SUMARY FOR INPUT DATA FOR New Build (As Built)

Criterion 1 – Achieving the TER and TFEE rate

1a TER and DER

Fuel for main heating	Mains gas		
Fuel factor	1.00 (mains gas)		
Target Carbon Dioxide Emission Rate (TER)	16.22	$kgCO_2/m^2$	
Dwelling Carbon Dioxide Emission Rate (DER)	12.56	$kgCO_2/m^2$	Pass
	-3.66 (-22.6%)	$kgCO_2/m^2$	

1b TFEE and DFEE

Target Fabric Energy Efficiency (TFEE)	49.73	$kWh/m^2/yr$	
Dwelling Fabric Energy Efficiency (DFEE)	43.82	$kWh/m^2/yr$	
	-5.9 (-11.9%)	$kWh/m^2/yr$	Pass

Criterion 2 – Limits on design flexibility

Limiting Fabric Standards

2 Fabric U-values

Element	Average	Highest	
External wall	0.26 (max. 0.30)	0.27 (max. 0.70)	Pass
Party wall	0.00 (max. 0.20)	-	Pass

SUMARY FOR INPUT DATA FOR New Build (As Built)

Criterion 1 – Achieving the TER and TFEE rate

1a TER and DER

Fuel for main heating	Mains gas		
Fuel factor	1.00 (mains gas)		
Target Carbon Dioxide Emission Rate (TER)	16.57	$kgCO_2/m^2$	
Dwelling Carbon Dioxide Emission Rate (DER)	11.72	$kgCO_2/m^2$	Pass
	-4.85 (-29.3%)	$kgCO_2/m^2$	

1b TFEE and DFEE

Target Fabric Energy Efficiency (TFEE)	40.64	$kWh/m^2/yr$	
Dwelling Fabric Energy Efficiency (DFEE)	36.12	$kWh/m^2/yr$	
	-4.5 (-11.1%)	$kWh/m^2/yr$	Pass

Criterion 2 – Limits on design flexibility

Limiting Fabric Standards

2 Fabric U-values

Element	Average	Highest	
External wall	0.26 (max. 0.30)	0.27 (max. 0.70)	Pass
Openings	1.33 (max. 2.00)	1.50 (max. 3.30)	Pass

2a Thermal bridging

Thermal bridging calculated from linear thermal transmittances for each junction

3 Air permeability

Air permeability at 50 pascals	3.22 (measured in this dwelling)	
Maximum	10.0	Pass

Limiting System Efficiencies

4 Heating efficiency

Main heating system	Boiler system with radiators or underfloor - Mains gas Data from database Baxi ASSURE 36 COMBI Combi boiler Efficiency: 89.0% SEDBUK2009 Minimum: 88.0%	Pass
Secondary heating system	None	

5 Cylinder insulation

Hot water storage	No cylinder		

6 Controls

Space heating controls	Time and temperature zone control		Pass
Hot water controls	No cylinder		
Boiler interlock	Yes		Pass

7 Low energy lights

Percentage of fixed lights with low-energy fittings	100	%	
Minimum	75	%	Pass

8 Mechanical ventilation

Not applicable

Criterion 3 – Limiting the effects of heat gains in summer

9 Summertime temperature

Overheating risk (Southern England)	Not significant	Pass

Based on:

Overshading	Average
Windows facing North East	1.86 m², No overhang
Windows facing East	7.04 m², No overhang
Windows facing West	2.01 m², No overhang
Air change rate	6.00 ach
Blinds/curtains	Dark-coloured curtain or roller blind, closed 10% of daylight hours

Criterion 4 – Building performance consistent with DER and DFEE rate

Air permeability and pressure testing

3 Air permeability

Air permeability at 50 pascals	3.22 (measured in this dwelling)		
Maximum	10.0		Pass

10 Key features

Air permeability	3.2	m³/m²h
Photovoltaic array	0.73	kW

SUMARY FOR INPUT DATA FOR New Build (As Built)

Criterion 1 – Achieving the TER and TFEE rate

1a TER and DER

Fuel for main heating	Mains gas		
Fuel factor	1.00 (mains gas)		
Target Carbon Dioxide Emission Rate (TER)	18.91	$kgCO_2/m^2$	
Dwelling Carbon Dioxide Emission Rate (DER)	15.73	$kgCO_2/m^2$	Pass
	-3.18 (-16.8%)	$kgCO_2/m^2$	

1b TFEE and DFEE

Target Fabric Energy Efficiency (TFEE)	52.93	$kWh/m^2/yr$	
Dwelling Fabric Energy Efficiency (DFEE)	46.56	$kWh/m^2/yr$	
	-6.3 (-11.9%)	$kWh/m^2/yr$	Pass

Criterion 2 – Limits on design flexibility

Limiting Fabric Standards

2 Fabric U-values

Element	Average	Highest	
External wall	0.26 (max. 0.30)	0.27 (max. 0.70)	Pass
Floor	0.19 (max. 0.25)	0.19 (max. 0.70)	Pass
Openings	1.33 (max. 2.00)	1.50 (max. 3.30)	Pass

2a Thermal bridging

Thermal bridging calculated from linear thermal transmittances for each junction

3 Air permeability

Air permeability at 50 pascals	3.06 (measured in this dwelling)	
Maximum	10.0	Pass

Limiting System Efficiencies

4 Heating efficiency

Main heating system	Boiler system with radiators or underfloor - Mains gas Data from database Baxi ASSURE 36 COMBI Combi boiler Efficiency: 89.0% SEDBUK2009 Minimum: 88.0%	Pass
Secondary heating system	None	

5 Cylinder insulation

Hot water storage	No cylinder	

6 Controls

Space heating controls	Time and temperature zone control	Pass
Hot water controls	No cylinder	
Boiler interlock	Yes	Pass

7 Low energy lights

Percentage of fixed lights with low-energy fittings	100	%	
Minimum	75	%	Pass

8 Mechanical ventilation

Criterion 3 – Limiting the effects of heat gains in summer

9 Summertime temperature

Overheating risk (Southern England)	Not significant	Pass

Based on:

Overshading	Average
Windows facing North East	1.86 m², No overhang
Windows facing East	6.44 m², No overhang
Windows facing West	3.31 m², No overhang
Air change rate	6.00 ach
Blinds/curtains	Dark-coloured curtain or roller blind, closed 10% of daylight hours

Criterion 4 – Building performance consistent with DER and DFEE rate

Air permeability and pressure testing

3 Air permeability

Air permeability at 50 pascals	3.06 (measured in this dwelling)	
Maximum	10.0	Pass

10 Key features

Thermal bridging y-value	0.034	W/m²K
Air permeability	3.1	m³/m²h
Photovoltaic array	0.37	kW

SUMARY FOR INPUT DATA FOR New Build (As Built)

Criterion 1 – Achieving the TER and TFEE rate

1a TER and DER

Fuel for main heating	Mains gas		
Fuel factor	1.00 (mains gas)		
Target Carbon Dioxide Emission Rate (TER)	19.82	$kgCO_2/m^2$	
Dwelling Carbon Dioxide Emission Rate (DER)	13.49	$kgCO_2/m^2$	Pass
	-6.33 (-31.9%)	$kgCO_2/m^2$	

1b TFEE and DFEE

Target Fabric Energy Efficiency (TFEE)	49.06	$kWh/m^2/yr$	
Dwelling Fabric Energy Efficiency (DFEE)	44.09	$kWh/m^2/yr$	
	-5.0 (-10.2%)	$kWh/m^2/yr$	Pass

Criterion 2 – Limits on design flexibility

Limiting Fabric Standards

Criterion 3 – Limiting the effects of heat gains in summer

9 Summertime temperature

Overheating risk (Southern England)	Not significant	Pass

Based on:

Overshading	Average
Windows facing North	1.08 m², No overhang
Windows facing East	4.58 m², No overhang
Windows facing South	1.08 m², No overhang
Windows facing West	2.01 m², No overhang
Air change rate	6.00 ach
Blinds/curtains	Dark-coloured curtain or roller blind, closed 10% of daylight hours

Criterion 4 – Building performance consistent with DER and DFEE rate

Party Walls

Type	U-value		
Filled Cavity with Edge Sealing	0.00	W/m²K	Pass

Air permeability and pressure testing

3 Air permeability

Air permeability at 50 pascals	4.46 (measured in this dwelling)

SUMARY FOR INPUT DATA FOR New Build (As Built)

Criterion 1 – Achieving the TER and TFEE rate

1a TER and DER

Fuel for main heating	Mains gas		
Fuel factor	1.00 (mains gas)		
Target Carbon Dioxide Emission Rate (TER)	20.23	$kgCO_2/m^2$	
Dwelling Carbon Dioxide Emission Rate (DER)	13.87	$kgCO_2/m^2$	Pass
	-6.36 (-31.4%)	$kgCO_2/m^2$	

1b TFEE and DFEE

Target Fabric Energy Efficiency (TFEE)	53.68	$kWh/m^2/yr$	
Dwelling Fabric Energy Efficiency (DFEE)	46.49	$kWh/m^2/yr$	
	-7.2 (-13.4%)	$kWh/m^2/yr$	Pass

Criterion 2 – Limits on design flexibility

Limiting Fabric Standards

2 Fabric U-values

Element	Average	Highest	
External wall	0.27 (max. 0.30)	0.27 (max. 0.70)	Pass
Party wall	0.00 (max. 0.20)	-	Pass
Floor	0.18 (max. 0.25)	0.18 (max. 0.70)	Pass
Roof	0.16 (max. 0.20)	0.16 (max. 0.35)	Pass
Openings	1.33 (max. 2.00)	1.50 (max. 3.30)	Pass

2a Thermal bridging

Thermal bridging calculated from linear thermal transmittances for each junction

3 Air permeability

Air permeability at 50 pascals	4.38 (measured in this dwelling)	
Maximum	10.0	Pass

Limiting System Efficiencies

4 Heating efficiency

Main heating system	Boiler system with radiators or underfloor - Mains gas Data from database Baxi ASSURE 530 COMBI 2 Combi boiler Efficiency: 89.4% SEDBUK2009 Minimum: 88.0%		Pass
Secondary heating system	None		

5 Cylinder insulation

Hot water storage	No cylinder		

6 Controls

Space heating controls	Time and temperature zone control		Pass
Hot water controls	No cylinder		
Boiler interlock	Yes		Pass

7 Low energy lights

Percentage of fixed lights with low-energy fittings	100	%	
Minimum	75	%	Pass

8 Mechanical ventilation

Not applicable

Criterion 3 – Limiting the effects of heat gains in summer

9 Summertime temperature

Overheating risk (Southern England)	Not significant		Pass

Based on:

Overshading	Average		
Windows facing North Windows facing East Windows facing South Windows facing West	1.08 m², No overhang 4.14 m², No overhang 2.94 m², No overhang 3.59 m², No overhang		
Air change rate	8.00 ach		
Blinds/curtains	Dark-coloured curtain or roller blind, closed 10% of daylight hours		

Criterion 4 – Building performance consistent with DER and DFEE rate

Party Walls

Type	U-value		
Filled Cavity with Edge Sealing	0.00	W/m²K	Pass

Air permeability and pressure testing

3 Air permeability

Air permeability at 50 pascals	4.38 (measured in this dwelling)		
Maximum	10.0		Pass

10 Key features

Party wall U-value	0.00	W/m²K
Thermal bridging y-value	0.039	W/m²K
Photovoltaic array	0.73	kW

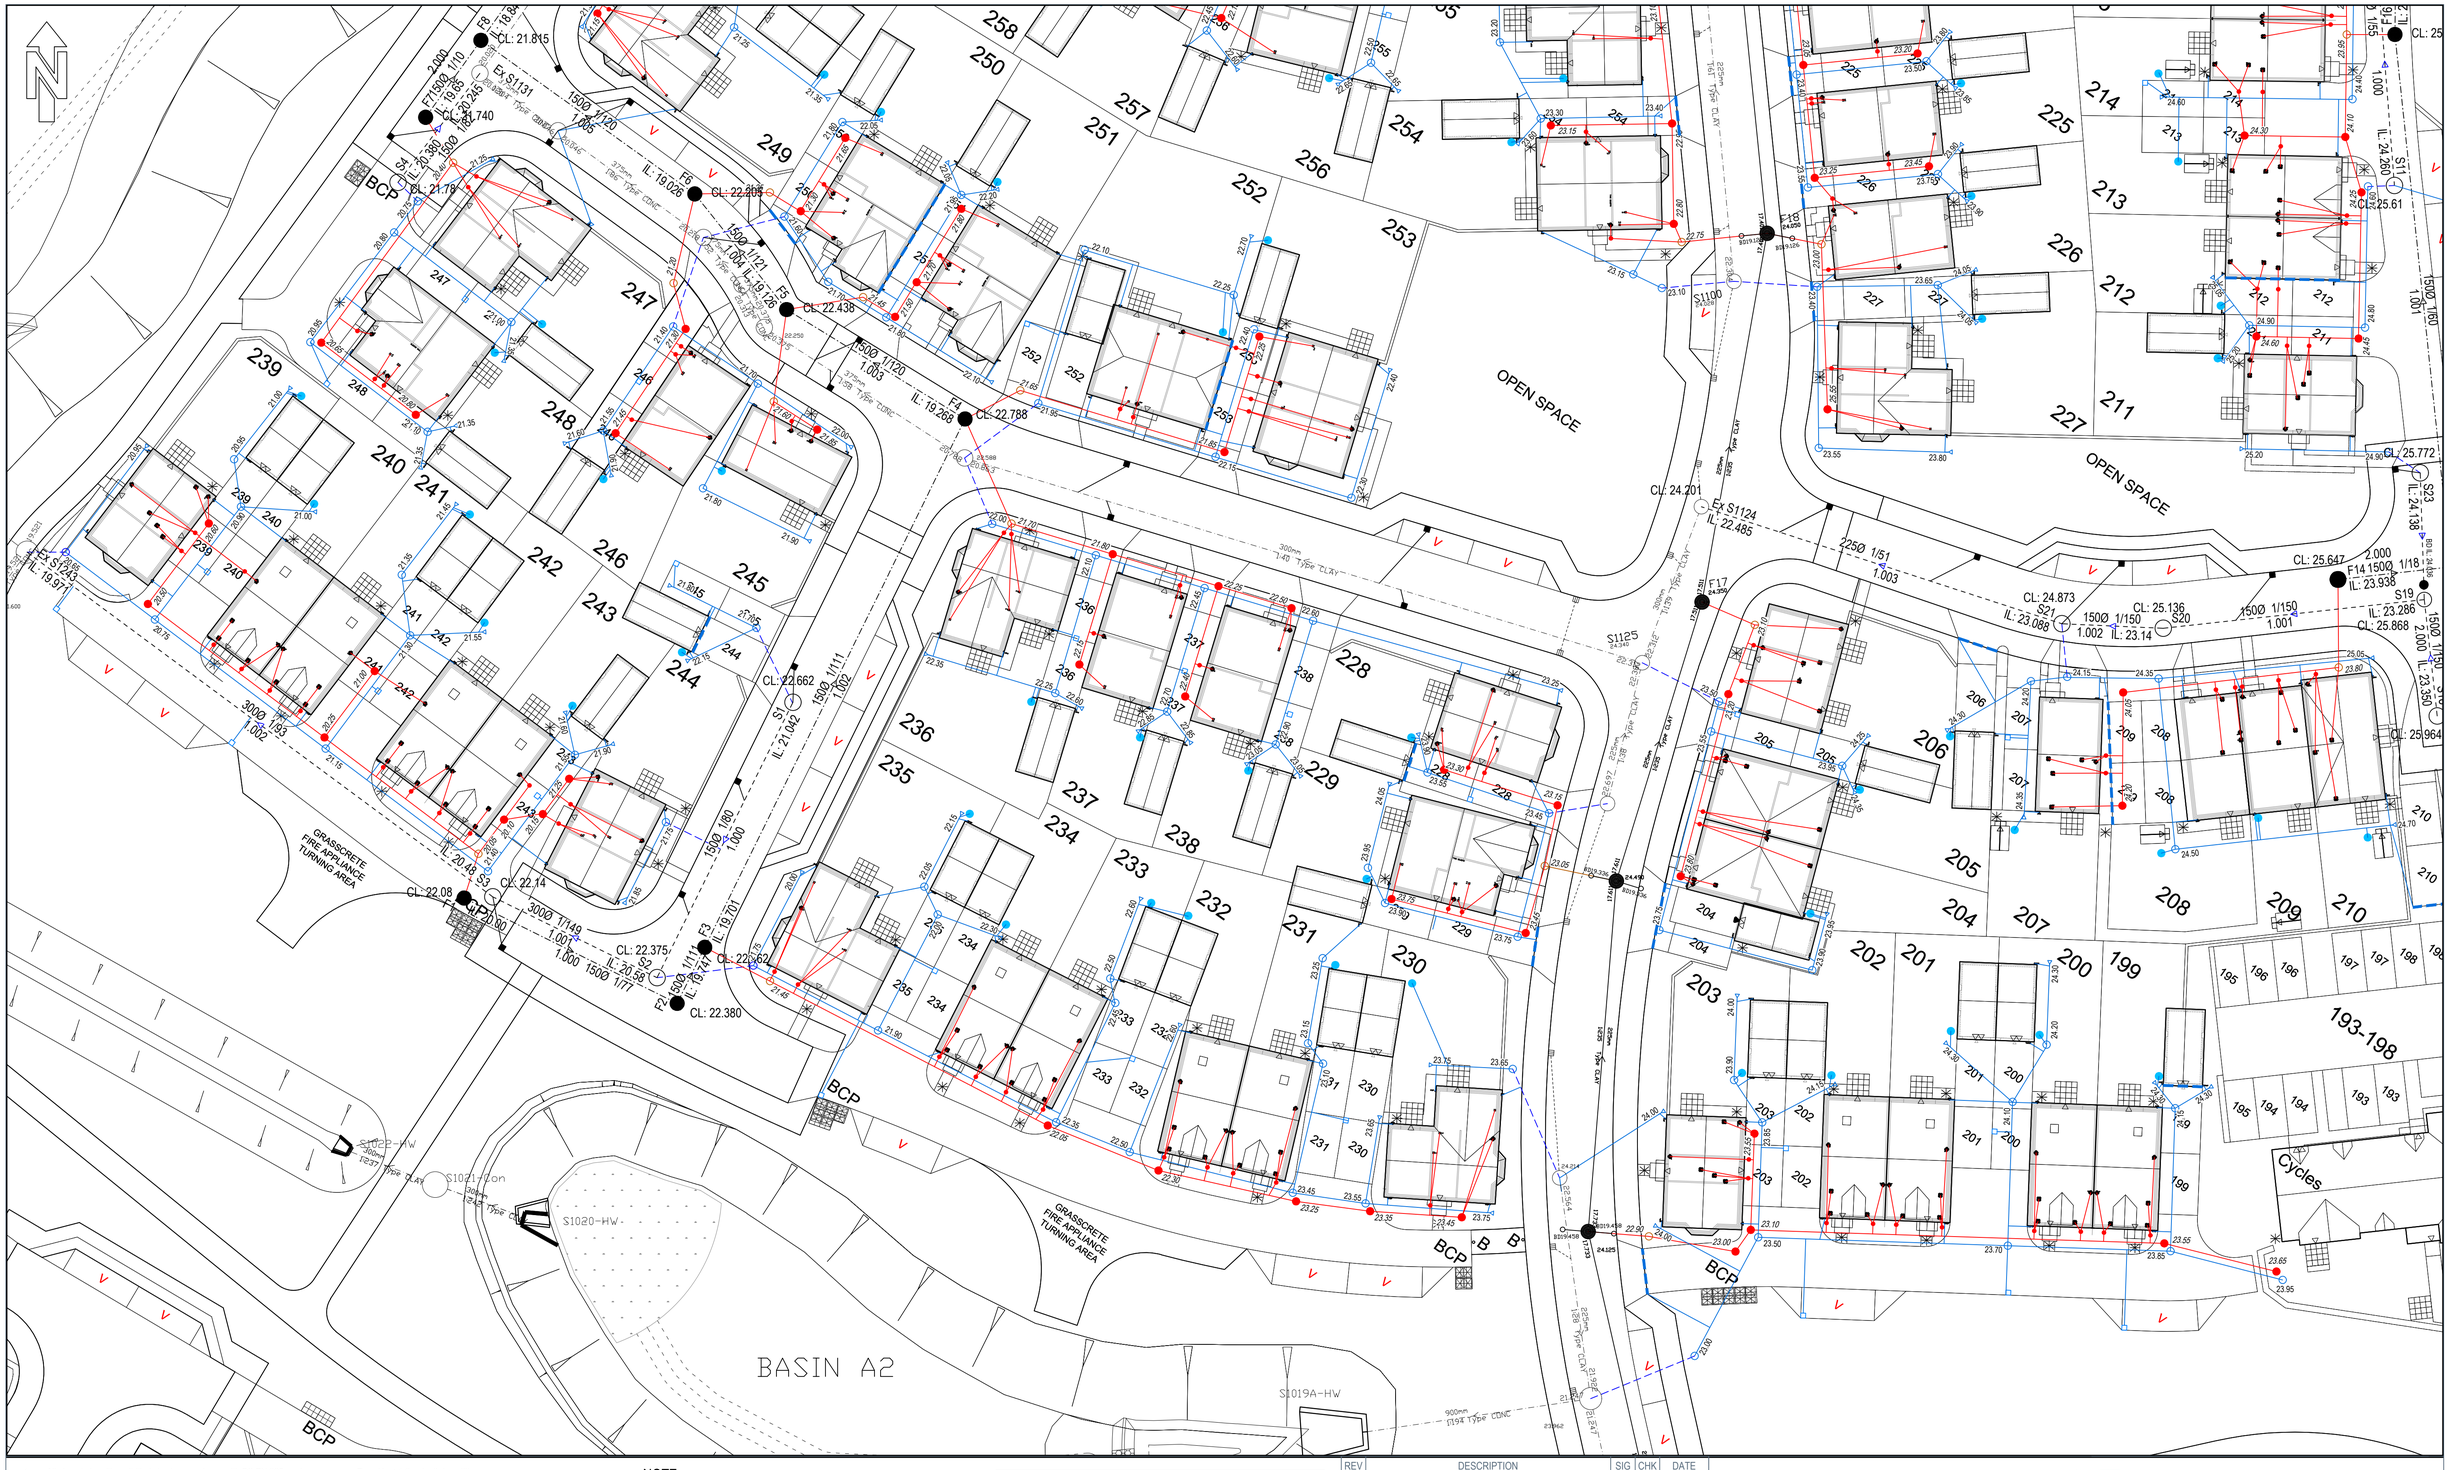
APPENDIX D – WATER BUTT LOCATION PLAN



1. All pipes to be either vitrified clay in accordance with BS EN 295, and having a crushing strength of 40kN/m, or class 120 concrete (54kN/m min) to BS 5911, bedded on a class B granular bed and haunch, or Polysewer or similar bedded on a class S granular bed and surround. Where pipes are in the public highway they are to be bedded on a class S granular bed and surround.
2. If the cover to the pipe is less than 600mm a class Z concrete bed and surround must be used.
3. All trenches in roads, paved areas and below slabs shall be backfilled with Type 1 or Type 2 DOT granular sub-base material.
4. All pipes to be laid soffit to soffit at manholes unless noted otherwise.
5. All insitu concrete to be designated mix FND2 conforming to BS 8500-2 unless agreed otherwise.
6. All private drainage to be 100mm diameter unless otherwise stated.
7. Demarcation chamber types;
   Type G = <1.2m depth to soffit
   Type H = >1.2m depth to soffit
8. Minimum gradients:
   Foul Water 1/80,
   Storm Water 1/100
9. All surface water connecting pipes to be 150mm diameter minimum and all foul water connecting pipes to be 150mm diameter minimum to adoptable drains unless noted otherwise.
10. All rainwater pipes must be fitted with a roddable access above ground.
11. All private drainage to be installed in accordance with Part H of the Building Regulations and BS EN 752 & 12056.
12. High velocity discharges e.g. discharge from SVP's should use the main channel when connected to inspection chambers wherever practicable. Chambers to be orientated to suit.
13. Refer to manufacturers instructions for installation details

NOTE

ADDITIONAL CHAMBERS & INSPECTION POINTS MAY BE REQUIRED TO SUIT MANUFACTURERS DETAILS AND/OR CONTRACTORS PREFERRED METHOD OF WORKING. SHOULD THE DESIGN ALTER SIGNIFICANTLY, CONTACT SHOULD BE MADE WITH THE ENGINEER.

