

Ecology response for PN/26/102035 IMPERIAL HOUSE, GRANGE DRIVE, HEDGE END, SOUTHAMPTON, SO30 2AF

Application for Prior Approval for installation of solar panel array to roof

Rebecca Altman

9/9/26

Although this site is within a red impact risk zone for great crested newts and there are records of otters and hedgehogs nearby, I don't see any potential habitat for these species in the area of impact for this proposal. There are also records of bats nearby, and this proposal will affect most of the aspects of the roof.

The photos of the building available on Google maps do not show any obvious potential bat roost features. Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11. A bat box and a swift nest box may be appropriate for this building. Alternatively a bat box or a bird box can be mounted on a nearby mature tree.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
