

Ecology response for H/26/101931 17 SHEARS ROAD, BISHOPSTOKE, EASTLEIGH, SO50 6FZ

Remove existing shed and lean to. Erect single storey rear extension and detached garden room and store.

Gina Aftanas

9/9/26

No objection.

There are records of bats and hedgehogs near this site.

I have reviewed the site photos and do not see any obvious potential roost features for bats or habitat for hedgehogs at the rear of the house.

Surface water drainage arrangements are required for detached garden room and store.

Please could you add the following informatives to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Any vegetation to be removed to facilitate the development must be removed outside of bird nesting season (which is usually between the beginning of March and the end of August). If this is not possible then vegetation can be cleared only after being checked for nesting birds by a suitably qualified ecologist up to 24 hours before the start of works. If any active nests are found, work must stop, and a 5 m buffer must be erected around the nest to protect it from disturbance until after the birds have fledged and left the nest.

Any excavations or open pipes will need to be covered at night, or provided with a small animal escape ramp (a rough board at a shallow angle) to allow animals to escape if they fall in. If animals are found on site, they should not be handled but must be allowed to move away to safety on their own.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