For Construction
These drawings are produced, together with any related data, to inform the setting out and construction of the works. To be read in conjunction with all working drawings.

NOTES

1. Drawing based on Topographical Survey by Anthony Brookes Surveys Ltd, drawing number A258/7834/1 dated June 2014.
2. On–site road layout based on AAP Drawing No. P1388.02 Revision ZE dated 5th October 2021.
3. The works shown on this drawing could affect Statutory Undertaker's apparatus and the Contractor is required to verify the location and depth of all such apparatus prior to commencement of the works and to take any precautions necessary when working in the vicinity of any such apparatus.
4. All adoptable highway works to be in accordance with the Hampshire County Council's 'Companion Document to Manual for Streets' and the Specification for Highway Works (SHW) November 2009 as amended published by The Stationery Office.

ADOPTABLE 'MAIN' DRAINAGE KEY

'Phase 3D' foul drainage manhole F8 to connect along sewer alignment between F145/F146 (master drainage). Sewer part constructed based on as built information provided by site (24.10.24). Master drainage design as per drawing S104 adoption plan drawing M434/109 by PFA consulting . Master drainage network offered for adoption under a separate agreement.

Saddle connection to main sewer. IL: 20.147 (150Ø) IL: 19.847 (450Ø)

'Phase 3D' storm drainage to connect into manhole S3032. Master drainage design as per drawing S104 adoption plan ref M434/109 by PFA consulting . Master drainage network offered for adoption under a separate agreement.

Shallow foul drainage. Concrete encasement required to pipes and chambers.

1. All pipes to be either vitrified clay in accordance with BS EN 295, and having a crushing strength of 40kN/m, or class 120 concrete (54kN/m min) to BS 5911, bedded on a class B granular bed and haunch, or Polysewer or similar bedded on a class S granular bed and surround. Where pipes are in the public highway they are to be bedded on a class S granular bed and surround.
2. If the cover to the pipe is less than 600mm a class Z concrete bed and surround must be used.
3. All trenches in roads, paved areas and below slabs shall be backfilled with Type 1 or Type 2 DOT granular sub-base material.
4. All pipes to be laid soffit to soffit at manholes unless noted otherwise.
5. All insitu concrete to be designated mix FND2 conforming to BS 8500-2 unless agreed otherwise.
6. All private drainage to be 100mm diameter unless otherwise stated.
7. Demarcation chamber types:
   Type G = <1.2m depth to soffit
   Type H = >1.2m depth to soffit
8. Minimum gradients:
   Foul Water 1/80, Storm Water 1/100
9. All surface water connecting pipes to be 150mm diameter minimum and all foul water connecting pipes to be 150mm diameter minimum to adoptable drains unless noted otherwise.
10. All rainwater pipes must be fitted with a roddable access above ground.
11. High velocity discharges e.g. discharge from SVP's should use the main channel when connected to inspection chambers wherever practicable. Chambers to be orientated to suit.
12. All private drainage to be installed in accordance with Part H of the Building Regulations and BS EN 752 & 12056.
13. Refer to manufacturers instructions for installation details

NOTE

ADDITIONAL CHAMBERS & INSPECTION POINTS MAY BE REQUIRED TO SUIT MANUFACTURERS DETAILS AND/OR CONTRACTORS PREFERRED METHOD OF WORKING. SHOULD THE DESIGN ALTER SIGNIFICANTLY, CONTACT SHOULD BE MADE WITH THE ENGINEER.

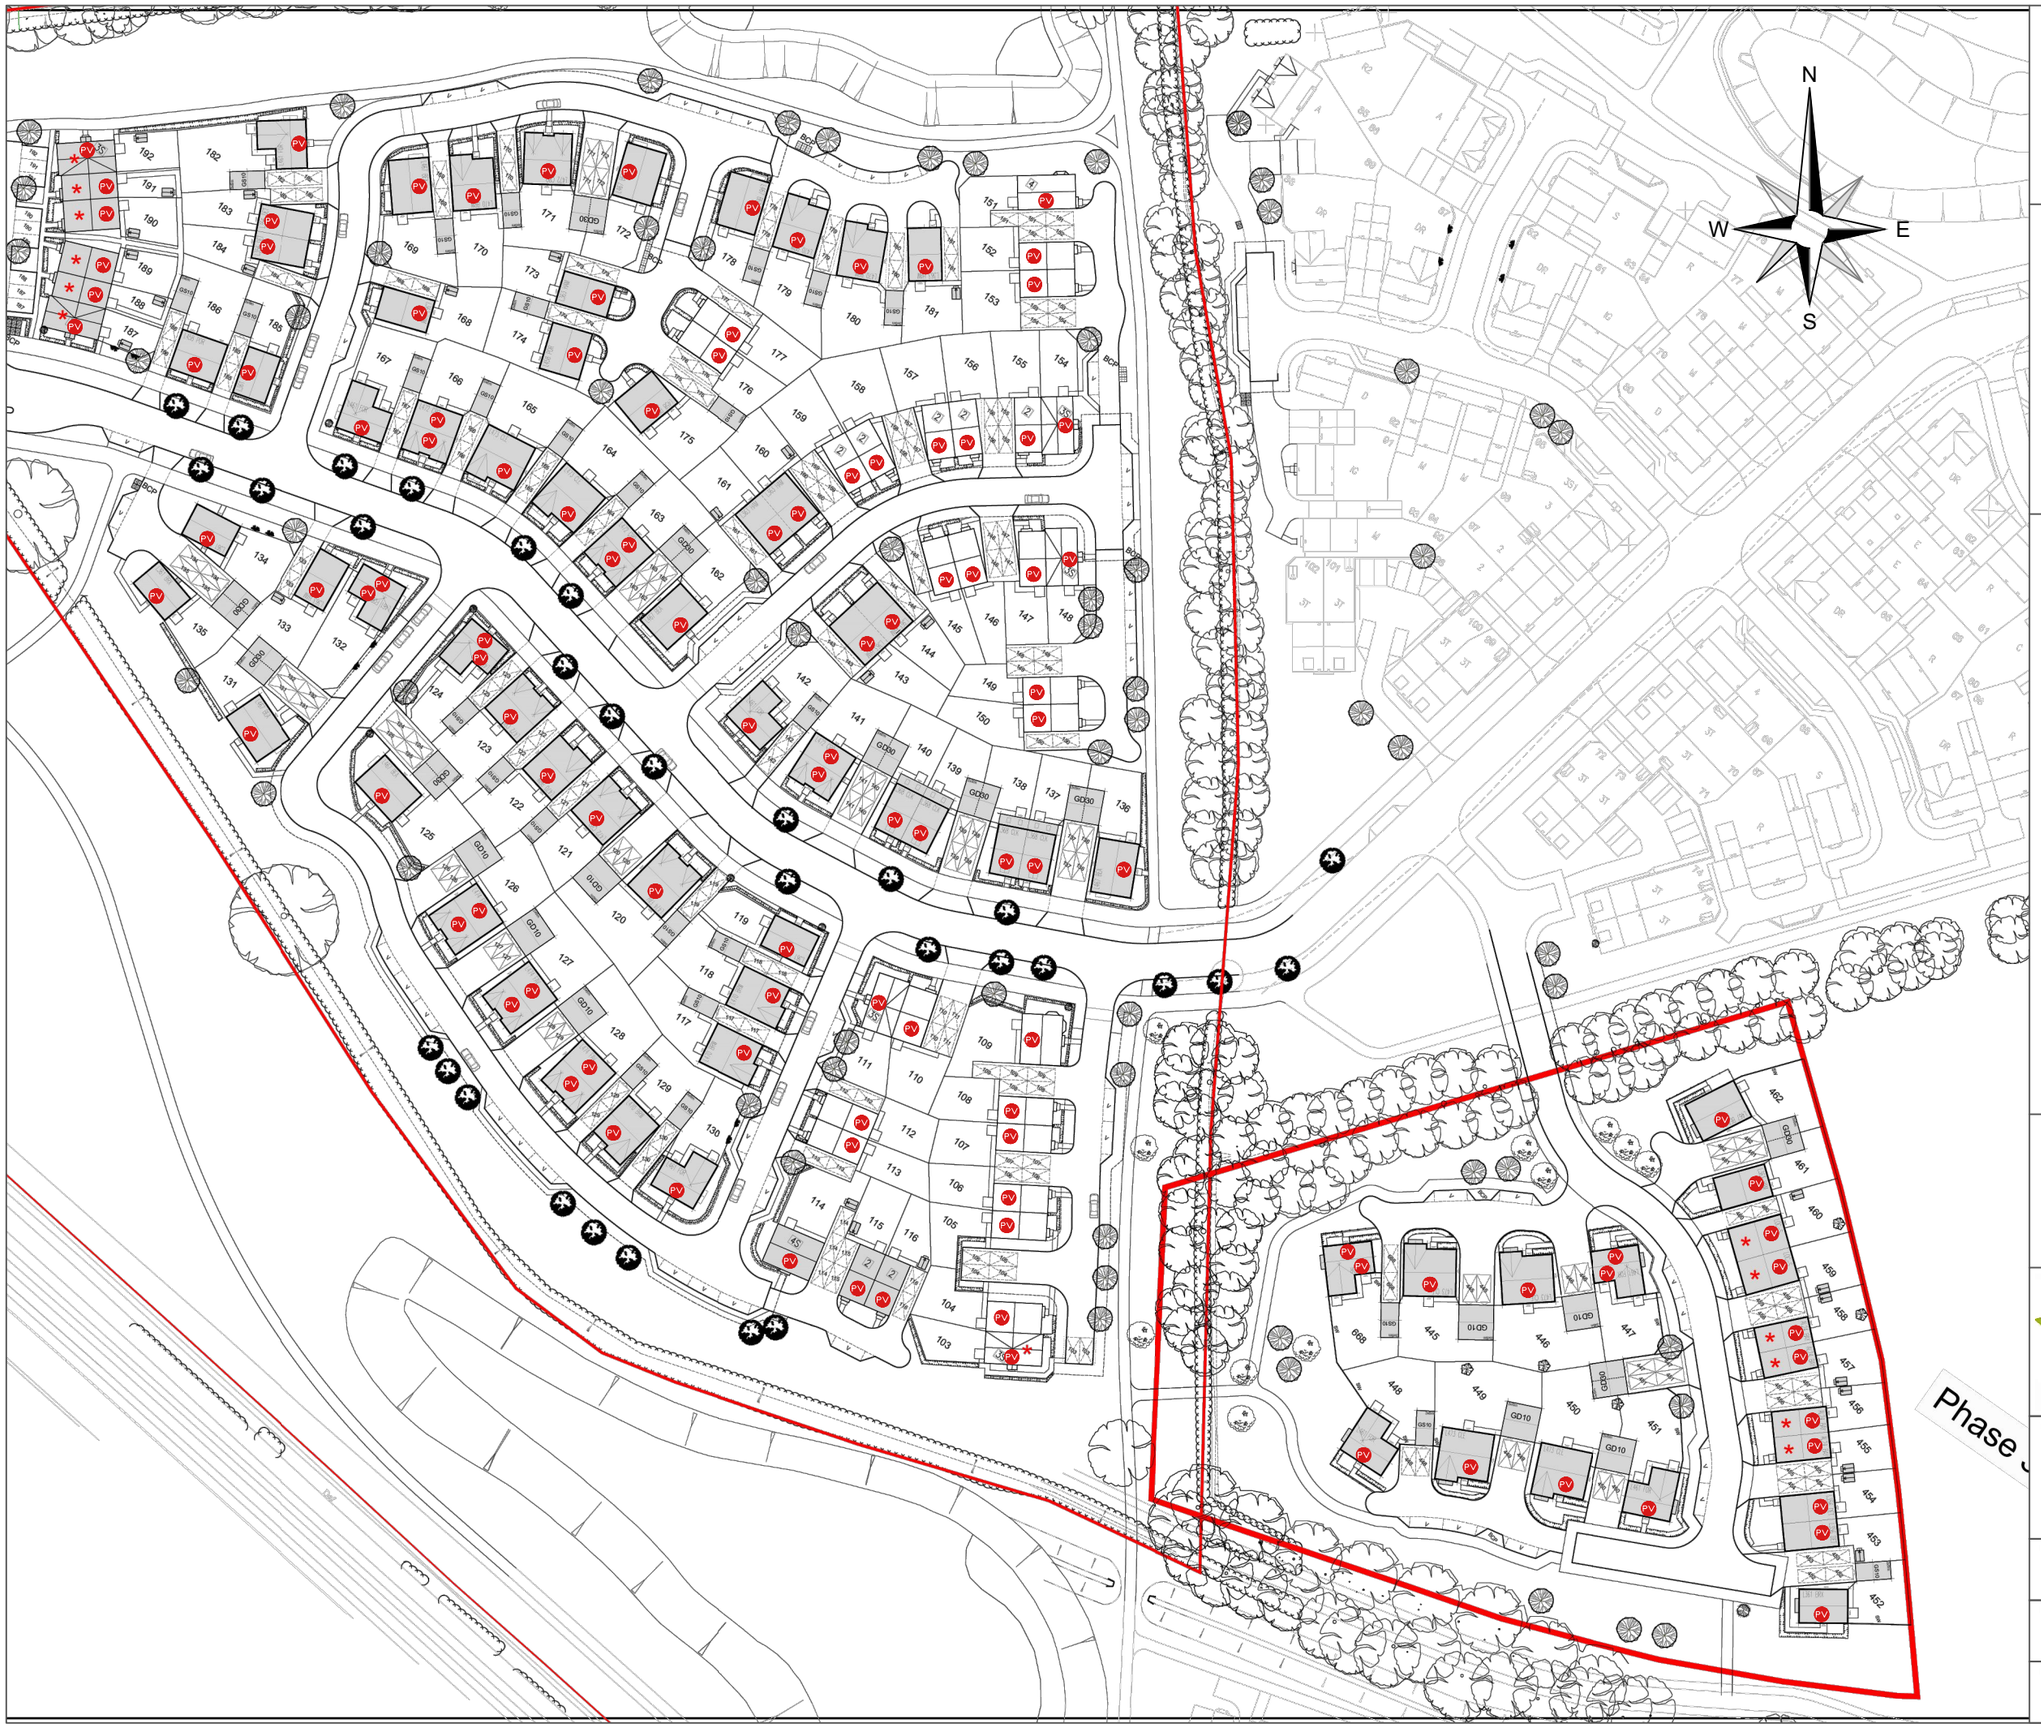
APPENDIX E – DETAILS OF PV AND SITE PLAN OF PV LOCATIONS



Note:
Viridian Solar has produced this design based on information and drawings supplied by the client. It remains the client's responsibility to ensure that shading from nearby buildings and trees does not affect the system.

Weight of solar panels:

PV16-M10	(Fusion PV)	25kg
PV16-G1	(Fusion PV)	22kg

Where the panels are fitted into a pitched tiled/slate roof, they sit directly on the roof battens with a uniformly distributed load of 13kg per m² for PV16. Therefore, they almost certainly weigh less than the roof covering they replace. Roof structure modifications are unlikely to be necessary.

The Performance of solar PV systems is impossible to predict with certainty due to the variability in the amount of solar radiation (sunlight) from location to location and from year to year. This estimate, based upon the MCS procedure, is given as guidance only. It should not be considered as a guarantee of performance.

This system performance calculation has been undertaken using estimated values for array orientation, inclination or shading. Actual performance may be significantly lower or higher if the characteristics of the installed system vary from the estimated results.

1. All Dimensions are in mm.
2. All Dimensions in abeyance and subject to confirmation by HBS NE Limited T/A UPOWA following design.
3. Images are for general information only.
4. HBS NE Limited T/A UPOWA reserve the right to revise this drawing in the interests of system development.
5. Inverters are to be located by the loft hatch on fire board in the loft space to minimise D.C cable runs and therefore minimise D.C losses.
6. Refer to manufacturers details for further product information.
7. This drawing layout does not account for any mansafe, plant, penetrations or miscellaneous equipment not shown.
8. It is the clients responsibility to notify HBS NE Limited T/A UPOWA of anything which may restrict the area available to the system or adjacent structures which would shade the system.

watercolours® by NEOPERL

NEOPERL introduces a consequent colour coding of all aerator models:
"Watercolours by NEOPERL" helps to easily identify

- ▶ the flow rate of the model
- ▶ the stream pattern of the model (aerated or laminar)

The product line and the aerator size can be visually distinguished and thus do not need to be colour-coded.
"Watercolours by NEOPERL" facilitates the production process for the manufacturer and replacement ordering for the end user.

1 Models with restrictor:
colour of the dome screen identifies flow rate

2 PCA®-Models (with flow regulator):
colour of the flow regulator identifies flow rate;

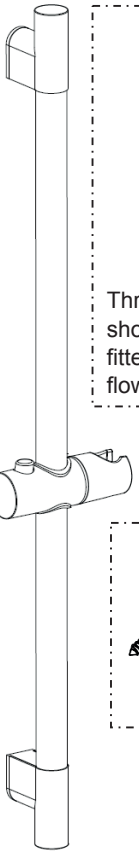
Product overview

This Ecotherm product is an exposed two-hole thermostatically controlled shower, designed to provide the user with comfortable and consistent showering temperatures. This product will provide water from ambient cold up to the pre-set safe maximum temperature.

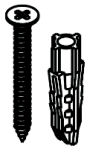
This thermostatic shower mixer is manufactured to the highest standards.

1. PRODUCT BOX CONTENTS



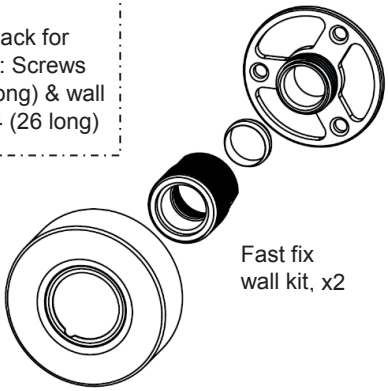
Three function shower handset, fitted with 8 L/min flow regulator

Combined convex strainer & seal, x2



Screw pack for wall kit: Screws x6 (33 long) & wall plugs x6 (Ø6x27 long)

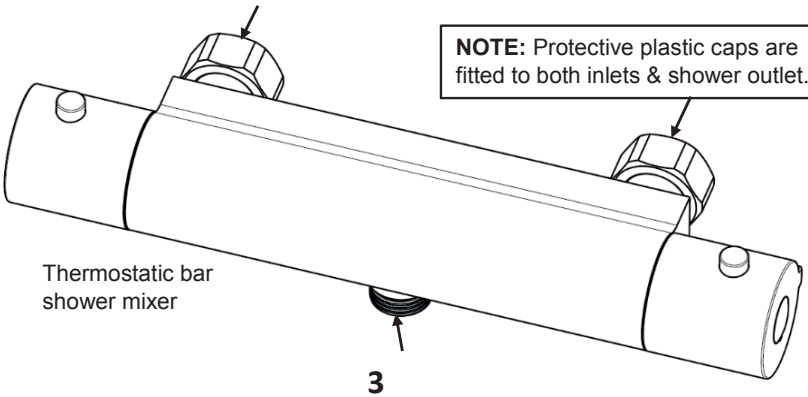
Screw pack for riser rail: Screws x4 (60 long) & wall plugs x4 (26 long)



Fast fix wall kit, x2

Shower hose 1350mm long with 2x seals & protective end caps.

Riser kit, complete with sliding rail bracket & wall mount brackets



NOTE: Protective plastic caps are fitted to both inlets & shower outlet.

3. INTRODUCTION

The fittings covered by these instructions should be installed in accordance with the Water Regulations published in 1999*.
Ideal Standard strongly recommends that these fittings are installed by a professional fitter.

*A guide to the Water Supply (Water Fittings) Regulations 1999 and the Water Byelaws 2000, Scotland is published by WRAS (Water Regulations Advisory Scheme) Unit 13, Willow Road, Pen-y-Fan Industrial Estate, Crumlin, Gwent, NP11 4EG. ISBN 0-9539708-0-9

These thermostatic shower mixers are designed to be installed on normal UK low pressure storage tank fed systems, unvented high pressure systems, modulating instantaneous water heaters or modulating combination (combi) boilers. They are suitable for all pumped applications.

WATER REGULATIONS

Hot and cold water supply pressures must be reasonably balanced and from a common source - both from storage or both from a supply pipe. (IRN 101). This mixer will function within specification on unequal pressures up to a ratio of **2:1**, but it is not recommended that the cold supply be connected to the rising main and hot to the tank fed supply as the pressure differential is likely to exceed the **2:1** ratio.
(See table 1) The minimum pressure for correct operation is **0.2 bar** (2m head). Pressure head is measured as the vertical distance between the bottom of the cold water storage tank which feeds the hot water system and the highest point on the shower spray plate. When installing with a shower pump the use of a secondary tapping from the cylinder is highly recommended.

