

Ecology response 11 8 26 for H/26/101657 64 KINGSWAY, CHANDLER'S FORD, EASTLEIGH,  
SO53 1FJ

Demolition of existing rear garage structure, erection of single storey rear extension.

Alexandra Stone

11/8/26

I have reviewed the site photos. I don't see any potential bat roost features on this property; however, the neighbouring property roof has some slipped tiles and a hole in the roof. The area around the existing garage is mostly hard standing, however there is some vegetation that could shelter hedgehogs. The lawn is closely mown. It is not likely that great crested newts would be using this area. A precautionary working method will be required.

Please could you add the following informatives to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Any vegetation to be removed to facilitate the development must be removed outside of bird nesting season (which is usually between the beginning of March and the end of August). If this is not possible then vegetation can be cleared only after being checked for nesting birds by a suitably qualified ecologist up to 24 hours before the start of works. If any active nests are found, work must stop, and a 5 m buffer must be erected around the nest to protect it from disturbance until after the birds have fledged and left the nest.

A precautionary working method must be used to prevent harm to wildlife that could be using this site. It should include:

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

This site is partly in a red and partly in an amber impact risk zone for great crested newts. There are records of common toads at an adjacent property and records of bats and hedgehogs very close to the site.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings. Photos of any areas of the garden affected by the proposal are also required.

**Amber** (suitable habitat, likely to be present) – *When development falls into the red or amber zones on the impact risk map, developers MUST prove to their local planning authorities that their development plans pose 'no risk' to great crested newts.* The first step is to provide photos of any areas of the garden which would be affected by the development. Photos of the whole garden are required to determine whether it would provide potential habitat for other species.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
