide photos of any areas of the garden which would be affected by the development. Photos of the whole garden are required to determine whether it would provide potential habitat for other species.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