Figure 1 shows the various methods of connecting the hot water pipe to the cylinder - the most preferred on the left and the least preferred on the right.
The fitting should be so installed as to be readily accessible for examination, repair, replacement or operation. (IRN 111).
The temperature of the hot water must not exceed 85ºC but the installer's attention is drawn to code of practice BS 6700 which recommends that stored hot water should normally never exceed 65ºC. For correct operation of the valve, a minimum of 55ºC is required.

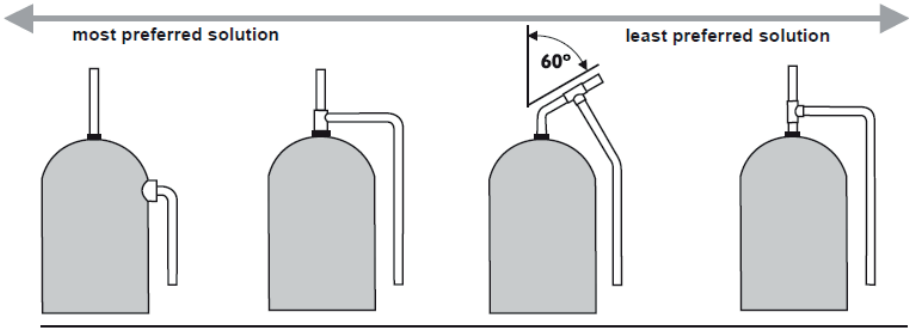

Fig.1
Preferred arrangements for cylinder tapping

Note: If water supply is fed by gravity then supply pressures should be verified to ensure the conditions of use are appropriate for the valve.

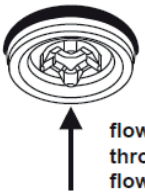
MODULATING COMBI BOILER

This thermostatic shower valve is designed for use with modulating combination boilers.



When installing on a modulating combination boiler it is sometimes possible for the interaction of a thermostatic valve with the combi to cause the boiler to cut out and cut in again. With the result that the water will become alternatively cold and hot. To overcome this, a 4 L/min flow regulator should be fitted upstream of the thermostatic valve. It should be fitted in any 15mm compression fitting in the dedicated cold supply pipe.
It is important to choose a compression fitting located in a position which is accessible after installation and it must be fitted the correct way round for the direction of flow. The regulator can be fitted in either the inlet or outlet side of the compression fitting. If fitting in an outlet side, ensure the o-ring is seated fully in the visible rebate around the edge of the regulator. Use the tip of a small screwdriver or similar to achieve this. Ensure the tail of the pipe is not fouling the regulator (shorten if required) and do up the compression fitting as normal. In a minority of cases, where the boiler is of a type which stores a small quantity of very hot water, it may also be necessary to fit a 4 l/min flow regulator in the hot supply. These can be obtained from Customer Care (A962570NU).

Service valves MUST be fitted to the supply pipes to permit future maintenance. Strainers (mesh filters) are integral to the mixer body.

These should be fitted as close as is practicable to the water supply inlets of the thermostatic shower valve. See section 19 for more details.

Both service valves & strainers should be installed in an easily accessible location.

5. WATER REGULATIONS

CATEGORIES OF RISK

The water regulations published in 1999* take a new approach to backflow in that they look at different categories of risk. The installer must assess the risk from the various categories of fluid in adjacent appliances before determining the level of backflow protection required for a particular installation. **Figures 3 & 4** describe the protection required in various installations.

CATEGORY 3 RISK

Water in a shower tray, basin or bathtub is considered to be a fluid category 3 risk which is a fluid which represents a slight health hazard if it were to find it's way back into the supply pipe. For this reason it must not be possible for any flexible shower head to be able to enter any adjacent washbasin, bath or shower tray unless appropriate protection is employed. **(See Figure 3)**. If it is desired to allow the hand spray to be used inside say a bathtub or a basin it is essential that double check valves be fitted to the inlet on both hot and cold supplies to the thermostatic valve. Alternatively single check valves can be fitted at the inlets and an additional check valve should be fitted in the valve outlet.
No check valves need be fitted if the hand spray is prevented from reaching closer than 25mm of the spill over level of any such fixture.

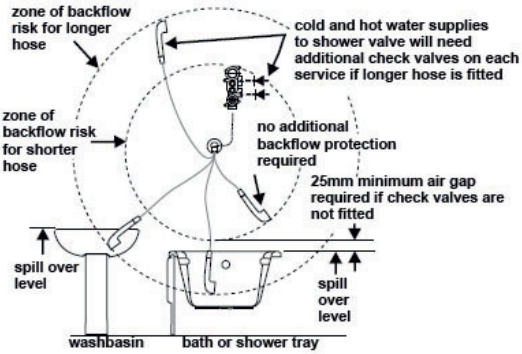


Fig. 3 Backflow risk from a fluid category 3

CATEGORY 5 RISK

Water in a Sink, WC or Bidet is considered to be a fluid category 5 risk which is a fluid which represents a serious health hazard if it were to find it's way back into the supply pipe. For this reason it must not be possible for any flexible shower head to be able to enter any adjacent Sink, WC or Bidet. If the flexible hose to be fitted could reach into any such vessel, the requirements to the system design are so onerous it is better not to fit a flexible. Rather, a fixed overhead showerhead should be considered. **(See Figure 4).**
It will also be seen that this risk could change should the hose be taken out of the restraining device or should a longer replacement hose be fitted at a later date. Installers and householders are advised to take account of these factors when fitting replacement hoses.
For pumped applications the pipe supplying the pump must not in addition supply an ascending spray bidet.

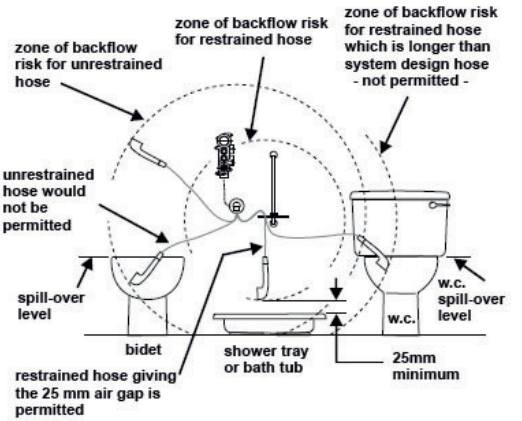

Fig. 4 Backflow risk from a fluid category 5

6. PRE-INSTALLATION NOTES

Product box contents. Ensure you have all the parts shown in section 1.

Product dimensions. Check the dimensions shown in section 2, ensuring the mixer will fit on the intended wall. Plan the fitting location of the shower kit.

Product location. Mixer should be positioned in a suitable location within the showering area. Allow sufficient space around the mixer to permit easy operation of the handles and facilitate easy cleaning. Consider also space to permit cartridge removal for maintenance.

Service Valves. A pair of service valves (for isolating both water supplies) MUST be fitted to permit future maintenance of this product. These should be fitted as close as practicable to the water supply inlets of the mixer & in an easily accessible location. Service valves are no*t* supplied with this product, see section 19.

Supply conditions. Ensure required water supply temperatures & pressures are met. Performance of mixers operating outside these conditions cannot be guaranteed. See section 4.

Mounting. Product is supplied with a pair of wall mount escutcheons. Mixers are intended to be installed on a solid wall or panel. Supply pipes are to be preinstalled at 150mm horizontal centres.

Water Supply Pipes. Both hot & cold water supply pipes should be securely attached to a wall using suitable fixing clips. Supply pipes must be Ø15mm for the fixing kit supplied.

Flow regulation. There are no flow regulators fitted inside the mixer body. The base of the shower hand set has an 8 L/min flow regulator fitted.

Strainers (mesh filters) **& check valves.** Strainers are integral to the inlet seals are intended to protect the check valves from water borne debris. These are fitted inside the inlets of this shower mixer

Shower Kit. This product is supplied with a shower kit. The flexible shower hose from this kit can be screwed onto the G1/2" shower outlet nipple located on the underside of the mixer body. Ensure adequate steps are taken to secure the shower hand set and the arrangements comply with water regulations.

Mixer Controls. The mixer has dual control handles, the right handle allows temperature adjustment of the water, the left handle permits flow control of the mixed water, see section 9.

IMPORTANT: Ensure that any old / existing thermostatic mixing valves (TMVs) that may be fitted in the supply pipes are removed

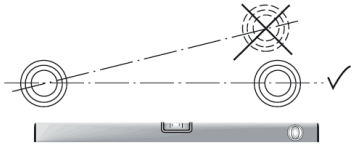
DO NOT apply heat near this product. Heat generated by soldering could damage plastic parts and seals

7. SHOWER VALVE INSTALLATION

The thermostatic mixing valve must be installed in such a position that maintenance of the TMV and its valves and the commissioning and testing of the TMV can be undertaken.

IMPORTANT
BEFORE CONNECTION, FLUSH WATER THROUGH PIPEWORK TO REMOVE ALL DEBRIS ETC. WHICH COULD DAMAGE THE VALVE MECHANISM

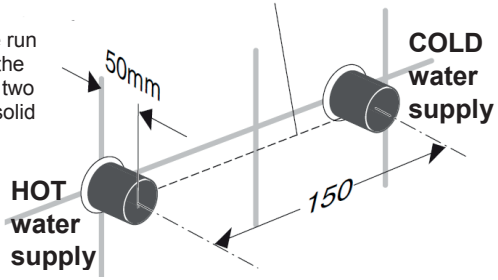
Product is supplied with a pair of wall mount escutcheons. Mixers are intended to be installed on a solid wall or panel. Both hot & cold water supply pipes should be securely attached to a wall using suitable fixing clips.

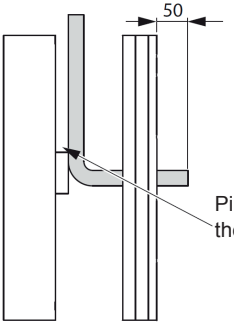


1 **1st fix: pipe installation**

Two 15mm water supply pipes need to be run within the wall cavity at 150mm centres apart to the intended fitting location of the shower mixer. Cut two holes of diameter 20-25mm in the wall board or solid wall. Ensure pipes are level.

During this "first fix" leave 50mm of pipe length protruding from the finished surface (tiles, aqua-board or similar).
Hot supply pipe should be on the left hand side and the cold on the right.



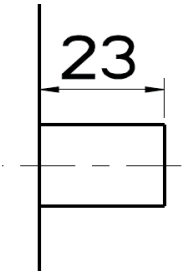


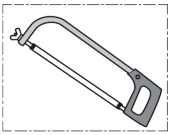
Leave more than 50mm of pipe protruding if the wall is to be tiled. The pipes can be temporarily capped to allow restoration of water supplies for pressure testing of pipe joints etc...

Tile closely to the supply pipes

Pipework should be supported in the cavity, to prevent the pipes slipping backwards during final assembly.

2 When the bar shower is ready to be fitted (after tiling if applicable). Both supply pipes should be trimmed to the final size of 23mm from the finished mounting surface.

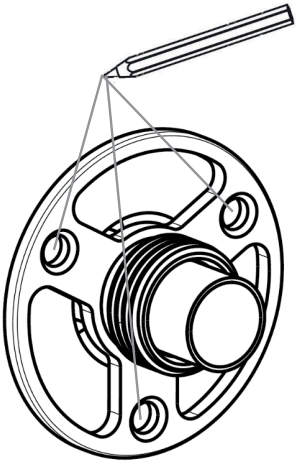


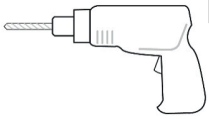


3 Place the mounting brackets over the protruding supply pipes, recheck pipes are still 150mm apart and level.

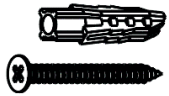
Mark the three screw hole positions through the mounting brackets onto the mounting surface.

Ensure that the positions of the holes will not result in damage to the pipework inside the wall cavity during drilling.

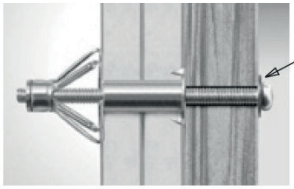


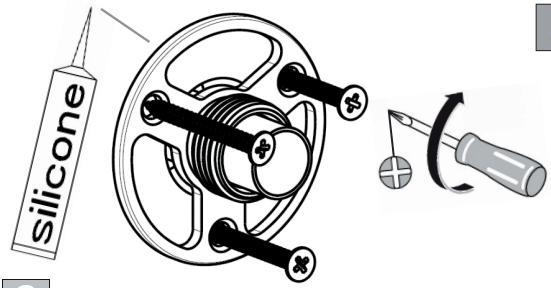


4 Drill holes appropriate for your choice of fixings into the mounting surface. The screws & wall plugs supplied can be used if they are suitable. Tap the wall plugs into the mounting surface until flush.



Note:-For plasterboard duct it will be necessary to fit extra strong cavity anchor plasterboard fixings as shown.



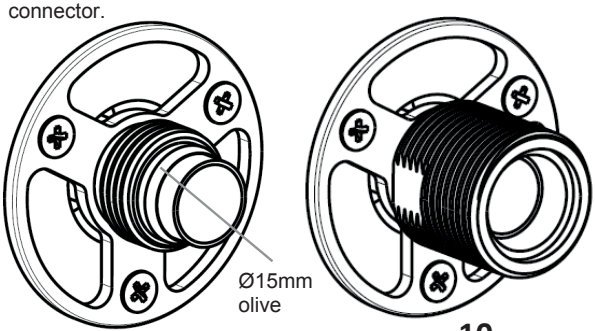


5 Apply a smear of silicone sealant to the rear of the brackets and push them over the pipework.

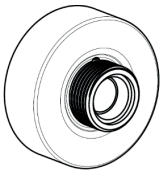
Screw both brackets to the wall. Check that the correct pipe spacing of 150mm has been maintained.

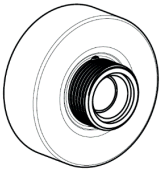
Clean off excess sealant and flush the pipes to remove any trapped debris.

6 Fit the olives to the pipes prior to screwing the two G3/4“connectors into the wall mount plate using an adjustable spanner (23mm on the two flats). The connectors will have to be securely screwed in - to form the necessary compression joint between the olive, wall plate and connector.



NOTE FOR IRELAND: 15mm olives are supplied with this product. Use ½” olives if ½” supply pipes are fitted.

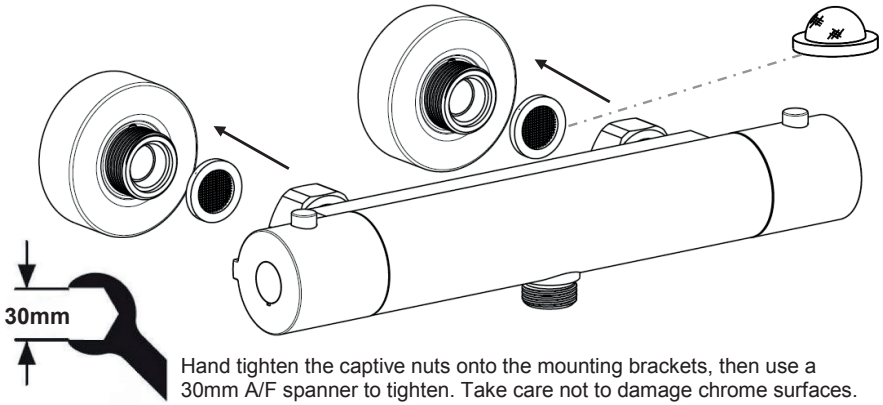




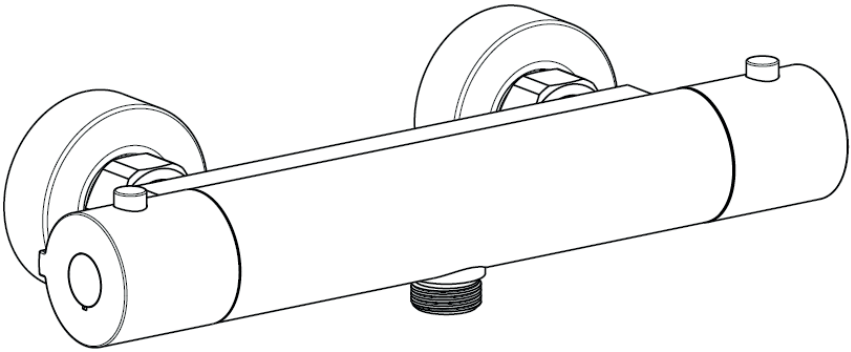
7 When the sealant has set, fit the covers by screwing them onto the adaptors until they are flush with the wall. The covers only need to be hand tight.

8 **NOTE:** First remove the protective plastic caps which are fitted to both inlets & the shower outlet of the mixer

Ensure the sealing washers are placed within the captive nuts of the shower mixer. The domed strainer should point towards the wall .Fit the shower mixer to the mounting bracket as shown.

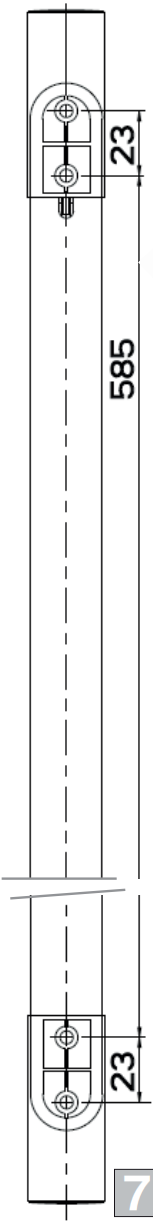


Hand tighten the captive nuts onto the mounting brackets, then use a 30mm A/F spanner to tighten. Take care not to damage chrome surfaces.



9 The shower hose can be screwed onto the outlet projecting from the bottom of the mixer. Ensure the flat seal is fitted inside the hose nut. Turn on the water supplies & check all joints for leaks.

8 RISER KIT INSTALLATION

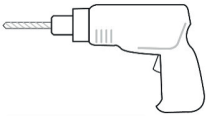


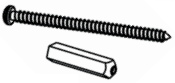
To install the riser rail, it is necessary to screw the upper & lower brackets onto the finished mounting surface at the desired location. Each bracket requires two screws (supplied). The distance between the inner two screws of the mounting brackets is 585mm as shown. The outer screws are then on 23mm centres.

1 Mark all four screw points on the mounting surface. Use a spirit level to check & ensure they are marked vertically. Ensure that the positions of the holes will not result in damage to any pipework inside the wall/cavity.

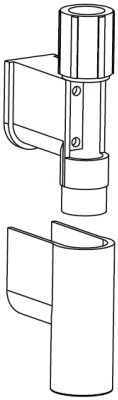
The type of mounting surface (tiled or aqua board etc...) will determine the type fixings to be used. For example on a tiled wall, wall plugs will be required.

2 For solid walls, drill hole sizes appropriate for your choice of fixings. The screws & wall plugs supplied can be used if they are suitable. Tap the wall plugs into the mounting surface until flush.

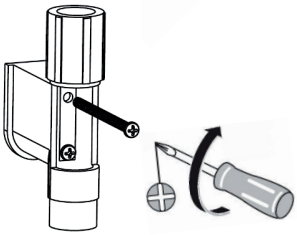




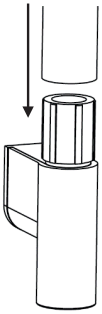
Note: using masking tape can help stop the drill bit from wandering.

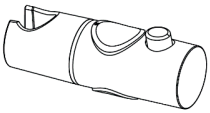


3 Separate the mounting brackets from the chrome covers by sliding apart. Start by fixing the lower bracket first using the fixing screws provided onto the mounting surface. The chrome cover can be replaced.

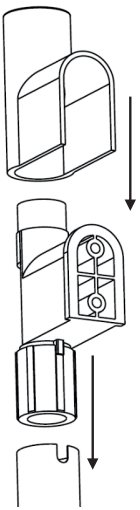


4 Push the riser rail tube (un-notched side) onto the location diameter of the lower bracket.





5 Ensure the sliding bracket for the shower handset is fitted to the riser rail tube. The operating button should be upper most, as shown. Can be left or right handed.

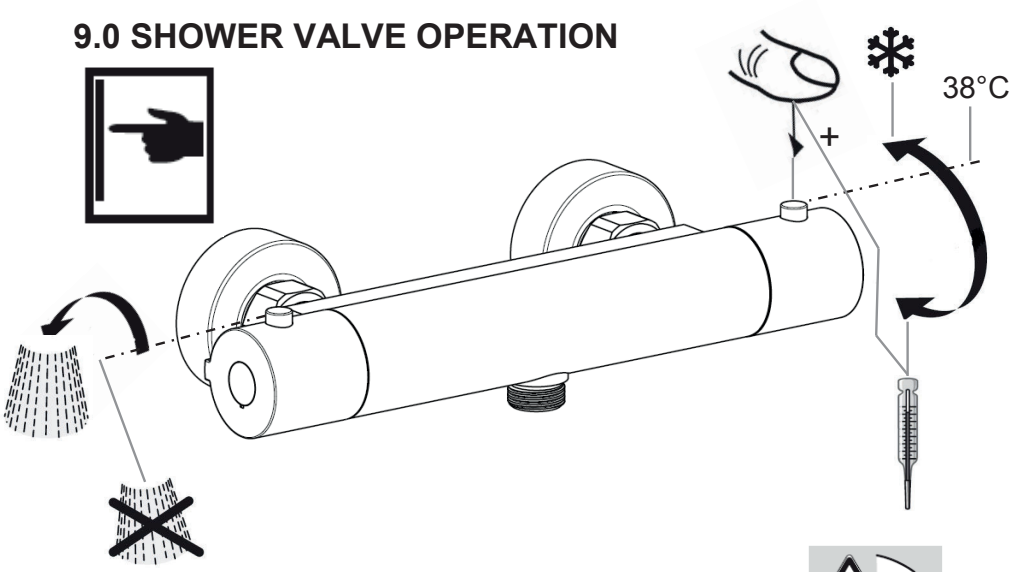


6 Push the location diameter of upper bracket into the riser rail tube. Rotate the riser rail tube until the notch is aligned.

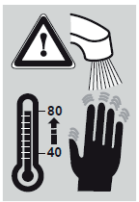
7 Fit the screws into the upper bracket & secure, finally slide the chrome cover over the upper bracket.

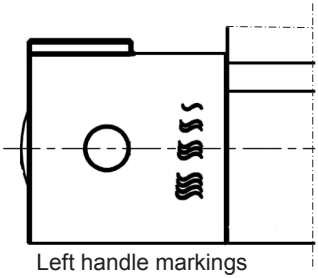
One side of the shower hose should be screwed onto the bottom of the shower handset. The other side should be screwed onto the shower outlet on the underside of the shower valve.

9.0 SHOWER VALVE OPERATION



ATTENTION:
TEMPERATURES HIGHER 40°C CAN BE HARMFUL TO YOUR HEALTH.





