

Ecology response for H/26/101769 78 PANTHEON ROAD, CHANDLER'S FORD, EASTLEIGH, SO53 2NS

Garage Conversion, Single storey Ground floor front extension and First floor rear extension.

Alexandra Stone

12/8/26

There are records of bats and hedgehogs nearby with records of slow worms and nesting swifts in the wider area. This site is in an amber impact risk zone for great crested newts.

Red (highly suitable habitat) or **Amber** (suitable habitat, likely to be present) – *When development falls into the red or amber zones on the impact risk map, developers MUST prove to their local planning authorities that their development plans pose 'no risk' to great crested newts.*

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Photos of the garden are also required.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
