

Ecology response for H/26/101806 2 PINE CRESCENT, CHANDLER'S FORD, EASTLEIGH, SO53 1LL

Single storey front and rear extensions, 2no. rooflights to the front elevation and changes to the fenestration.

Gina Aftanas

12/8/26

There are records of bats near this site. I have reviewed the site photos and don't see any potential bat roost features or areas of the garden which would be affected by the proposals, and which would provide habitat for protected species. There are hanging tiles, but they are in good condition with no slipped or missing tiles.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