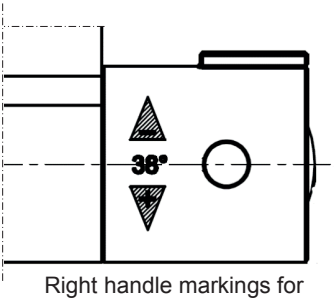
Left handle markings for flow (top view).

Left handle controls water flow rate.

- This handle is shown above parked in the off position.
- Rotating this handle backwards (anti-clockwise) commences water flow. By rotating the handle further backwards to the stop, it will increase the flow to the maximum of the product.
- To turn off the flow, rotate handle upwards up to the top stop.

Right handle controls water temperature.

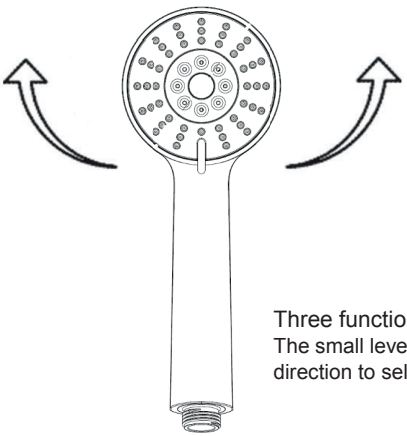
- This handle is shown above parked in the nominal 38°C temperature “stop” position.
- At this temperature “stop” position mixed water is delivered up-to about 38°C.
- To obtain cooler water rotate handle backwards (clockwise).
- To obtain higher water temperature, press the button and then rotate this handle forwards (anti-clockwise).
- After pressing the override button, maximum water temperature available from the mixer is the nominal 44°C pre-set at the factory.

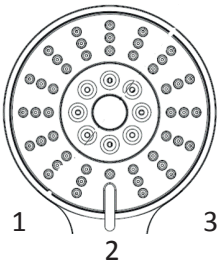


Right handle markings for temperature (top view).

DO NOT FORCE HANDLES BEYOND THE DESCRIBED MOVEMENT RANGES OTHERWISE THIS MAY RESULT IN DAMAGE TO BOTH VALVES AND HANDLES.

9.1 SHOWER HANDSET FUNCTIONS





1. Outer spray.
2. Full spray.
3. Massage.

Three function hand shower
The small lever on the handset can be rotated in either direction to select the different jet-spray patterns.

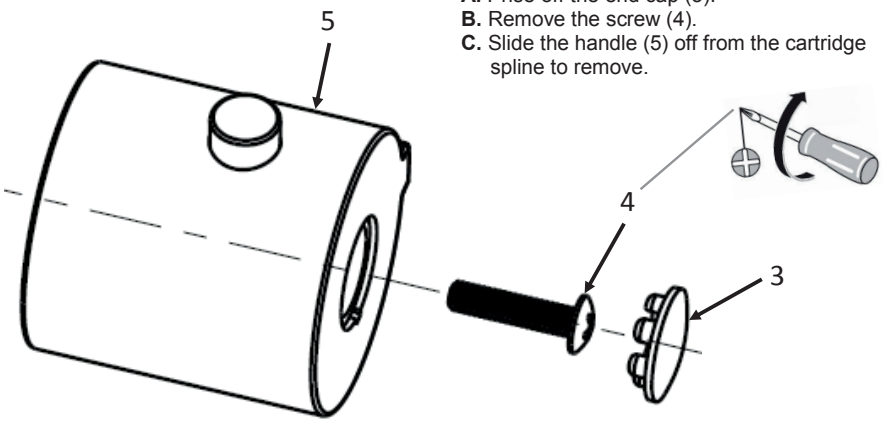
9.2 SHOWER HEIGHT ADJUSTMENT

To adjust the height of the shower handset, simply press & hold the button on the top of the bracket. Slide the bracket along the rail to the desired height & then release the button to lock at this position

10.0 HANDLE REMOVAL

To remove either of the handles

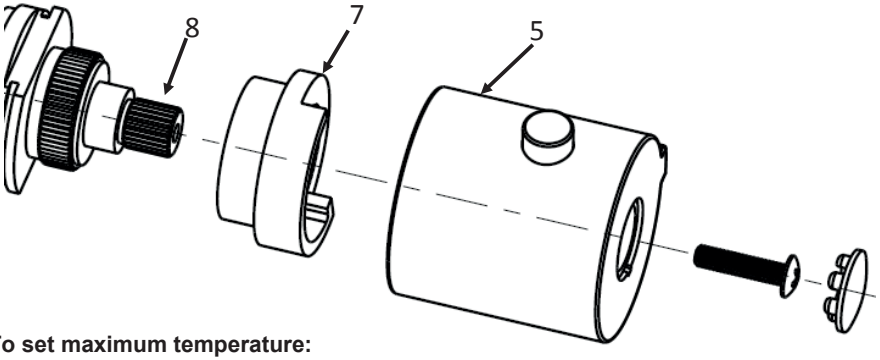
A. Prise off the end cap (3).
B. Remove the screw (4).
C. Slide the handle (5) off from the cartridge spline to remove.



10.1 MAXIMUM TEMPERATURE STOP

Maximum hot water is obtained by pressing the override button & going pass the 38°C marker.

This shower mixer is factory set with the temperature stop at max. 44˚C.If after commissioning, the maximum temperature should be checked & adjusted if necessary.



To set maximum temperature:

A. Remove the temperature handle (5) (right hand side), see section 10.0

B. With the temperature stop (7) still fitted to the cartridge spindle (8) turn the cartridge spindle to adjust the water temperature. Turning anticlockwise will increase the maximum temperature output setting whilst turning the spindle clockwise will decrease it.

C. Refit the handle so the handle-stop meets the right hand side of the stop on the temperature stop.

D. Turn on the flow control handle and wait for a few moments. Test the temperature of the water. Repeat this sequence until maximum desired temperature is achieved.

11. MAINTENANCE

The fitting of isolation valves is required as close as is practicable to the water supply inlets of the thermostatic mixing valve. The thermostatic cartridge seldom fails and the possibility of blocked filters should be investigated before contemplating replacing it. Small particles of debris may still find their way past the strainers to the thermostatic cartridge. These should be cleaned and re-fitted. See section 16 on cartridge replacement.

11.1 Thermostatic Cartridge Ageing

Following many years of normal service you may notice the following:
1. The need to carry out more frequent adjustment of mixed temperature.
2. The thermostatic element may not pass the CWI test.

These issues could be due to the ageing of the thermostat which loses some expansion capability over time.

These are the principle objectives of testing, as they serve to indicate to maintenance staff the declining performance capability of the thermostatic cartridge.

For this reason the audit testing flow chart highlights that 2nd Instance CWI test failure or 2nd instance mixed deviation even with stable ‘as commissioned’ supply conditions and correct inlet supply Δt’s, is potentially the first indication of the need to replace the cartridge.

12. COMMISSIONING & PERIODIC CHECKS

The following procedures should be carried out after installation and every 12 months after to ensure that the valve is functioning correctly.

Check that:

1. The application of the thermostatic valve matches the approved designation.
2. The supply pressures are within the recommended range for the application.
3. The supply temperatures are within the permitted range for the application and comply with the guidance for prevention of Legionella.
4. The mixed temperature is as required for the application.

Record:

5. Each hot and cold supply. (Make a note of the measuring device used).
6. The mixed water temperature at the outlet device.

Isolate:

7. The cold supply to the mixing valve and record the mixed water temperature after about 5 seconds. The temperature should not exceed the value given in table (2) below.

Table 2 A guide to maximum temperature sets

Application	Mixed water temperature	Permitted maximum temperature rise during site testing
Shower	41°C	43°C

Note: *46°C is the maximum mixed water temperature from a bath tap. The maximum temperature takes account of the allowable temperature tolerances inherent thermostatic mixing valves and temperature loss in metal baths.* ***It is not a safe bathing temperature for adults and children.***

The British Burns Association recommends 37°C-37.5°C as a comfortable bathing temperature for Children.
In premises covered by the Care Standards Act 2000, the maximum mixed water temperature is 43°C

13. FREQUENCY OF REGULAR SERVICING

The purpose of servicing regularly is to monitor the performance of changes in system and valve set up. This may require the need to adjust either the supply system or the valve. The product should be checked and tested 12 months after commissioning.

Firstly measure the water temperature at the shower outlet.

Carry out the cold water supply isolation test by isolating the cold water supply to the TMV, wait for 5 seconds if water is still flowing check that the temperature is below 46C. If there is no significant change to the set outlet temperature (+/-2ºC or less change from the original settings) and the fail-safe shut off is functioning, then the valve is working correctly and no further service work is required.

Notes:
A residual flow is permitted during the commissioning or the annual verification (cold water supply isolation test), then this is acceptable providing the water temperature is no more than 2ºC above the designated outlet temperature.

Temperature readings should be taken at the normal flow rate after allowing for the system to stabilize.

The sensing part of the thermometer probe must be fully submerged in the water that is to be tested.

Any TMV that has been adjusted or serviced must be re-commissioned and retested in accordance with the instructions detailed above.

14. COLD WATER ISOLATION (CWI) TEST

CWI test is a guide to showing the performance of the thermostat.

Prior to CWI test:

- Make sure the supply temperatures are within the ranges 55 to 65°C for hot, & 5 to 20°C for cold.

To perform a CWI test:

- Turn the product on using the flow handle, & rotate handle to max, giving 100% flow.
- The temperature handle should be positioned such that it gives 40°C to the outlet.

1. Record the steady state temperature of both hot and cold water supplies. Note the Δt.
2. Record the temperature of the mixed water at the outlet (preferably unscrew the shower hand set) should be within range 40±1°C.
3. Isolate the cold water supply (using inline service valve).

If the flow ceases, CWI test passed. An ongoing reduced fine flow of water (pencil stream) from the mixed water outlet is also acceptable as a pass.
Restore the cold supply & recheck the temperature at the mixed water outlet once stabilised.

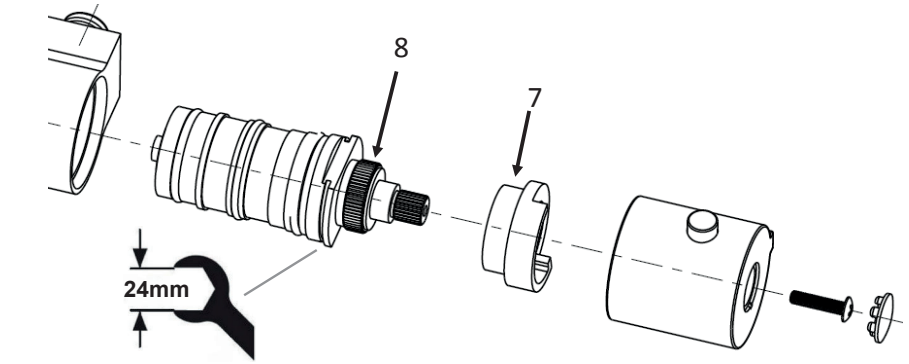
If the flow has not reduced, the product has failed the CWI test. Product requires maintenance, cartridge should be removed, cleaned & retested.
Additionally, clean all filters, ensure check valves are working, and make sure all isolating valves are fully open.

15. HANDY MAINTENANCE TIPS

Here are a few handy tips which may be helpful when dismantling the mixer for maintenance or repair:

- Isolate both HOT & COLD water supplies first. Use the inline service valves fitted.
- Fully open the flow handle. Unscrew the shower hose from the underside of the product. This will permit water drain down mixer & release water pressure from the outlet.
- Use correct size tools. Take care not to damage chromed surfaces.
- When unscrewing cartridges, expect some trapped water to escape from the mixer.
- Clean all parts before refitting, especially strainers (mesh filters).
- Ensure parts are re-assembled in the correct ‘reverse’ sequence.
- Observe torque settings, where specified.
- Restore both water supplies. Refit shower hose.
- Check all joints for leaks upon completion.
- Run water through the mixer for a few seconds to purge-out any trapped air.

16. THERMOSTATIC CARTRIDGE REPLACEMENT



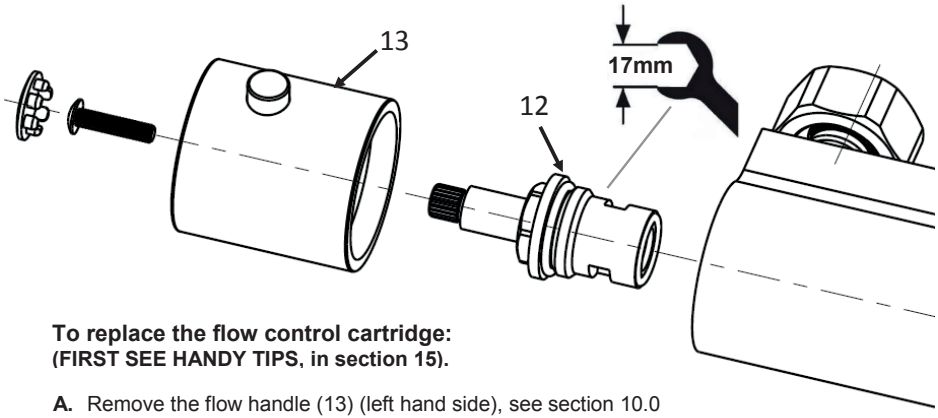
This thermostatic cartridge is protected from water borne debris by mesh filter screens. These should be checked and cleaned before contemplating replacing the cartridge.

To replace the thermostatic cartridge: (FIRST SEE HANDY TIPS, in section 15).

A. Remove the temperature handle (right hand side), see section 10.0
B. Slide off the temperature stop (7) from the cartridge spline. This will expose the thermostatic cartridge (8).
C. Unscrew the cartridge with 24mm A/F spanner and replace if necessary.

To clean the screens remove the O-rings. The screens will then slide off.
When clean replace the screens. The O-rings should be lightly greased with a WRAS approved silicone grease (e.g. Klueber Unisilikon GBU2).

17. FLOW CARTRIDGE REPLACEMENT

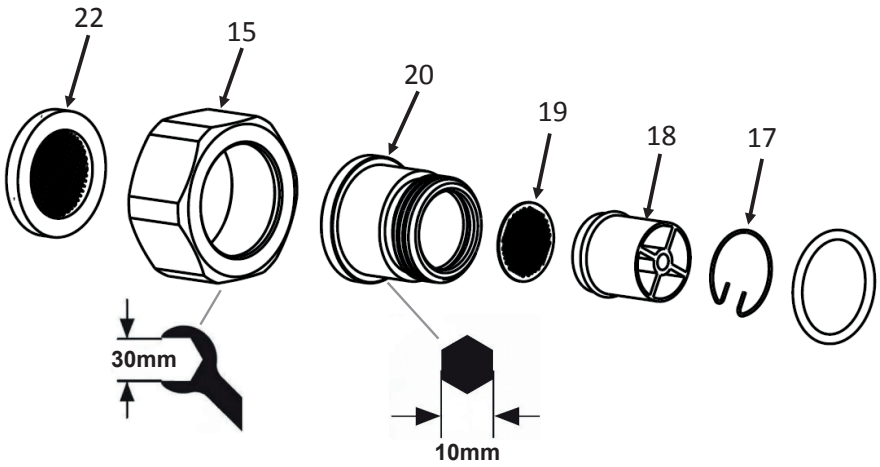


To replace the flow control cartridge:
(FIRST SEE HANDY TIPS, in section 15).

A. Remove the flow handle (13) (left hand side), see section 10.0
B. This will expose the flow cartridge (12).
C. Unscrew cartridge with 17mm A/F spanner and replace if necessary.

18. CHECK VALVES REPLACEMENT

Check valves and strainers (mesh filters) should be regularly serviced particularly in hard water areas. The check valves along with the strainers are located in the retaining nut.



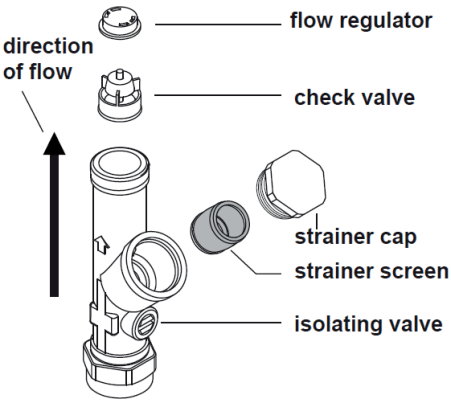
To replace the check valves: (FIRST SEE HANDY TIPS, in section 15).

- **A.** Separate the shower valve from the wall mounts by undoing the captive nuts (15). Use 30mm A/F spanner (take care not to damage chromed surfaces).
- **B.** Remove shower valve from wall. Clean & keep the sealing washers (22) safe.
- **C.** The check valves are housed inside the retaining inserts (20) within the inlet bores.
- **D.** Use 10mm hexagonal key undo the retaining inserts (20). Note: THREAD IS LEFT HAND.
- **E.** Use a pair of "long nose pliers" to squeeze the tangs of the retaining ring (17) & lift out.
- **F.** Gently pull out the check valves (18): check & clean or replace if necessary. Observe the flow direction of the check valve.
- **G.** Remove & clean the secondary finer strainer (19) (mesh filter).
- **H.** Reassemble the parts in reverse sequence.

19. INLINE SERVICE VALVES

Service valves (not supplied with this product) MUST be fitted to permit future maintenance.
They are also needed to perform the cold water isolation test.

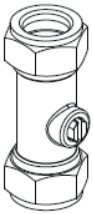
These should be fitted as close as is practicable to the water supply inlets of the thermostatic shower valve & be in an easily accessible location.



An in-line combined service valve (shown here) can be purchased by contacting Customer Care.

Spares code E960613NU contains a pair of these valves, suitable for 15mm supply pipes.

This valve also contains a flow regulator and check valve (which can be removed if not required).



Alternatively, basic in-line service valves with "isolating only" feature (shown here) are available under spares code S9005AA.

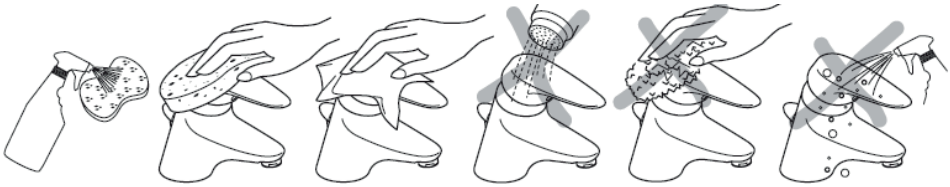
21. CLEANING CHROME SURFACES



Whilst this product has a high quality durable chrome finish, it should nevertheless be treated with care.
When cleaning chromed products use only a mild detergent, rinse & wipe dry with a soft cloth. Ideally clean after each use to maintain appearance.

Never use abrasive, scouring powders or scrapers. Never use cleaning agents containing alcohol, ammonia, hydrochloric acid, sulphuric acid, nitric acid, phosphoric acid or organic solvents.
Use of incorrect cleaning products / methods may result in chrome damage which is not covered by the manufacturer's guarantee.

22. GUARANTEE

This mixer body & chrome finish are offered with a 5-year guarantee against defects in manufacture. The thermostatic cartridge, flow cartridge, shower handset, hose, & riser rail parts are covered with a 2-year guarantee.
This mixer must be fitted by a competent installer. If in doubt seek advice from a qualified professional.

The guarantee requires the product be used in the manner for which it was intended and that it is installed & maintained in accordance with the fitting instructions and local water bylaws. The guarantee covers products for domestic use.

Ensure this product is fully tested before concealing joints into the wall. On installation ensure that the valve and valve inlet threads can be removed or serviced in accordance with water regulations.

The guarantee is invalidated should the valve be damaged by water borne debris. Make sure that supply pipes are clear of any debris prior to installation, this is particularly important on new plumbing installations. In the unlikely event that this product should fail during the guarantee period we will either replace the faulty part or the complete unit as appropriate.

This guarantee excludes normal wear and tear. This guarantee covers failure of the thermostatic cartridge within the first 2 years of purchase. Replacement cartridges are available to purchase by contacting the Customer Care Help Line. Failure to follow the terms outlined above will invalidate this guarantee. Proof of purchase will be required to validate any guarantee claims.

⚠ SAFETY INFORMATION

Before the installation and use of the appliance, carefully read the supplied instructions. The manufacturer is not responsible for any injuries or damage that are the result of incorrect installation or usage. Always keep the instructions in a safe and accessible location for future reference.

CHILDREN AND VULNERABLE PEOPLE SAFETY

- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning the use of the appliance in a safe way and understand the hazards involved.
- Children between 3 and 8 years of age and persons with very extensive and complex disabilities shall be kept away from the appliance unless continuously supervised.
- Children of less than 3 years of age should be kept away from the appliance unless continuously supervised.
- Children should be supervised to ensure that they do not play with the appliance.
- Keep detergents away from children.
- Keep children and pets away from the appliance when the door is open.
- Children shall not carry out cleaning and user maintenance of the appliance without supervision.

GENERAL SAFETY

- This appliance is for cleaning household-type dishes and tableware only.
- This appliance is designed for single household domestic use in an indoor environment.

- This appliance may be used in, offices, hotel guest rooms, bed & breakfast guest rooms, farm guest houses and other similar accommodation where such use does not exceed (average) domestic usage levels.
- Do not change the specification of this appliance.
- The operating water pressure (minimum and maximum) must be between 0.5 (0.05) / 10 (1.0) bar (MPa)
- Follow the maximum number of 13 place settings.
- If the supply cord is damaged, it must be replaced by the manufacturer, its Authorised Service Centre or similarly qualified persons in order to avoid a hazard.
- WARNING: Knives and other utensils with sharp points must be loaded in the basket with their points down or placed in a horizontal position.
- Do not leave the appliance with the open door unattended to avoid stepping accidentally onto it.
- Before any maintenance operation, deactivate the appliance and disconnect the mains plug from the socket.
- Do not use high pressure water sprays and/or steam to clean the appliance.
- If the appliance has ventilation openings in the base, they must not be covered e.g. by a carpet.
- The appliance is to be connected to the water mains using the new supplied hose-sets. Old hose sets must not be reused.

SAFETY INSTRUCTIONS

INSTALLATION

WARNING! Only a qualified person must install this appliance.

- Remove all the packaging.
- Do not install or use a damaged appliance.
- Follow the installation instructions supplied with the appliance.
- Always take care when moving the appliance as it is heavy. Always use safety gloves and enclosed footwear.
- Do not install or use the appliance where the temperature is less than 0 °C.
- Install the appliance in a safe and suitable place that meets installation requirements.
- Do not use the appliance before installing it in the built-in structure due to safety manner.

ELECTRICAL CONNECTION

WARNING! Risk of fire and electric shock.

- Warning: this appliance is designed to be installed / connected to a grounding connection in the building.
- Make sure that the parameters on the rating plate are compatible with the electrical ratings of the mains power supply.
- Always use a correctly installed shockproof socket.

- Do not use multi-plug adapters and extension cables.
- Make sure not to cause damage to the mains plug and to the mains cable. Should the mains cable need to be replaced, this must be carried out by our Authorised Service Centre.
- Connect the mains plug to the mains socket only at the end of the installation. Make sure that there is access to the mains plug after the installation.
- Do not pull the mains cable to disconnect the appliance. Always pull the mains plug.
- This appliance is fitted with a 13 A mains plug. If it is necessary to change the mains plug fuse, use only a 13 A ASTA (BS 1362) fuse (UK and Ireland only).

WATER CONNECTION

- Do not cause damage to the water hoses.
- Before connection to new pipes, pipes not used for a long time, where repair work has been carried out or new devices fitted (water meters, etc.), let the water flow until it is clean and clear.
- Ensure that there are no visible water leaks during and after the first use of the appliance.
- If the water inlet hose is damaged, immediately close the water tap and disconnect the mains plug from the mains socket. Contact the Authorised Service Centre to replace the water inlet hose.

USE

- Do not put flammable products or items that are wet with flammable products in, near or on the appliance.
- Dishwasher detergents are dangerous. Follow the safety instructions on the detergent packaging.
- Do not drink and play with the water in the appliance.
- Do not remove the dishes from the appliance until the programme is complete. Some detergent may remain on the dishes.
- Do not store items or apply pressure on the open door of the appliance.
- The appliance can release hot steam if you open the door while a programme operates.

SERVICE

- To repair the appliance contact the Authorised Service Centre. Use original spare parts only.
- Please note that self-repair or non-professional repair can have safety consequences and might void the guarantee.
- The following spare parts will be available for 7 years after the model has been discontinued: motor, circulation and drain pump, heaters and heating elements, including heat pumps, piping and related equipment including hoses, valves, filters and aquastops, structural and interior parts related to door assemblies, printed circuit boards, electronic displays, pressure switches, thermostats and sensors, software and firmware including reset software. Please note that some of these spare parts are only available to professional repairers, and that not all spare parts are relevant for all models.
- The following spare parts will be available for 10 years after the model has been discontinued: door hinge and seals, other seals, spray arms, drain filters, interior racks and plastic peripherals such as baskets and lids.
- Concerning the lamp(s) inside this product and spare part lamps sold separately: These lamps are intended to withstand extreme physical conditions in household appliances, such as temperature, vibration, humidity, or are intended to signal information about the operational status of the appliance. They are not intended to be used in other applications and are not suitable for household room illumination.

DISPOSAL

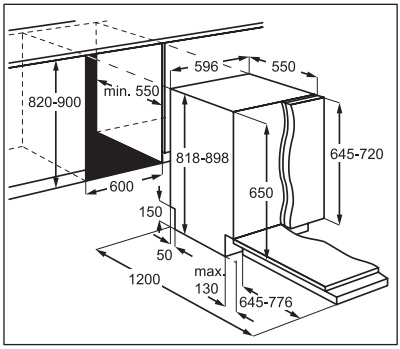
WARNING! Risk of injury or suffocation.

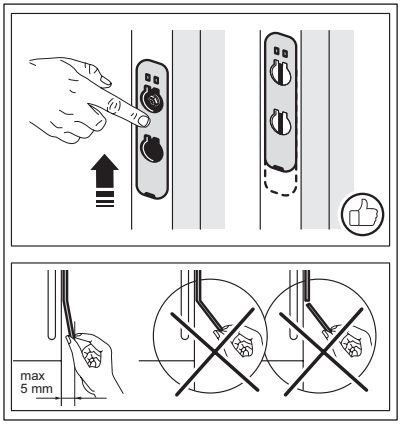
- Disconnect the appliance from the mains supply.
- Cut off the mains cable and discard it.
- Remove the door catch to prevent children and pets to get closed in the appliance.

INSTALLATION

WARNING! Refer to Safety chapters.

BUILDING IN





SAFETY CAPS

If the furniture panel is not installed, open the appliance door carefully to avoid the risk of injury.

After installation, make sure the plastic covers are locked in position. Damage or removal of the plastic covers on the sides of the door may impact the functionality of the appliance and may cause an injury. If the plastic cover is damaged, contact the Authorized Service Centre to replace it with the new one.

Programme	Dishwasher load	Degree of soil	Programme phases
3)	All	All	▪ Prewash

1) This programme offers the most efficient use of water and energy consumption for crockery and cutlery with normal soil. This is the standard programme for test institutes. This programme is used to assess compliance with the UK Ecodesign for Energy-Related Products and Energy Information Regulations.
2) Automatic door opening during the drying phase. Refer to "Settings".
3) With this programme, you can quickly rinse off food remains from dishes and prevent odours forming in the appliance. Do not use detergent with this programme.

CONSUMPTION VALUES

Programme 1)2)	Water (l)	Energy (kWh)	Duration (min)
ECO	9.9	0.936	227

1) The pressure and the temperature of the water, the variations of the mains supply, the options, the quantity of dishes and the degree of soil can change the values.
2) The values for programmes other than ECO are indicative only.

Information for test institutes

To receive the necessary information for conducting performance tests (e.g. according to: BS EN60436), send an email to:

info.test@dishwasher-production.com

In your request, include the product number code (PNC) from the rating plate.

For any other questions regarding your dishwasher, refer to the service book provided with your appliance.

SETTINGS

PROGRAMME SELECTION MODE AND USER MODE

When the appliance is in programme selection mode it is possible to set a programme and to enter user mode.

Settings available in the user mode:

- The level of water softener according to the water hardness.
- Activation or deactivation of the rinse aid empty notification.
- Activation or deactivation of the acoustic signal for the end of a programme.
- Activation or deactivation of the AirDry.

As the appliance stores the saved settings, there is no need to configure it before every cycle.

How to set the programme selection mode

The appliance is in programme selection mode when the programme indicator ECO flashes. After activation, the appliance is in programme selection mode by default. If not, set the programme selection mode the following way:

Press and hold the on/off button until the appliance is in programme selection mode.

How to enter user mode

Make sure the appliance is in programme selection mode.

To enter the user mode, press and hold the programme button until the indicator **ECO** flashes and the indicators **160** min, **90** min and 30 min are on.

THE WATER SOFTENER

The water softener removes minerals from the water supply, which would have a negative effect on the washing results and on the appliance.

The higher the content of these minerals, the harder your water is. Water hardness is measured in equivalent scales.

The water softener should be adjusted according to the hardness of the water in your area. Your local water authority can advise you on the hardness of the water in your area. Set the right level of the water softener to assure good washing results.

Water hardness

German degrees (°dH)	French degrees (°fH)	mmol/l	mg/l (ppm)	Clarke degrees	Water softener level
47 - 50	84 - 90	8.4 - 9.0	835 - 904	58 - 63	10

1) Factory setting.
2) Do not use salt at this level.

Regardless of the type of detergent used, set the proper water hardness level to keep the salt refill indicator active.

Multi-tabs containing salt are not effective enough to soften hard water.

Regeneration process

For the correct water softener operation, the resin of the softener device needs to be regenerated regularly. This process is automatic and is the part of the normal dishwasher operation.

When the prescribed quantity of water (see values in the table) has been used since the previous regeneration process, a new regeneration process will be initiated between the final rinse and the programme end.

Water softener level	Amount of water (l)
1	250
2	100

Water softener level	Amount of water (l)
3	62
4	47
5	25
6	17
7	10
8	5
9	3
10	3

In case of the high water softener setting, it may occur also in the middle of the programme, before the rinse (twice during a programme). Regeneration initiation has no impact on the cycle duration, unless it occurs in the middle of a programme or at the end of a programme with a short drying phase. In such cases, the regeneration prolongs the total duration of a programme by additional 5 minutes.

Subsequently, the rinsing of the water softener that lasts 5 minutes may begin in the same cycle or at the beginning of the next programme. This activity increases the total water consumption of a programme by additional 4 litres and the total energy consumption of a programme by additional 2 Wh. The rinsing of the softener ends with a complete drain.

Each performed softener rinse (possible more than one in the same cycle) may prolong the programme duration by another 5 minutes when it occurs at any point at the beginning or in the middle of a programme.

All the consumption values mentioned in this section are determined in line with the currently applicable standard in laboratory conditions with water hardness 2.5mmol/L (water softener: level 3) according to the regulation: UK Ecodesign 2021/745.
The pressure and the temperature of water as well as the variations of the mains supply can change the values.

How to set the water softener level

Make sure the appliance is in user mode.

1. Wait until the indicator $\overset{\text{SSS}}{\underline{\quad}}$ starts to flash, the indicator **ECO** continues to flash and the remaining indicators are off.

The intermittent flashing of the indicator $\overset{\text{SSS}}{\underline{\quad}}$ shows the current setting: e.g. 5 flashes + pause + 5 flashes = level 5.

2. Press the programme button repeatedly to change the setting. Each pressing of the programme button increases the level number. After reaching the level 10, the count starts again from the level 1.
3. Press the on/off button to confirm the setting.

THE RINSE AID EMPTY NOTIFICATION

The rinse aid helps to dry the dishes without streaks and stains. It is automatically released during the final rinse.

When the rinse aid chamber is empty, the rinse aid indicator turns on. If the drying results are satisfactory while using multi-tablets only, you can deactivate the notification for refilling the rinse aid. However, for best drying performance, always use rinse aid.

If standard detergent or multi-tablets without rinse aid are used, activate the notification to keep the rinse aid refill indicator active.

How to deactivate the rinse aid empty notification

Make sure the appliance is in user mode.

1. Press the programme button immediately.

The indicator $\overset{160}{\text{min}}$ starts to flash.

2. Wait until the indicator $\overset{160}{\text{min}}$ continues to flash and the remaining programme indicators are off.

The indicator $\overset{\text{SSS}}{\underline{\quad}}$ shows the current setting:

- $\overset{\text{SSS}}{\underline{\quad}}$ is on = Rinse aid empty notification is on.
- $\overset{\text{SSS}}{\underline{\quad}}$ is off = Rinse aid empty notification is off.

3. Press the programme button to change the setting.
4. Press the on/off button to confirm the setting.

ACOUSTIC SIGNALS

Acoustic signals sound when a malfunction of the appliance occurs. It is not possible to deactivate these acoustic signals.

There is also an acoustic signal that sounds when the programme is completed. By default this acoustic signal is deactivated but it is possible to activate it.

How to activate the acoustic signal for the end of the programme

Make sure the appliance is in user mode.

1. Press the programme button twice.

The indicator 90 min starts to flash.

2. Wait until the indicator 90 min continues to flash and the remaining programme indicators are off.

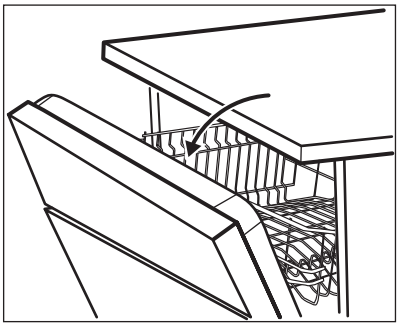
The indicator $\underset{\sim\sim\sim}{\sim\sim\sim}$ shows the current setting:

- $\underset{\sim\sim\sim}{\sim\sim\sim}$ is off = The acoustic signal is off.
- $\underset{\sim\sim\sim}{\sim\sim\sim}$ is on = The acoustic signal is on.

3. Press the programme button to change the setting.
4. Press the on/off button to confirm the setting.

AIRDRY

AirDry improves the drying results with less energy consumption. During the drying phase, the door opens automatically and remains ajar.



CAUTION! Do not try to close the appliance door within 2 minutes after automatic opening. This can cause damage to the appliance.

AirDry is automatically activated with all programmes excluding (if applicable). The duration of the drying phase and the door opening time vary depending on the selected programme and options.

CAUTION! If children have access to the appliance, it is advised to deactivate AirDry as opening the door may pose a danger.

How to deactivate the AirDry

Make sure the appliance is in user mode.

1. Press the programme button three times.

The indicator 30 min starts to flash.

2. Wait until the indicator 30 min continues to flash and the remaining programme indicators are off.

The indicator $\underset{\sim\sim\sim}{\sim\sim\sim}$ shows the current setting:

- $\underset{\sim\sim\sim}{\sim\sim\sim}$ is off = AirDry is off.
- $\underset{\sim\sim\sim}{\sim\sim\sim}$ is on = AirDry is on.

3. Press the programme button to change the setting.
4. Press the on/off button to confirm the setting.

BEFORE FIRST USE

1. **Make sure that the current level of the water softener agrees with the hardness of the water supply. If not, adjust the level of the water softener.**
2. Fill the salt container.
3. Fill the rinse aid dispenser.
4. Open the water tap.
5. Start a programme to remove any processing residuals that can still be inside the appliance. Do not use detergent and do not put dishes in the baskets.

After starting the programme, the appliance recharges the resin in the water softener for up to 5 minutes. The washing phase starts only after this procedure is complete. The procedure is repeated periodically.

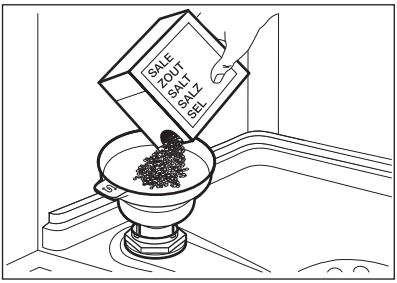
THE SALT CONTAINER

CAUTION! Use rough salt designed for dishwashers only. Fine salt increases the risk of corrosion.

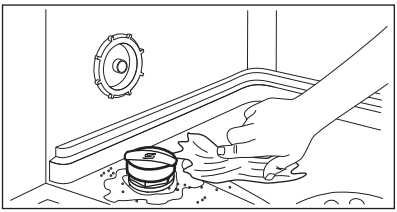
The salt is used to recharge the resin in the water softener and to assure good washing results in daily use.

HOW TO FILL THE SALT CONTAINER

1. Turn the cap of the salt container counterclockwise and remove it.
2. Put 1 litre of water in the salt container (only for the first time).
3. Fill the salt container with 1 kg of salt (until it is full).



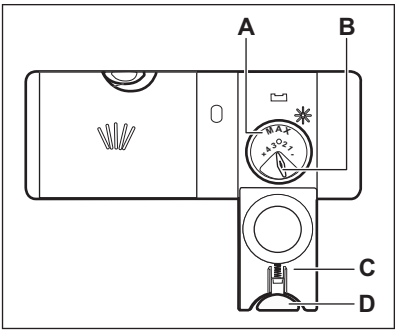
4. Carefully shake the funnel by its handle to get the last granules inside.
5. Remove the salt around the opening of the salt container.



6. Turn the cap of the salt container clockwise to close the salt container.

CAUTION! Water and salt can come out of the salt container when you fill it. After you fill the salt container, immediately start a programme to prevent corrosion.

HOW TO FILL THE RINSE AID DISPENSER



CAUTION! The compartment (**A**) is for rinse aid only. Do not fill it with detergent.

CAUTION! Only use rinse aid designed specifically for dishwashers.

1. Press the release button (**D**) to open the lid (**C**).
2. Fill the dispenser (**A**) until the rinse aid reaches the marking "MAX".
3. Remove the spilled rinse aid with an absorbent cloth to prevent excessive foam formation.
4. Close the lid. Make sure that the release button locks into position.

You can turn the selector of the released quantity (**B**) between position 1 (lowest quantity) and position 4 or 6 (highest quantity).

DAILY USE

1. Open the water tap.
2. Press the on/off button to activate the appliance.

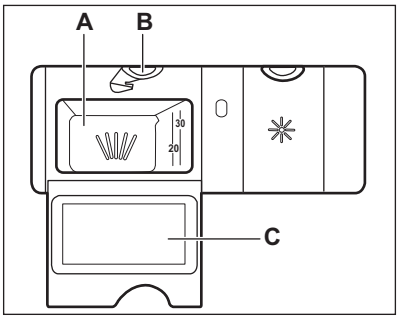
Make sure that the appliance is in programme selection mode.

- If the salt indicator is on, fill the salt container.

- If the rinse aid indicator is on, fill the rinse aid dispenser.

3. Load the baskets.
4. Add the detergent.
5. Set and start the correct programme for the type of load and the degree of soil.

USING THE DETERGENT



CAUTION! Only use detergent specifically designed for dishwashers.

1. Press the release button (**B**) to open the lid (**C**).
2. Put the detergent, in powder or tablets, in the compartment (**A**).
3. If the programme has a prewash phase, put a small quantity of detergent on the inner part of the appliance door.
4. Close the lid. Make sure that the release button locks into position.

For information about the detergent dosage, refer to the manufacturer's instructions on the packaging of the product. Usually, 20 - 25 ml of gel detergent is adequate for washing a load with normal soil.

Do not fill the compartment (**A**) with more than 30 ml of gel detergent.

SETTING AND STARTING A PROGRAMME

Starting a programme

1. Keep the appliance door ajar.
2. Press the on/off button to activate the appliance. Make sure that the appliance is in programme selection mode.
3. Press the programme button repeatedly until the indicator of the programme you want to select starts flashing.
4. Close the appliance door to start the programme.

Starting a programme with delay start

1. Set a programme.
2. Press the delay button to delay the start of the programme by 3 hours.

The indicator 3h is on.

3. Close the appliance door to start the countdown.

During the countdown, it is not possible to change the programme.

When the countdown is complete, the programme starts.

Opening the door while the appliance operates

Opening the door while a programme is running stops the appliance. It may affect the energy consumption and the programme duration. After closing the door, the appliance continues from the point of interruption.

If the door is opened for more than 30 seconds during the drying phase, the running programme ends. It does not happen if the door is opened by AirDry function.

Do not try to close the appliance door within 2 minutes after AirDry automatically opens it as this may cause damage to the appliance. If, afterwards, the door is closed for at least 3 minutes, the running programme ends.

Cancelling the delay start

Press the on/off button for 3 seconds until the appliance is in programme selection mode.

When you cancel the delay start, you have to set the programme again.

Cancelling the programme

Press the on/off button for 3 seconds until the appliance is in programme selection mode.

Make sure that there is detergent in the detergent dispenser before you start a new programme.

The Auto Off function

This function decreases energy consumption by deactivating automatically the appliance when it is not operating.

The function comes into operation:

- When the programme is complete.
- After 5 minutes if a programme was not started.

End of the programme

When the programme is complete, the Auto Off function switches the appliance off.

Close the water tap.

HINTS AND TIPS

GENERAL

Follow the hints below to ensure optimal cleaning and drying results in daily use and to protect the environment.

- Washing dishes in the dishwasher as instructed in the user manual usually consumes less water and energy than washing dishes by hand.
- Load the dishwasher to its full capacity to save water and energy. For best cleaning results, arrange items in the baskets as instructed in the user manual and do not overload the baskets.
- Do not pre-rinse dishes by hand. It increases the water and energy consumption. When needed, select a programme with a prewash phase.
- Remove larger residues of food from the dishes and empty cups and glasses before putting them inside the appliance.
- Soak or slightly scour cookware with firmly cooked-on or baked-on food before washing it in the appliance.
- Make sure that items in the baskets do not touch or cover each other. Only then can the water completely reach and wash the dishes.
- You can use dishwasher detergent, rinse aid and salt separately or you can use the multi-tablets (e.g. "All in 1"). Follow the instructions on the packaging.
- Select a programme according to the type of load and the degree of soil. **ECO** offers the most efficient use of water and energy consumption.
- To prevent limescale buildup inside the appliance:
  - Refill the salt container whenever necessary.
  - Use the recommended dosage of the detergent and rinse aid.
  - Make sure that the current level of the water softener agrees with the hardness of the water supply.
  - Follow the instructions in the chapter "**Care and cleaning**".

USING SALT, RINSE AID AND DETERGENT

- Only use salt, rinse aid and detergent designed for dishwasher. Other products can cause damage to the appliance.
- In areas with hard and very hard water, we recommend to use basic dishwasher detergent (powder, gel, tablets containing no additional agents), rinse aid and salt separately for optimal cleaning and drying results.
- Detergent tablets do not fully dissolve with short programmes. To prevent detergent residues on the tableware, we recommend that you use tablets with long programmes.
- Always use the correct quantity of detergent. Insufficient dosage of detergent can result in poor cleaning results and hard-water filming or spotting on the items. Using too much detergent with soft or softened water results in detergent residues on the dishes. Adjust the amount of detergent based on the water hardness. Refer to the instructions on the detergent packaging.
- Always use the correct quantity of rinse aid. Insufficient dosage of rinse aid decreases the drying results. Using too much rinse aid results in bluish layers on the items.
- Make sure that the water softener level is correct. If the level is too high, the increased quantity of salt in the water might result in rust on cutlery.

WHAT TO DO IF YOU WANT TO STOP USING MULTI-TABLETS

Before you start to use separately detergent, salt and rinse aid, complete the following steps:

1. Set the highest level of the water softener.
2. Make sure that the salt and rinse aid containers are full.
3. Start the shortest programme with a rinsing phase. Do not add detergent and do put dishes in the baskets.
4. When the programme is complete, adjust the water softener according to the water hardness in your area.
5. Adjust the released quantity of rinse aid.
6. Activate the rinse aid empty notification.

LOADING THE BASKETS

- Always use the whole space of the baskets.
- Use the appliance to wash dishwasher-safe items only.
- Do not wash the following materials in the dishwasher: wood, horn, pewter, copper, aluminium, delicate ornamented porcelain and

unprotected carbon steel. This can cause them to crack, warp, discolour, pit or rust.
- Do not wash in the appliance items that can absorb water (sponges, household cloths).
- Put hollow items (cups, glasses and pans) with the opening facing downwards.
- Make sure that glasses do not touch each other.
- Put light or plastic items in the upper basket. Make sure that the items do not move freely.
- Put cutlery and small items in the cutlery basket.
- Make sure that the spray arms can move freely before you start a programme.

BEFORE STARTING A PROGRAMME

Before you start the selected programme, make sure that:
- The filters are clean and correctly installed.
- The cap of the salt container is tight.
- The spray arms are not clogged.
- There is enough salt and rinse aid (unless you use multi-tablets).
- The arrangement of the items in the baskets is correct.
- The programme is suitable to the type of load and the degree of soil.
- The correct quantity of detergent is used.

UNLOADING THE BASKETS

1. Let the tableware cool down before you remove it from the appliance. Hot items can be easily damaged.
2. First remove items from the lower basket, then from the upper basket.

After the programme is completed, water can still remain on the inside surfaces of the appliance.

CARE AND CLEANING

WARNING! Before maintenance, deactivate the appliance and disconnect the mains plug from the main socket.

Dirty filters and clogged spray arms decrease the washing results. Make a check regularly and, if necessary, clean them.

INTERNAL CLEANING

- Clean the appliance interior with a soft damp cloth.
- Do not use abrasive products, abrasive cleaning pads, sharp tools, strong chemicals, scourer or solvents.
- Wipe clean the door, including the rubber gasket, once a week.
- To maintain the performance of your appliance, use a cleaning product designed for dishwashers at least once every two months. Carefully follow the instructions on the packaging of the product.
- Using short-duration programmes regularly can cause grease and limescale buildup inside the appliance. Run long-duration programmes at least twice a month to prevent the buildup.

REMOVAL OF FOREIGN OBJECTS

Check the filters and the sump after each use of the dishwasher. Foreign objects (e.g. pieces of glass, plastic, bones or toothpicks, etc) decrease the cleaning performance and can cause damage to the drain pump.

CAUTION! If unable to remove the foreign objects, contact an Authorised Service Centre.

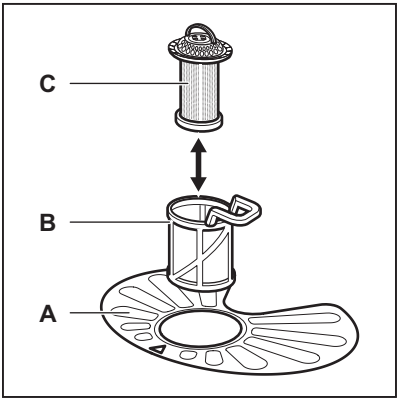
1. Disassemble the filters system as instructed in this chapter.
2. Remove any foreign objects manually.
3. Reassemble the filters as instructed in this chapter.

EXTERNAL CLEANING

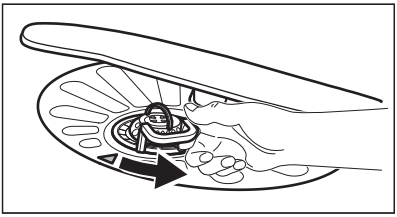
- Clean the appliance with a moist soft cloth.
- Only use neutral detergents.
- Do not use abrasive products, abrasive cleaning pads or solvents.

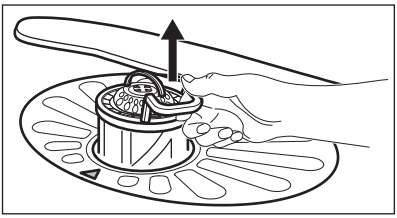
CLEANING THE FILTERS

The filter system is made of 3 parts.

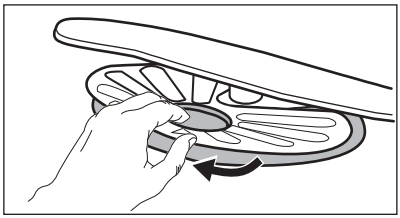


1. Turn the filter (**B**) counterclockwise and remove it.

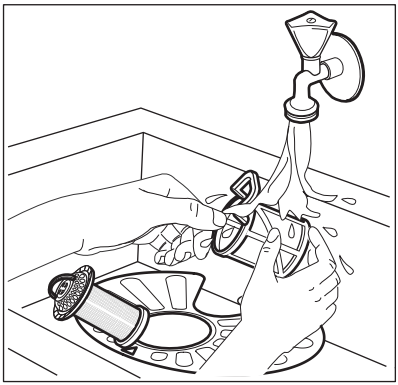




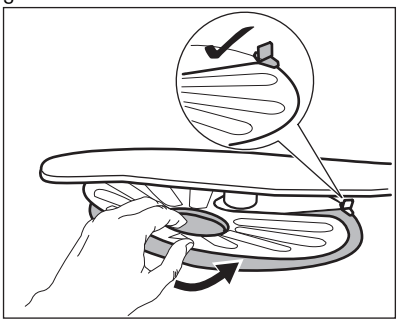
2. Remove the filter (**C**) out of filter (**B**).
3. Remove the flat filter (**A**).



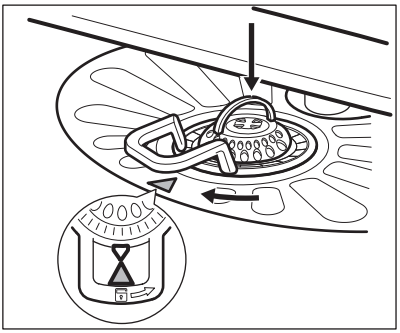
4. Wash the filters.



5. Make sure that there are no residues of food or soil in or around the edge of the sump.
6. Put back in place the flat filter (**A**). Make sure that it is correctly positioned under the 2 guides.



7. Reassemble the filters (**B**) and (**C**).
8. Put back the filter (**B**) in the flat filter (**A**). Turn it clockwise until it locks.

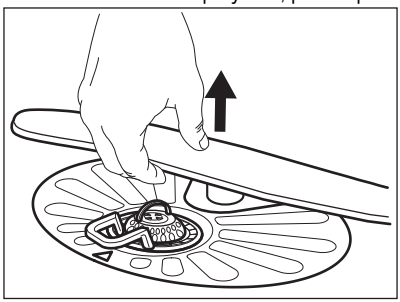


CAUTION! An incorrect position of the filters can cause bad washing results and damage to the appliance.

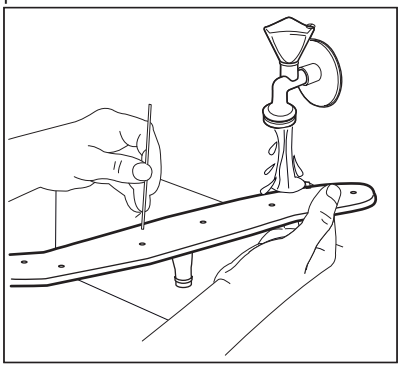
CLEANING THE LOWER SPRAY ARM

We recommend to clean the lower spray arm regularly to prevent soil from clogging the holes. Clogged holes can cause unsatisfactory washing results.

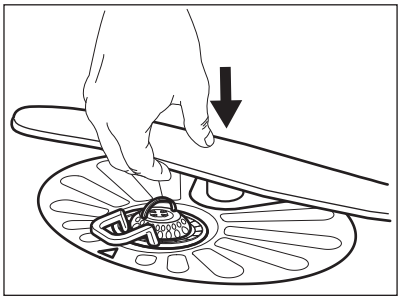
1. To remove the lower spray arm, pull it upwards.



2. Wash the spray arm under running water. Use a thin pointed tool, e.g. a toothpick, to remove particles of soil from the holes.



3. To install the spray arm back, press it downwards.



CLEANING THE UPPER SPRAY ARM

Do not remove the upper spray arm. If the openings in the spray arm are clogged, remove the remaining particles of soil with a thin pointed object, e.g. a toothpick.

TROUBLESHOOTING

WARNING! Improper repair of the appliance may pose a danger to the safety of the user. Any repairs must be performed by qualified personnel.

The majority of problems that can occur can be solved without the need to contact an Authorised Service Centre.

Refer to the below table for information on possible problems.

With some problems, the dedicated indicator flashes intermittently to indicate a malfunction and the alarm code.

Problem and alarm code	Possible cause and solution
You cannot activate the appliance.	▪ Make sure that the mains plug is connected to the mains socket. ▪ Make sure that there is no damaged fuse in the fuse box.
The programme does not start.	▪ Make sure that the appliance door is closed. ▪ If the delay start is set, cancel the setting or wait for the end of the countdown. ▪ The appliance recharges the resin inside the water softener. The duration of the procedure is approximately 5 minutes.
The appliance does not fill with water. ▪ The indicator flashes 1 time intermittently. ▪ Acoustic signal sounds 1 time intermittently.	▪ Make sure that the water tap is open. ▪ Make sure that the pressure of the water supply is not too low. For this information, contact your local water authority. ▪ Make sure that the water tap is not clogged. ▪ Make sure that the filter in the inlet hose is not clogged. ▪ Make sure that the inlet hose has no kinks or bends.
The appliance does not drain the water. ▪ The indicator flashes 2 times intermittently. ▪ Acoustic signal sounds 2 times intermittently.	▪ Make sure that the sink spigot is not clogged. ▪ Make sure that the interior filter system is not clogged. ▪ Make sure that the drain hose has no kinks or bends.
The anti-flood device is on. ▪ The indicator flashes 3 times intermittently. ▪ Acoustic signal sounds 3 times intermittently.	▪ Close the water tap. ▪ Make sure that the appliance is correctly installed. ▪ Make sure the baskets are loaded as instructed in the user manual.
Malfunction of the water level detection sensor. ▪ The indicator flashes 4 times intermittently. ▪ Acoustic signal sounds 4 times intermittently.	▪ Make sure that the filters are clean. ▪ Switch the appliance off and on.
Malfunction of the wash pump or the drain pump. ▪ The indicator flashes 5 times intermittently. ▪ Acoustic signal sounds 5 times intermittently.	▪ Switch the appliance off and on.

Problem and alarm code	Possible cause and solution
The temperature of the water inside the appliance is too high or malfunction of the temperature sensor occurred. ▪ The indicator flashes 6 times intermittently. ▪ Acoustic signal sounds 6 times intermittently.	▪ Make sure that the temperature of the inlet water does not exceed 60°C. ▪ Switch the appliance off and on.
Technical malfunction of the appliance. ▪ The indicator flashes 12 times intermittently. ▪ Acoustic signal sounds 12 times intermittently.	▪ Switch the appliance off and on.
The level of water inside the appliance is too high. ▪ The indicator flashes 15 times intermittently. ▪ Acoustic signal sounds 15 times intermittently.	▪ Switch the appliance off and on. ▪ Make sure that the filters are clean. ▪ Make sure that the outlet hose is installed at the right height above the floor. Refer to the installation instructions.
The appliance stops and starts more times during operation.	▪ It is normal. It provides optimal cleaning results and energy savings.
The programme lasts too long.	▪ If the delayed start option is set, cancel the delay setting or wait for the end of the countdown. ▪ Refer to the consumption values table in the chapter "**Programmes**".
Small leak from the appliance door.	▪ The appliance is not levelled. Loosen or tighten the adjustable feet (if applicable). ▪ The appliance door is not centred on the tub. Adjust the rear foot (if applicable).
The appliance door is difficult to close.	▪ The appliance is not levelled. Loosen or tighten the adjustable feet (if applicable). ▪ Parts of the tableware are protruding from the baskets.
The appliance door opens during the wash cycle.	▪ The AirDry function is activated. You can deactivate the function. Refer to "**Settings**".
Rattling/knocking sounds from inside the appliance.	▪ The tableware is not properly arranged in the baskets. Refer to basket loading leaflet. ▪ Make sure that the spray arms can rotate freely.
The appliance trips the circuit-beaker.	▪ The amperage is insufficient to supply simultaneously all the appliances in use. Check the socket amperage and the capacity of the meter or turn off one of the appliances in use. ▪ Internal electrical fault of the appliance. Contact an Authorised Service Centre.

Refer to "**Before first use**", "**Daily use**", or "**Hints and tips**" for other possible causes.

Once you have checked the appliance, deactivate and activate the appliance. If the problem occurs again, contact an Authorised Service Centre.

For alarm codes not described in the table, contact an Authorised Service Centre.

WARNING! We do not recommend using the appliance until the problem has been completely fixed. Unplug the appliance and do not plug it in again until you are certain that it operates correctly.

THE DISHWASHING AND DRYING RESULTS ARE NOT SATISFACTORY

Problem	Possible cause and solution
Poor washing results.	▪ Use more intensive washing programmes. ▪ Clean spray arm jets and the filter. Refer to "**Care and Cleaning**". ▪ Refer to "**Daily use**", "**Hints and tips**" and basket loading leaflet.
Poor drying results.	▪ Tableware has been left for too long inside the closed appliance. ▪ There is no rinse aid or the dosage of rinse aid is not sufficient. Fill the rinse aid dispenser or set the dosage of rinse aid to a higher level. ▪ Plastic items may need to be towel dried. ▪ For the best drying performance activate the function AirDry. ▪ Always use the rinse aid, even with multi-tablets.
There are whitish streaks or bluish layers on glasses and dishes.	▪ The release quantity of rinse aid is too high. Adjust the rinse aid dosage to a lower level. ▪ The quantity of detergent is too high.
There are stains and dry water drops on glasses and dishes.	▪ The released quantity of rinse aid is not sufficient. Adjust the rinse aid dosage to a higher level. ▪ The quality of the rinse aid can be the cause.
The dishes are wet.	▪ For the best drying performance activate the function AirDry. ▪ The programme does not have a drying phase or has a drying phase with low temperature. ▪ The rinse aid dispenser is empty. ▪ The quality of the rinse aid can be the cause. ▪ The quality of the multi-tablets can be the cause. Try a different brand or activate the rinse aid dispenser and use rinse aid and multi-tablets together.
The interior of the appliance is wet.	▪ This is not a defect of the appliance. Humidity condensates on the appliance walls.
Unusual foam during washing.	▪ Use the detergent designed specifically for dishwashers. ▪ Use a detergent from a different manufacturer. ▪ Do not pre-rinse dishes under running water.
Traces of rust on cutlery.	▪ There is too much salt in the water used for washing. Refer to "**The water softener**". ▪ Silver and stainless steel cutlery were placed together. Do not place silver and stainless steel items close together.

Problem	Possible cause and solution
There are residues of detergent in the dispenser at the end of the programme.	▪ The detergent tablet got stuck in the dispenser and was not washed away by water. ▪ Water cannot wash away the detergent from the dispenser. Make sure that the spray arm is not blocked or clogged. ▪ Make sure that items in the baskets do not impede the lid of the detergent dispenser from opening.
Odours inside the appliance.	▪ Refer to "**Internal cleaning**".
Limescale deposits on the tableware, on the tub and on the inside of the door.	▪ The level of salt is low, check the refill indicator. ▪ The cap of the salt container is loose. ▪ Your tap water is hard. Refer to "**The water softener**". ▪ Even using multi-functional tabs use salt and set regeneration of the water softener. Refer to "**The water softener**". ▪ If limescale deposits persist, clean the appliance with the suitable detergents. ▪ Try different detergent. ▪ Contact the detergent manufacturer.
Dull, discoloured or chipped tableware.	▪ Make sure that only dishwasher-safe items are washed in the appliance. ▪ Load and unload the basket carefully. Refer to basket loading leaflet. ▪ Place delicate items in the upper basket.

Refer to "**Before first use**", "**Daily use**" or "**Hints and tips**" for other possible causes.

⚠ SAFETY INFORMATION

Before beginning the installation and use of this appliance, carefully read the supplied instructions.
The manufacturer is not responsible for any injuries or damage that are the result of incorrect installation or usage. Always keep the instructions in a safe and accessible location for future reference.

CHILDREN AND VULNERABLE PEOPLE SAFETY

- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning the use of the appliance in a safe way and understand the hazards involved.
- Children between 3 and 8 years of age and persons with very extensive and complex disabilities shall be kept away from the appliance unless continuously supervised.
- Children of less than 3 years of age should be kept away from the appliance unless continuously supervised.
- Children should be supervised to ensure that they do not play with the appliance.
- Keep all packaging away from children and dispose of it appropriately.
- Keep detergents away from children.
- Keep children and pets away from the appliance when the door is open.
- If the appliance has a child safety device, it should be activated.
- Children shall not carry out cleaning and user maintenance of the appliance without supervision.

GENERAL SAFETY

- This appliance is for washing domestic-type, machine-washable laundry only.
- This appliance is designed for single household domestic use in an indoor environment.
- This appliance may be used in, offices, hotel guest rooms, bed & breakfast guest rooms, farm guest houses and other similar accommodation where such use does not exceed (average) domestic usage levels.
- Do not change the specification of this appliance.
- The appliance maximum load is 8 kg. Do not exceed the maximum load of each programme (refer to the “Programmes” chapter).
- The operating water pressure at the water entry point from the outlet connection must be between 0.5 bar (0.05 MPa) and 10 bar (1.0 MPa).
- The ventilation opening in the base must not be covered by a carpet, mat, or any floor covering.
- The appliance must be connected to the water mains using the new supplied hose sets, or other new hose sets supplied by the Authorised Service Centre.
- Old hose sets must not be reused.
- If the mains power supply cable is damaged, it must be replaced by the manufacturer, its Authorised Service Centre or similarly qualified persons to avoid an electrical hazard.
- Before any maintenance operation, deactivate the appliance and disconnect the mains plug from the socket.
- Do not use high pressure water sprays and/or steam to clean the appliance.
- Clean the appliance with a moist cloth. Use only neutral detergents. Do not use abrasive products, abrasive cleaning pads, solvents or metal objects.

SAFETY INSTRUCTIONS

INSTALLATION

The installation must comply with relevant national regulations.

- Remove all the packaging and the transit bolts including rubber bush with plastic spacer.
- Keep the transit bolts in a safe place. If the appliance is to be moved in the future they must be reattached to lock the drum to prevent an internal damage.
- Always take care when moving the appliance as it is heavy. Always use safety gloves and enclosed footwear.
- Follow the installation instructions supplied with the appliance.
- Do not install or use a damaged appliance.
- Do not install or use the appliance where the temperature can be less than 0°C or where it is exposed to the weather.
- The floor area on which the appliance is to be installed must be flat, stable, heat resistant and clean.
- Make sure that there is air circulation between the appliance and the floor.
- When the appliance is in its permanent position, check if it is levelled correctly with the aid of a spirit level. If it is not, adjust the feet accordingly.
- Do not install the appliance directly above a floor drain.
- Do not spray water on the appliance and do not expose it to excessive humidity.
- Do not install the appliance where the appliance door cannot be fully opened.
- Do not put a closed container to collect possible water leakage under the appliance. Contact the Authorised Service Centre to ensure which accessories can be used.

ELECTRICAL CONNECTION

WARNING! Risk of fire and electric shock.

- WARNING: This appliance is designed to be installed / connected to a grounding connection in the building.
- Always use a correctly installed shockproof socket.
- Make sure that the parameters on the rating plate are compatible with the electrical ratings of the mains power supply.
- Do not use multi-plug adapters and extension cables.
- Make sure not to cause damage to the mains plug and to the mains cable. Should the mains cable need to be replaced, this must be carried out by our Authorised Service Centre.
- Connect the mains plug to the mains socket only at the end of the installation. Make sure that there is access to the mains plug after the installation.
- Do not touch the mains cable or the mains plug with wet hands.
- Do not pull the mains cable to disconnect the appliance. Always pull the mains plug.
- This appliance is fitted with a 13 A mains plug. If it is necessary to change the mains plug fuse, use only a 13 A ASTA (BS 1362) fuse (UK and Ireland only).

WATER CONNECTION

- The inlet water shall not exceed 25 °C.
- Do not cause damage to the water hoses.
- Before connection to new pipes, pipes not used for a long time, where repair work has been carried out or new devices fitted (water meters, etc.), let the water flow until it is clean and clear.
- Ensure that there are no visible water leaks during and after the first use of the appliance.
- Do not use an extension hose if the inlet hose is too short. Contact the Authorised Service Centre for the replacement of the inlet hose.
- When unpacking the appliance, It is possible to see water flowing from the drain hose. This is due to the testing of the appliance with the use of water in the factory.
- You can extend the drain hose to maximum 400 cm. Contact the Authorised Service Centre for the other drain hose and the extension.
- Make sure that there is access to the tap after the installation.

USE

WARNING! Risk of injury, electric shock, fire, burns or damage to the appliance.

- Follow the safety instructions on the detergent packaging.
- Do not put flammable products or items that are wet with flammable products in, near or on the appliance.
- Do not wash fabrics which are heavily soiled with oil, grease or other greasy substances. It can damage rubber parts of the washing machine. Prewash such fabrics by hand before loading them into the washing machine.

- Do not touch the glass door while a programme operates. The glass can get hot.
- Make sure that all metal objects are removed from the laundry.

SERVICE

- To repair the appliance contact the Authorised Service Centre. Use original spare parts only.
- Please note that self-repair or non-professional repair can have safety consequences and might void the guarantee.
- The following spare parts will be available for 10 years after the model has been discontinued: motor and motor brushes, transmission between motor and drum, pumps, shock absorbers and springs, washing drum, drum spider and related ball bearings, heaters and heating elements, including heat pumps, piping and related equipment including hoses, valves, filters and aquastops, printed circuit boards, electronic displays, pressure switches, thermostats and sensors, software and firmware including reset software, door, door hinge and seals, other seals, door locking assembly, plastic peripherals such as detergent dispensers. Please note that some of these spare parts are only available to professional repairers, and that not all spare parts are relevant for all models.
- Concerning the lamp(s) inside this product and spare part lamps sold separately: These lamps are intended to withstand extreme physical conditions in household appliances, such as temperature, vibration, humidity, or are intended to signal information about the operational status of the appliance. They are not intended to be used in other applications and are not suitable for household room illumination.

DISPOSAL

WARNING! Risk of injury or suffocation.

- Disconnect the appliance from the mains electrical and water supplies.
- Cut off the mains electrical cable close to the appliance and dispose of it.
- Remove the door catch to prevent children or pets from becoming trapped in the drum.
- Dispose of the appliance in accordance with local requirements for the disposal of Waste Electrical and Electronic Equipment (WEEE).

TECHNICAL DATA

Dimension	Width/ Height/ Total depth	59,6 cm /84,7 cm /57,6 cm
Electrical connection	Voltage Overall power Fuse Frequency	230-240 V 2000 W 13 A 50 Hz
Level of protection against ingress of solid particles and moisture ensured by the protective cover, except where the low voltage equipment has no protection against moisture		IPX4
Water supply pressure **1)**	Minimum Maximum	0.5 bar (0.05 MPa) 10 bar (1.0 MPa)
Water supply **2)**		Cold water
Maximum Load	Cotton	8 kg
Spin Speed	Maximum spin speed	1351 rpm

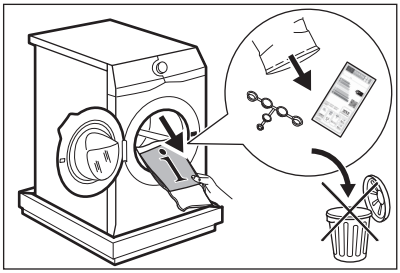
1) The appliance works correctly if the water pressure is not lower than 0.05 MPa (0.5 bar). If you cannot connect the water inlet hose to the cold water tap of the primary hydraulic system, connect it to your domestic cold water storage system. Make sure not to exceed a distance of 5.02 m (16.5 ft) between the appliance inlet hose and the bottom of the water storage tank.
2) Connect the water inlet hose to a water tap with a 3/4" thread.

INSTALLATION

WARNING! Refer to Safety chapters.

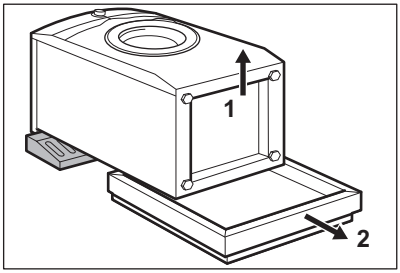
UNPACKING

1. Open the door. Remove all the items from the drum.



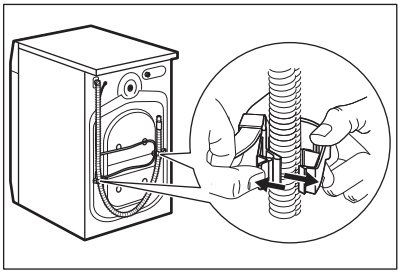
Accessories delivered with the appliance may vary depending on the model.

2. Put the packaging element on the floor behind the appliance and carefully put it down onto its rear side. Remove the polystyrene protection from the bottom.



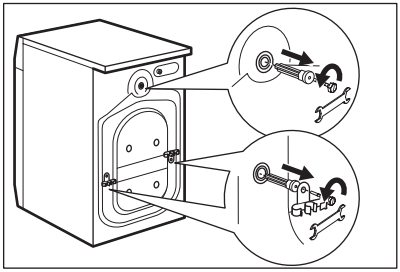
CAUTION! Do not lay washing machine on its front.

3. Put the appliance back into an upright position. Remove the power supply cable and the drain hose from the hose holders.



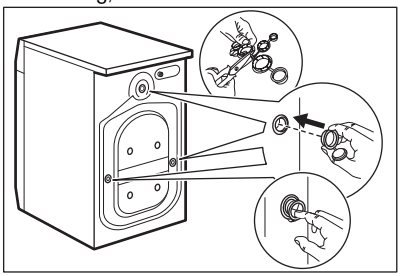
WARNING! It is possible to see water flowing from the drain hose. This is because the washing machine has been tested at the factory.

4. Remove the three transit bolts and pull out the plastic spacers.



We recommend that you keep the packaging and the transit bolts for any transport of the appliance.

5. Put the plastic caps, that you find in the user manual bag, in the holes.



INFORMATION FOR INSTALLATION

Positioning and levelling

Adjust the appliance correctly to prevent vibration, noise and movement of the appliance when it operates.

1. Install the appliance on a flat hard floor. The appliance must be levelled and stable. Make sure that the appliance does not touch the wall or other units and there is air circulation below the appliance.

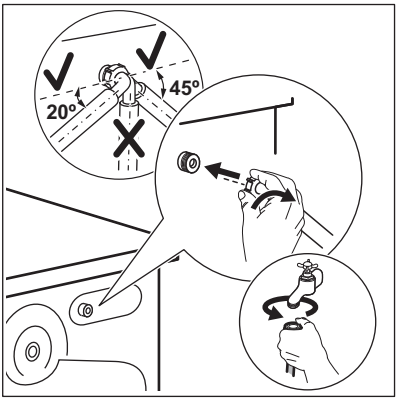
2. Loosen or tighten the feet to adjust the level. All feet must rest firmly on the floor.

WARNING! Do not put cardboard, wood or equivalent materials below the appliance feet to adjust the level.

The inlet hose

CAUTION! Make sure there is no damage to hoses and there are no leaks from the couplings. Do not use an extension hose if the inlet hose is too short. Contact the service centre for a replacement inlet hose.

1. Connect the water inlet hose to the back of the appliance.



2. Position it toward left or right depending on the positon of the water tap. Make sure that the inlet hose is not in vertical position.

3. If necessary, loosen the ring nut to set it in the correct position.

4. Connect the water inlet hose to the cold water tap with 3/4" thread.

WARNING! The inlet water shall not exceed 25 °C.

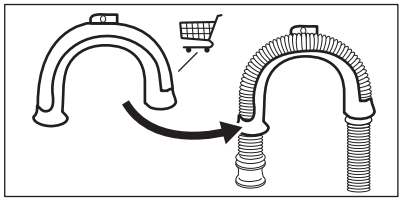
Water drainage

The drain hose should stay at a height of no less than 60 cm and not more than 100 cm.

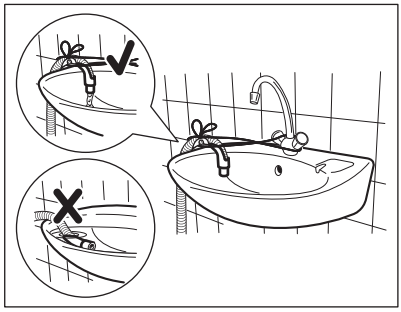
You can extend the drain hose to maximum 400 cm. Contact the authorised service centre for the other drain hose and the extension.

It is possible to connect the drain hose in different ways:

1. Make a U shape with the drain hose and put it around the plastic hose guide.

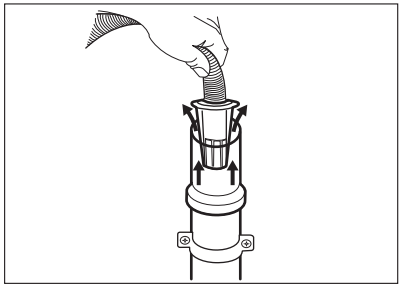


2. On the edge of a sink - Fasten the guide to the water tap or to the wall.

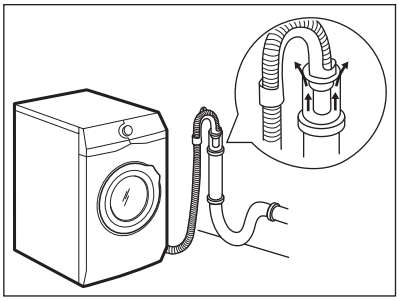


Make sure that the plastic guide cannot move when the appliance drains and the drain hose end is not immersed in the water. There may be a return of dirty water into the appliance.

3. If the end of the drain hose looks like this (see the picture), you can push it directly into the stand pipe.

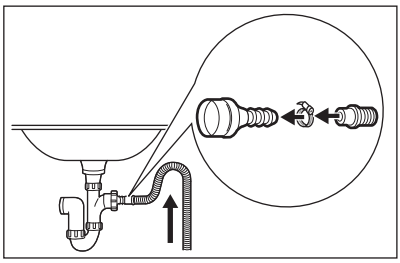


4. To a stand pipe with vent hole - Insert the drain hose directly into a drain pipe. Refer to the illustration.

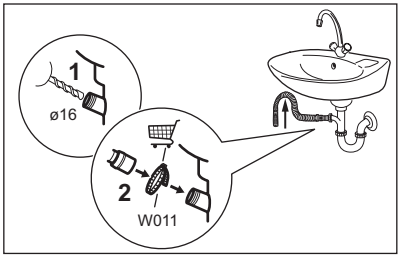


The end of the drain hose must always be ventilated , i.e. the inner diameter of the drain pipe (min. 38 mm - min. 1.5") must be larger than the external diameter of the drain hose.

5. Without the plastic hose guide, to a sink spigot- Put the drain hose in the spigot and tighten it with a clamp. Refer to the illustration.

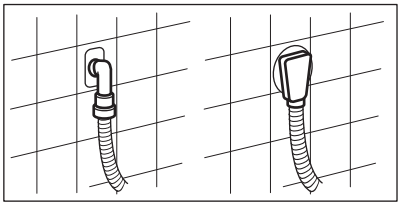


Make sure that the drain hose makes a loop to prevent particles going into the appliance from the sink.



Connect the drain hose to the spigot and tighten it with a clamp. Make sure that the drain hose makes a loop to prevent particles going into the appliance from the sink.

6. Position the hose directly to a built-in drain pipe in the room wall and tighten it with a clamp.



INSTALLATION ON SUSPENDED FLOORING

Suspended wooden floors are particularly susceptible to vibration.

To limit vibration we recommend placing a waterproof wooden panel, at least 15 mm thick, under the appliance. It should be screwed to at least 2 floor beams and should extend beyond the front feet.

If possible, install the appliance where the floor is more stable.

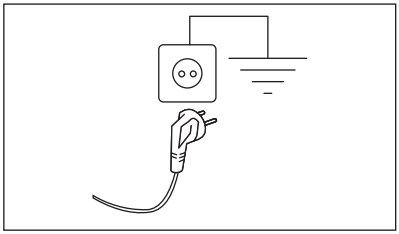
ELECTRICAL CONNECTION

At the end of installation you can connect the mains plug to the mains socket.

The rating plate on the inner edge of the appliance door and the 'Technical Data' chapter indicate the necessary electrical ratings. Make sure that they are compatible with the mains power supply.

Check that your domestic electrical installation can take the maximum load required, also taking into account any other appliances in use.

Connect the appliance to an earthed socket.



The power supply cable must be easily accessible after installing the appliance.

For any electrical work required to install this appliance, contact our Authorised Service Centre.

The manufacturer does not accept any responsibility for damage or injury through failure to comply with the above safety precaution.

ACCESSORIES

AVAILABLE IN WWW.ZANUSSI.COM/SHOP OR FROM AUTHORISED DEALER

Read carefully the instructions supplied with the accessory.

Only appropriate accessories approved by ZANUSSI ensure the safety standards of the appliance. If unapproved parts are used, any claims will be invalidated.

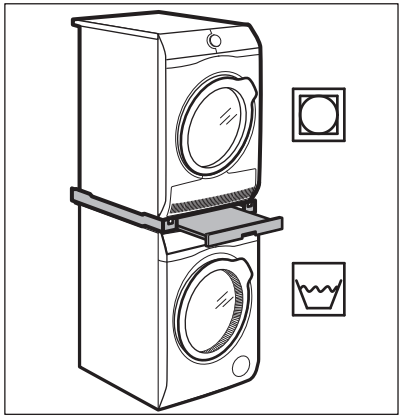
FIXING PLATE KIT

If you install the appliance on a plinth that is not an accessory supplied by ZANUSSI, secure the appliance in the fixing plates.

Read carefully the instructions supplied with the accessory.

STACKING KIT

The tumble dryer can be stacked on the top of the washing machine **only by using the correct stacking kit**.



WARNING! Do not put the tumble dryer under the washing machine. Verify the compatible stacking kit by checking the depth of your appliances.

CONTROL PANEL

SPECIAL FEATURES

Your new washing machine meets all modern requirements for an effective treatment of laundry with low water, energy and detergent consumption and will care for fabrics.

- The **AutoAdjust System** automatically adjusts the programme duration to the laundry in the drum to achieve perfect washing results in the minimum possible time. Read the paragraph "The AutoAdjust load detection " for more details.
- This appliance is designed with a **self cleaning draining system**, allowing light fluff fibers that fall off the clothes to be drained out with the water, in such a way that there is no need by the customer to access this area for regular maintenance and cleaning. Read the chapter "Care and Cleaning" for best maintenance and care.

DIAL AND BUTTONS

INTRODUCTION

The options/functions are not available with all washing programmes. Check the compatibility between options/functions and washing programmes in the "Programme Chart". An option/function can exclude another one, in this case the appliance doesn't allow you to set incompatible options/functions.

ON/OFF

Press this button for a few seconds to activate or deactivate the appliance. Two different tunes sound while switching the appliance on or off.

As the Stand-by function automatically deactivates the appliance after several minutes to reduce the energy consumption, you may need to activate the appliance again.

For more details, refer to Stand-by paragraph in Daily Use chapter.

TEMP.

When you select a washing programme, the appliance automatically proposes a default temperature.

The indicator Cold ✳ = cold water.

The indicator of the set temperature comes on.

SPIN

When you set a programme, the appliance automatically sets the maximum spin speed allowed except programme Denim.

Additional spin options:

- **No Spin** . The related indicator comes on. Set this option to deactivate all spin phases. The appliance performs only the draining phase of the selected washing programme. Set this option for very delicate fabrics. The rinse phase uses more water for some washing programmes
- **Rinse Hold** . The related indicator comes on.
  The final spin is not performed. The water of the last rinse is not drained out to prevent the fabrics from creasing. The washing programme ends with water in the drum.
  The door stays locked and the drum turns regularly to reduce creasing. You must drain the water to unlock the door.
  If you touch the Start/Pause ▷‖ button, the appliance performs the spinning phase and drains the water.
- **Night** . The related indicator comes on. The intermediate and the final spinning phases are suppressed and the programme ends with water in the drum. This helps to reduce creasing. The door stays locked. The drum turns

regularly to reduce creasing. You must drain the water to unlock the door.
As the programme is very quiet, it is suitable for use at night time when cheaper electricity tariffs are available. In some programmes the rinses are performed with more water.

If you touch the Start/Pause ▷‖ button, the appliance performs only the draining phase.

The appliance empties the water out automatically after approximately 18 hours.

PREWASH

With this option you can add a prewash phase to a washing programme.

The relevant indicator illuminates.

- Use this option to add a pre-wash phase at 30 °C before the washing phase.
  This option is recommended for heavily soiled laundry, especially if containing sand, dust, mud and other solid particles.

These options can increase the programme duration.

PERMANENT EXTRA RINSE

With this option you can add a few rinses according to the selected washing programme.

Use this option for people with allergies to detergent residues and with sensitive skin.

This option increases the programme duration.

The corresponding indicator above the touch button illuminates and also stays permanently on during next cycles until this option is deactivated.

EASY IRON

The appliance carefully washes and spins the laundry to prevent the creases.

The appliance decreases the spin speed, uses more water and adapts the programme duration to the type of laundry.

The related indicator comes on.

DELAY START

With this option you can delay the start of a programme to a more convenient time.

Touch the button repeatedly to set the required delay. The time increases in steps of 1 hour up to 20 hours.

The display shows the indicator ◷ and the selected delay time. After touching the Start/Pause ▷‖ button, the appliance begins the countdown and the door is locked.

FLEXITIME

With this option you can reduce the programme duration depending on the load size and the degree of soiling. This adjustment should be made after the setting of Temp. and Spin .

When you set a washing programme, the display shows the default duration and ‾‾‾‾‾ dashes.

Touch FlexiTime button to reduce the programme duration according to your needs. The display shows the new programme duration and a number of dashes will decrease accordingly:

‾‾‾‾‾ suitable for a full load of normally soiled garments.

‾‾‾ a quick cycle for a smaller lightly soiled garments (max. half load recommended).

‾ the shortest cycle to freshen up a small amount of laundry.

The FlexiTime is available only with the programmes in the table.

PROGRAMMES

PROGRAMME CHART

Programme Default temperature Temperature range	Reference spin speed Spin speed range	Maximum load	Programme description (Type of load and level of soiling)
Eco 40-60 40 °C [1)]	1400 rpm (1400- 800 rpm)	8 kg	**White cotton and fast-coloured cotton**. Normally soiled items. The energy consumption decreases and the time of the washing programme is extended, ensuring good washing results.
Cottons 40°C 90°C - Cold	1400 rpm (1400- 800 rpm)	8 kg	**White cotton and coloured cotton**. Normally, heavily and lightly soiled items.
Synthetics 40°C 60°C - Cold	1200 rpm (1200- 800 rpm)	3 kg	**Synthetic items or mixed fabric items**. Normally soiled items.
Delicates 30°C 40°C - Cold	1200 rpm (1200- 800 rpm)	2 kg	**Delicate fabrics such as acrylics, viscose and mixed fabrics requiring gentler washing**. Normally and lightly soiled items.
Wool 40 °C 40°C - Cold	1200 rpm (1200- 800 rpm)	1,5 kg	**Machine washable wool, hand washable wool and other fabrics** with «hand washing» care symbol[2)].
Denim 30 °C 40 °C - Cold	800 rpm (1200 - 800 rpm)	3 kg	**Special programme for Denim clothing with delicate washing phase to minimize colour fading and marks**. For better care a reduced load size is recommended.
Sportswear 30 °C 40°C - Cold	1200 rpm (1200- 800 rpm)	3 kg	**Synthetic and delicate items**. Lightly soiled items or items to refresh.
Spin/Drain 3)	1400 rpm (1400 -800 rpm)	8 kg	**All fabrics, except woollens and delicate fabrics**. To spin the laundry and to drain the water in the drum.
Rinse	1400 rpm (1400- 800 rpm)	8 kg	To rinse and spin the laundry. **All fabrics**, except woollens and very delicate fabrics. Reduce the spin speed accordingly to the type of laundry.
Dark Colours 40°C 60°C - Cold	1200 rpm (1200- 800 rpm)	8 kg	**Cotton items or mixed fabric items in dark colours.** Normally soiled items.

Programme Default temperature Temperature range	Reference spin speed Spin speed range	Maximum load	Programme description (Type of load and level of soiling)
CleanBoost 60 °C	1400 rpm (1400- 800 rpm)	8 kg	White cotton items. This program removes micro-organisms thanks to a washing phase with the temperature maintained above 60°C for several minutes. This helps remove germs, bacteria, micro-organism and particles. An additional rinsing phase ensures a proper removal of detergent residues and pollens/allergenic items. In this way the wash is more effective.
14min Refresh 30 °C	800 rpm (800- 800 rpm)	1,5 kg	**Synthetic and mixed fabric items.** Very light soiling and items to freshen up.
30min Rapid 40°C 40°C - 30°C	1200 rpm (1200- 800 rpm)	3 kg	**Synthetic and mixed fabric items.** Lightly soiled items.
60min EasyWash 30°C 60°C - 30°C	1400 rpm (1400- 800 rpm)	5 kg	Cotton and fast-coloured synthetic items. Complete washing program that, in only 60 minutes, washes the daily soiled laundry intensively and ensures a good washing performance in a short time.

1) According to UK Ecodesign for Energy-Related Products and Energy Information Regulations and to the EU Ecodesign Regulation 2019/2023 and the EU Energy Label Regulation 2019/2014, this programme at 40 °C is able to clean normally soiled cotton laundry declared to be washable at 40 °C or 60 °C, together in the same cycle.

For the reached temperature in the laundry, the programme duration and other data, please refer to 'Consumption Values' chapter.
The most efficient programmes in terms of energy consumption are generally those that perform at lower temperatures and longer duration.

2) During this cycle the drum rotates slowly to ensure a gentle wash. It can seem that the drum doesn't rotate or doesn't rotate properly, but this is normal for this programme.
3) Set the spin speed. Make sure it is suitable for the type of fabric being washed. If you set the No Spin option then only the drain phase is available.

SETTINGS

ACOUSTIC SIGNALS

This appliance has different acoustic signals, that operate when:

- You activate the appliance (special short tune).
- You deactivate the appliance (special short tune).
- You touch the buttons (click sound).
- You make an invalid selection (3 short sounds).
- The programme is completed (sequence of sounds for about 1 minute).
- The appliance has a malfunction (sequence of short sounds for about 5 minutes).

To **deactivate/activate** the acoustic signals set a one of the programme, touch the Temp. and the Spin buttons simultaneously for about 2 seconds. The display shows On/Off

If you deactivate the acoustic signals, they continue to operate when the appliance has a malfunction.

CHILD LOCK

With this option you can prevent children from playing with the control panel.

To **activate/deactivate** this option, hold down the Easy Iron button until **comes on/goes off** on the display.

The appliance will default to this option after you switch it off.

The Child Lock function may not be available for a few seconds after switching the appliance on.

BEFORE FIRST USE

1. Make sure that the electrical power is available and the water tap is open.
2. Pour a small quantity of detergent into the compartment marked by .
3. Set and start a programme for cotton at the highest temperature without any laundry in the drum.

This removes all possible dirt from the drum and the tub.

DAILY USE

WARNING! Refer to Safety chapters.

ACTIVATING THE APPLIANCE

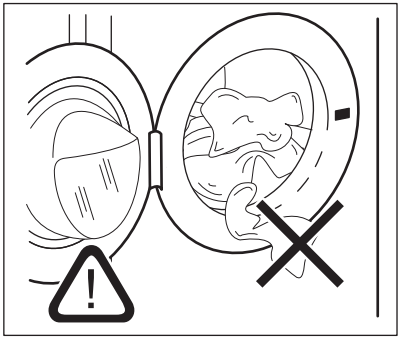
1. Connect the mains plug to the mains socket.
2. Open the water tap.
3. Press the ON/OFF button for a few seconds to activate the appliance.

A short tune sounds.

LOADING THE LAUNDRY

1. Open the appliance door.
2. Empty the pockets and unfold the items before you put them in the appliance.

3. Put the laundry in the drum, one item at a time.
Do not put too much laundry in the drum.
4. Close the door firmly.

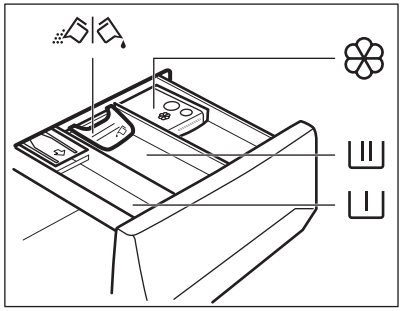


CAUTION! Make sure that no laundry gets caught between the seal and the door to avoid risk of water leakage and damage to the laundry.

Washing heavily oiled, greasy stains could cause damage to rubber parts of the washing machine.

DETERGENT COMPARTMENTS. USING AND ADDITIVES

1. Measure out specified detergents and the fabric conditioner.
2. Put the detergent and the fabric conditioner into the proper compartments.
3. Carefully close the detergent drawer.



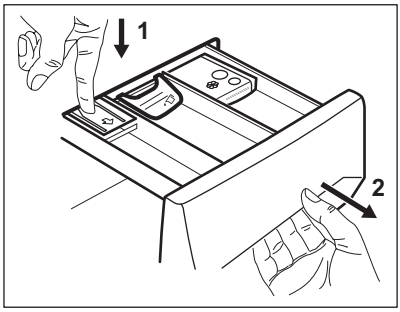
I	Compartment for prewash phase, soak programme or stain remover.
II	Compartment for washing phase.
❀	Compartment for liquid additives (fabric conditioner, starch).
MAX	Maximum level for quantity of liquid additives.
	Flap for powder or liquid detergent.

Always follow the instructions that you find on the packaging of the detergent products, but we recommend that you do not exceed the maximum indicated level. This quantity will however guarantee the best washing results.

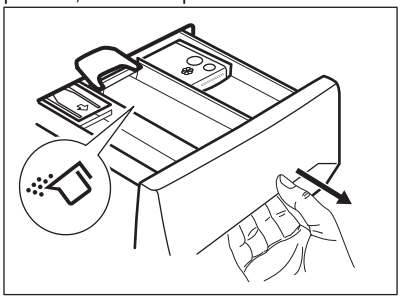
After a washing cycle, if necessary, remove any detergent residue from the detergent dispenser.

POSITION OF THE DETERGENT FLAP

1. Pull out the detergent dispenser until it stops.
2. Remove the drawer. Press the place with the (PUSH) to remove the drawer easily.



3. To use liquid detergent, adjust the flap in right position, turn the flap down.



With the flap in the position **DOWN**:

- Do not use gelatinous or thick liquid detergents.
- Do not exceed to liquid detergent dose indicated on the flap.
- Do not set the prewash phase.
- Do not set the delay start function.

4. Measure out the detergent and the fabric conditioner.
5. Put back the drawer in the recess.
6. To use powder detergent again turn flap in the position **UP**

Make sure that the flap does not cause a blockage when you close the drawer.

SETTING A PROGRAMME

1. Turn the programme dial to select the desired washing programme.

The indicator of the Start/Pause ▷‖ button flashes. The display shows an indicative programme duration.

2. To change the temperature and/or the spin speed, touch the related buttons.
3. If desired, set one or more options by touching the related buttons. The related indicators illuminate on the display and the given information changes accordingly.

If a selection is **not possible** an acoustic signal sounds.

STARTING A PROGRAMME

Touch the Start/Pause ▷‖ button to start the programme. It is not possible to start the programme when the indicator of the button is off and doesn't flash (e.g. programme dial on a wrong position).

The related indicator stops flashing and stays on. The programme starts, the door is locked. The display shows the indicator 🔒.

The drain pump can operate shortly before the appliance fills water.

STARTING A PROGRAMME WITH THE DELAY START

1. Touch the Delay Start ▷‖ button repeatedly until the display shows the desired delay time. On the display the indicator shows 🕒

2. Touch the Start/Pause ▷‖ button. The appliance door locks and starts the countdown of the delay start. The display shows the indicator 🔒.

When the countdown is completed, the programme starts automatically.

Cancelling the delay start after the countdown has started

To cancel the delay start:

1. Touch the Delay Start 🕒 button repeatedly until the display shows the desired delay time. On the display the indicator shows 🕒

Touch the Start/Pause ▷‖ button. The appliance lock the door and starts the countdown of the delay start. The display shows the indicator 🔒.

When the countdown is completed, the programme starts automatically.

2. Touch the Start/Pause ▷‖ button to pause the appliance. The related indicator flashes.
3. Touch the Delay Start 🕒 button repeatedly until the display shows 🔓 and the indicator 🕒 goes off.
4. Touch the Start/Pause ▷‖ button again to start the programme immediately.

Changing the delay start after the countdown has started

To change the delay start:

1. Touch the Start/Pause ▷|| button to pause the appliance. The related indicator flashes.
2. Touch the Delay Start button repeatedly until the display shows the desired delay time.
3. Touch the Start/Pause ▷|| button again to start the new countdown.

THE AUTOADJUST SYSTEM LOAD DETECTION

After touching the Start/Pause ▷|| button:

1. The AutoAdjust System starts estimating the weight of the load to calculate the real programme duration. During this phase the FlexiTime bars ‾‾‾‾ placed below the time digits play a simple animation.
2. After about 15-20 minutes the FlexiTime bars disappear and new cycle duration is displayed. The appliance automatically adjusts the programme duration to the load to achieve perfect washing results in the minimum possible time.

The AutoAdjust System is not available with all programmes such as :Wool, Rinse, Spin and programmes with short cycles.

INTERRUPTING A PROGRAMME AND CHANGING THE OPTIONS

When the programme is running, you can change **only some** options:

1. Touch the Start/Pause ▷|| button.

The related indicator flashes.

2. Change the options. The given information in the display changes accordingly.
3. Touch the button Start/Pause ▷|| again.

The washing programme continues.

CANCELLING A RUNNING PROGRAMME

1. Press the button ON/OFF to cancel the programme and to deactivate the appliance.
2. Press the button ON/OFF again to activate the appliance.

If the AutoAdjust System has completed and the water filling has already started, the new programme starts **without repeating the AutoAdjust System**. The water and the detergent are not drained out in order to avoid waste.

There is also an alternative way of cancelling:

1. Rotate the selector knob to the "Reset" position • .

2. Wait for 1 second. The display shows ‾‾‾ . Now, you can set a new washing programme.

OPENING THE DOOR - ADDING GARMENTS

If the temperature and level of the water in the drum are too high and/or the drum is still rotating you should not open the door.

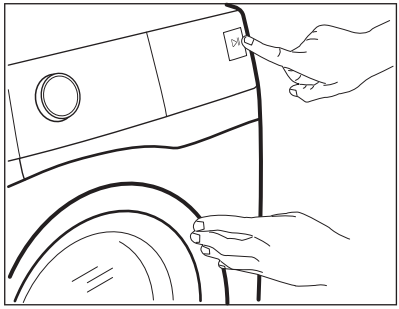
While a programme or the delay start operates, the appliance door is locked. The display shows the indicator 🔒.

1. Touch the Start/Pause ▷|| button.

In the display the related door lock indicator goes off.

2. Open the appliance door. If necessary, add or remove the items. Close the door and touch the Start/Pause ▷|| button.

The programme or the delay start continues.



END OF THE PROGRAMME

When the programme has finished, the appliance stops automatically. The acoustic signals operate (if they are active). The display shows 0:00

The indicator of the Start/Pause ▷|| button goes off.

The door unlocks and the indicator 🔒 goes off.

1. Press button ON/OFF to deactivate the appliance.

After five minutes from the end of the programme, the energy saving function automatically deactivates the appliance.

When you activate the appliance again, the display shows the end of the previous programme. Turn the programme dial to set a new cycle.

2. Remove the laundry from the appliance.
3. Make sure that the drum is empty.
4. Keep the door and the detergent dispenser slightly ajar to prevent mildew and odours.

DRAINING WATER OUT AFTER END OF CYCLE

If you have chosen a programme or an option that does not empty out the water of the last rinse, the programme is completed, but:

- The time area shows 0:00 and the display shows the door locked.
- The drum still turns at regular intervals to prevent creases in the laundry.
- The door stays locked.
- You must drain the water to open the door:

1. If necessary, touch the Spin button to decrease the spin speed proposed by the appliance.
2. Press theStart/Pause button:
   - If you have set Rinse Hold the appliance drains the water and spins.
   - If you have set Night the appliance only drains the water

The option indicator Rinse Hold disappears.

3. When the programme is completed and the door locked indicator goes off, you can open the door.
4. Press the ON/OFF button for a few seconds to deactivate the appliance.

STAND-BY FUNCTION

The Stand-by function automatically deactivates the appliance to reduce the energy consumption when:

- You do not use the appliance for 5 minutes when no programme is running.
  Press the button ON/OFF to activate the appliance again.
- 5 minutes after the end of the washing programme.
  Press the ON/OFF button to activate the appliance again.
  The display shows the end of the last programme.
  Turn the programme dial to set a new cycle.

If the dial is rotated to the "Reset" position •, the appliance automatically turns off in 30 seconds.

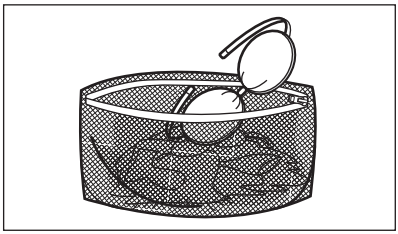
If you set a programme or an option that ends with water in the drum, the Stand-by function **doesn't deactivate** the appliance to remind you to drain the water.

HINTS AND TIPS

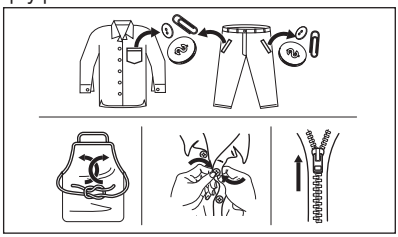
WARNING! Refer to Safety chapters.

THE LAUNDRY LOAD

- Divide the laundry into: white, coloured, synthetics, delicates and wool.
- Follow the washing instructions on the laundry care labels.
- Do not wash white and coloured items together.
- Some coloured items can discolour with the first wash. We recommend that you wash them separately for the first couple of times.
- Turn multilayered fabrics, wool and items with printed illustrations inside out.
- Pre-treat stubborn stains.
- Wash stubborn stains with a special detergent.
- Be careful with curtains. Remove the hooks and put the curtains in a washing bag or pillowcase.
- A very small load can cause balance problems with the spin phase leading to excessive vibration. If this occurs:
  a. interrupt the programme and open the door (refer to "Daily Use" chapter);
  b. manually redistribute the load so that the items are spaced evenly around the tub;
  c. press the Start/Pause button. The spin phase continues.
- Avoid washing garments full of long animal hair or poor quality garments releasing lots of fluff that could block the drain circuit and therefore requiring the Service assistance.
- Button up pillowcases, close zippers, hooks and poppers. Tie up belts, cords, shoelaces, ribbons and any other loose elements.
- Do not wash laundry without hems or with cuts. Use a washing bag to wash small and/or delicate items (e.g. underwired bras, belts, tights, shoelaces, ribbons, etc.).



- Empty pockets and unfold the items.



STUBBORN STAINS

For some stains, water and detergent is not sufficient.

We recommend that you pre-treat these stains before you put the items in the appliance.

Special stain removers are available. Use the special stain remover that is applicable to the type of stain and fabric.

DETERGENT TYPE AND QUANTITY

The choice of detergent and use of correct quantities not only affects your wash performance, but also helps to avoid waste and protect the environment:

- Use only detergents and other treatments specially made for washing machines. First, follow these generic rules:
  - powder detergents for all types of fabric, excluding delicate. Prefer powder detergents containing bleach for whites and laundry sanitization,
  - liquid detergents, preferably for low temperature wash programmes (60 °C max) for all types of fabric, or special ones for woollens only.
- The choice and quantity of detergent will depend on: type of fabric (delicates, woollens, cottons, etc), the colour of clothes, size of the load, degree of soiling, wash temperature and hardness of the water used.
- Follow the instructions that you find on packaging of the detergents or other treatments without exceeding the indicated maximum level (**MAX**).
- Do not mix different types of detergents.
- Use less detergent if:
  - you are washing a small load,
  - the laundry is lightly soiled,
  - there is large amounts of foam during washing.
- When using detergent tabs or pods, always put them inside the drum, not in the detergent dispenser.

Insufficient detergent may cause:

- unsatisfactory washing results,
- the wash load to turn grey,
- greasy clothes,
- mould in the appliance.

Excessive detergent may cause:

- sudsing,
- reduced washing effect,
- inadequate rinsing,
- a greater impact for the environment.

ECOLOGICAL HINTS

To save water, energy and to help protect the environment, we recommend that you follow these tips:

- **Normally soiled laundry** may be washed **without prewash** in order to save detergent, water and time (the environment is protected too!).
- Loading the appliance to the **maximum capacity indicated for each programmes helps to reduce energy and water consumption**.
- With adequate pre-treatment, stains and limited soiling can be removed; the laundry can then be washed at a lower temperature.
- To use the correct quantity of detergent, refer to the quantity suggested by the detergent producer and check the water hardness of you domestic system. Refer to 'Water hardness'.
- Set the **maximum possible spin speed** for the selected washing programme **before drying your laundry in a tumble dryer**. This will save energy during drying!

WATER HARDNESS

If the water hardness in your area is high or moderate, we recommend that you use a water softener for washing machines. In areas where the water hardness is soft it is not necessary to use a water softener.

To find out the water hardness in your area, contact your local water authority.

Use the correct quantity of water softener. Follow the instructions that you find on the packaging of the product.

ALARM CODES AND POSSIBLE FAILURES

The appliance does not start or it stops during operation. First try to find a solution to the problem (refer to the tables).

WARNING! Deactivate the appliance before carrying out any check.

With some problems, the display shows an alarm code and the Start/ Pause ▷‖ **button may flash continuously:**

Problem	Possible solution
E 10 The appliance does not fill with water properly.	▪ Make sure that the water tap is open. ▪ Make sure that the pressure of the water supply is not too low. For this information, contact your local water authority. ▪ Make sure that the water tap is not clogged. ▪ Make sure that the inlet hose has no kinks, damages or bends. ▪ Make sure that the connection of the water inlet hose is correct. ▪ This problem may be also caused by the clogged drain circuit. Please contact the Authorised Service Centre. ▪ Make sure that the filter of the inlet hose and the filter of the valve are not clogged. Refer to 'Care and cleaning'.
E20 The appliance does not drain the water.	▪ Make sure that the sink spigot is not clogged. ▪ Make sure that the drain hose has no kinks or bends. ▪ This problem may be caused by the clogged drain circuit. Please contact the Authorised Service Centre. ▪ Make sure that the connection of the drain hose is correct. ▪ Set the drain programme if you set a programme without drain phase. ▪ Set the drain programme if you set an option which ends with water in the tub.
E40 The appliance door is open or not closed correctly.	▪ Make sure that the door is properly closed.
E91 Internal fail. No communication between electronic elements of the appliance.	▪ The programme was not finished properly or the appliance stopped too early. Switch the appliance off and on again. ▪ If the alarm code appears again, contact the Authorised Service Centre.
EH0 The mains supply is unstable.	▪ Wait until mains supply is stable.

If the display shows other alarm codes, deactivate and activate the appliance. If the problem continues, contact the Authorised Service Centre.
In case of different problem with the washing machine check the table below for possible solutions.

Problem	Possible solution
The programme does not start.	▪ Make sure that the mains plug is connected to the mains socket. ▪ Make sure that the appliance door is closed. ▪ Make sure that there is no damaged fuse in the fuse box. ▪ Make sure that the Start/Pause ▷‖ has been touched. ▪ If the delay start is set, cancel the setting or wait for the end of countdown. ▪ Deactivate the Child Lock function if it is on. ▪ Check the position of the knob on the selected programme.
The appliance fills with water and drains immediately.	▪ Make sure that the drain hose is in the correct position. The hose may be positioned too low. Refer to "Installation instruction".
The spin phase does not operate or the washing cycle lasts longer than usual.	▪ Set the spin programme. ▪ This problem may be caused by the clogged drain circuit. Please contact the Authorised Service Centre. ▪ Adjust manually the items in the tub and start the spin phase again. This problem may be caused by balance problems.
There is water on the floor.	▪ Make sure that the couplings of the water hoses are tight and there is not water leakages. ▪ Make sure that the water inlet hose and the drain hose have no damages. ▪ Make sure you use the correct detergent and the correct quantity of it.
You cannot open the appliance door.	▪ Make sure that a washing programme that ends with water in tub, has not been selected. ▪ Make sure that the washing programme is finished. ▪ Set the drain or the spin programme if there is water in the drum. ▪ Make sure that the appliance receives electrical power. ▪ This problem may be caused by a failure of the appliance. Contact the Authorised Service Centre.
The appliance makes an unusual noise and vibrates.	▪ Make sure the levelling of the appliance is correct. Refer to "Installation instruction". ▪ Make sure that the packaging and/or the transit bolts are removed. Refer to "Installation instruction". ▪ Add more laundry in the drum. The load may be too small.
The programme duration increases or decreases during programme execution.	▪ The AutoAdjust System is able to adjust the programme duration according to the type and the laundry load size. Refer to "The AutoAdjust System load detection" in "Daily Use" chapter.
The washing results are not satisfactory.	▪ Increase the detergent quantity or use a different detergent. ▪ Use special products to remove the stubborn stains before you wash the laundry. ▪ Make sure that you set the correct temperature. ▪ Decrease the laundry load.
Too much foam in the drum during the washing cycle.	▪ Reduce the quantity of detergent.

Problem	Possible solution
After the washing cycle, there are some detergent residues in the dispenser drawer.	▪ Make sure that the flap is in the correct position (UP for powder detergent - DOWN for liquid detergent). ▪ Make sure you have used the detergent dispenser according the indications given in this user manual.

After the check, activate the appliance. The programme continues from the point of interruption.
If the problem occurs again, contact the Authorised Service Centre.
The necessary data for the service centre are on the rating plate.

CARE AND CLEANING

WARNING! Refer to Safety chapters.

PERIODIC CLEANING SCHEDULE

Periodic cleaning helps to extend the life of your appliance.

After each cycle, keep the door and the detergent dispenser slightly ajar to get air circulation and dry the humidity inside the appliance: this will prevent mildew and odours.

If the appliance is not used for a long time: close the water tap and unplug the appliance.

Indicative periodic cleaning schedule:

Descaling	Twice a year
Maintenance wash	Once a month
Clean door seal	Every two months
Clean drum	Every two months
Clean detergent dispenser	Every two months
Clean the inlet hose and the valve filter	Twice a year

The following paragraphs explain how you should clean each part.

REMOVING FOREIGN OBJECTS

Make sure that pockets are empty and all loose elements are tied up before running your cycle. Refer to "The laundry load" in "Hints and tips".

Remove any foreign objects (such as metal clip, buttons, coins, etc) that you may find in the door seal, the inlet hose filter and the drum. Refer to "Door seal with double lip trap", "Cleaning the drum" and "Cleaning the inlet hose and the valve filter" paragraphs. If necessary, please contact the Authorised Service Centre.

EXTERNAL CLEANING

Clean the appliance with mild soap and warm water only. Fully dry all the surfaces. Do not use a scouring pads or any scratching material.

CAUTION! Do not use alcohol, solvents or chemical products.

CAUTION! Do not clean the metal surfaces with chlorine-based detergent.

DESCALING

If the water hardness in your area is high or moderate, we recommend that you use a water descaling product for washing machines.

Regularly examine the drum to check for limescale.

Regular detergents already contain water softening agents, but we recommend to run a cycle with an empty drum and a descaling product occasionally.

Always follow the instructions that you find on the packaging of the product.

MAINTENANCE WASH

The repeated and prolonged use of low temperature programmes can cause detergent deposits, fluff residues, bacterial growth inside the drum and the tub. This could generate bad odours and mildew. To eliminate these deposits and clean

the inner part of the appliance, run a maintenance wash regularly (at least once a month).

Refer to "Cleaning the drum" paragraph.

CLEANING THE DRUM

Regularly examine the drum to prevent unwanted deposits.

Rust deposits in the drum may occur due to rusting foreign body in the washing or tap water containing iron

Clean the drum with special products for stainless steel.

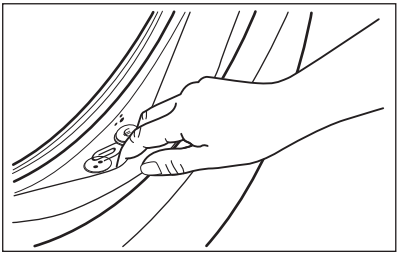
Always follow the instructions that you find on the packaging of the product. Do not clean the drum with acidic descaling products, scouring products containing chlorine or iron or steel wool.

For a thorough clean:

1. Remove all laundry from the drum.
2. Run a Cottons programme with the highest temperature.
3. Add a small quantity of powder detergent into the empty drum, in order to rinse out any left residues.

Door seal with double lip trap

This appliance is designed with a **self cleaning draining system**, allowing light fluff fibers that fall off the clothes to be drained out with the water. Regularly examine the seal. Coins, buttons, other small items can be recovered at the end of the cycle.



Clean it when needed, using ammonia cream cleanser agent without scratching the seal surface.

Always obey the instructions that you find on the packaging of the product.

CLEANING THE DETERGENT DISPENSER

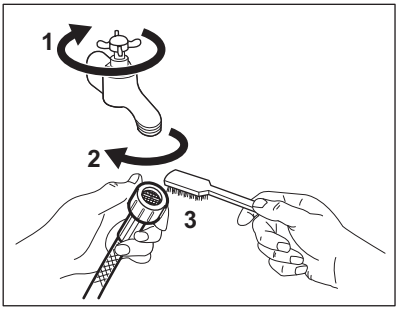
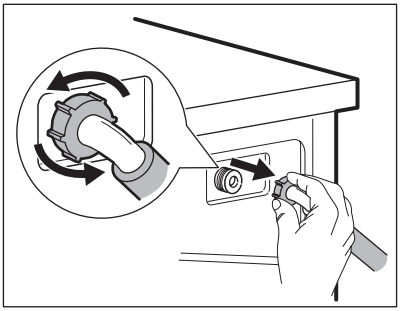
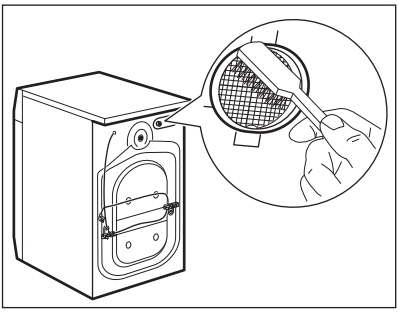
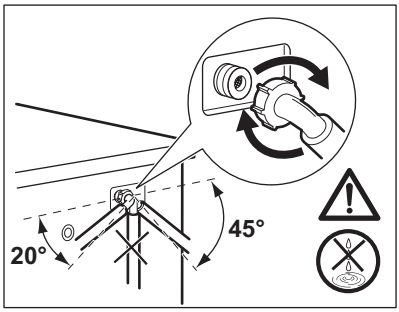
CLEANING THE INLET HOSE AND THE VALVE FILTER









EMERGENCY DRAIN

If the appliance cannot drain the water, carry out the same procedure, described in 'Cleaning the drain pump' paragraph. If necessary, clean the pump.

FROST PRECAUTIONS

If the appliance is installed in an area where the temperature can reach values around 0° C or drop below, remove the remaining water from the inlet hose and the drain pump.

1. Disconnect the mains plug from the mains socket.
2. Close the water tap.
3. Put the two ends of the inlet hose in a container and let the water flow out of the hose.
4. Empty the drain pump. Refer to the emergency drain procedure.
5. When the drain pump is empty, install the inlet hose again.

WARNING! Make sure that the temperature is higher than 0 °C before you use the appliance again. The manufacturer is not responsible for damages caused by low temperatures.

TROUBLESHOOTING

WARNING! Refer to Safety chapters.

CONSUMPTION VALUES

INTRODUCTION

See the web link **www.theenergylabel.eu** for detailed information about Energy Label.

The QR codes on the EU and UK energy labels supplied with the appliance provide a web link to the information related to the performance of the appliance. For the energy label with the EU flag, it is also possible to find the information in the EU EPREL database using the link https://eprel.ec.europa.eu and the model name and product number that you find on the rating plate of the appliance. Refer to 'Product description' chapter for the position of the rating plate. Keep the energy labels for reference together with the user manual and all other documents provided with this appliance.

LEGEND

kg	Laundry load.	**hh:mm**	Programme duration.
kWh	Energy consumption.	**°C**	Temperature in the laundry.
Litres	Water consumption.	**rpm**	Spin speed.
%	Remaining moisture at the end of spinning phase. The higher is the spin speed, the higher is the noise and the lower is the remaining moisture.		

Values and programme duration may differ depending on different conditions (e.g. room temperature, water temperature and pressure, load size and type of laundry, supply voltage) and also if you change the default setting of a programme.
