1. Executive Summary

This sustainability statement has been commissioned by Miller Homes Southern Ltd in respect of a site-wide development proposal for Boorley Gardens, Hedge End. The full proposal included the construction of 323 dwellings to respond to local planning authority, Borough of Eastleigh Council's policy and guidance, all of which is promoting low carbon development. The following Essential Requirements apply:

- ESD1: General Sustainable Development, the Council requires all residential development to achieve Level 4 of the Code from January 2012.
- ESD2: Rainwater Harvesting/ Grey Water Recycling (not applicable to houses)
- ESD3: External Water Consumption (residential only)
- ESD4: Reducing Surface Water Runoff
- ESD5: Passive Solar Heat Gain
- ESD6: Carbon Dioxide Reduction (small scale zero/low carbon technologies), a minimum 15% reduction in CO_2 emissions through local low/zero carbon energy, in line with the Council's Environmentally Sustainable Development SPD (15% required from 2012)
- ESD7: Green Roofs (not applicable to houses)
- ESD8: Trees

The purpose of this report is to demonstrate, through site-wide calculations, that the Boorley Gardens development as a whole achieves compliance with the requirements of Planning Permission Ref: O/15/75953 (as amended by X/19/84943), specifically conditions 29, 30, 31 and 32. Compliance is assessed on a site-wide average basis across all 323 dwellings and all Miller Homes phases. The headline performance is set out in Section 5 (Conclusion); the supporting breakdown by phase and plot is provided in Appendix A, and the related discharge of condition application history is summarised in Section 2 below.

Across the development as a whole, the design and as-built calculations confirm a site-wide average reduction of 40.46% in carbon emissions over the 2013 Building Regulations target, with photovoltaic installations delivering a site-wide renewable energy contribution of 29.80% — comfortably exceeding the 15% minimum required under ESD 6 and the Code for Sustainable Homes Level 4 target set by Condition 28. The full per-plot tabulation is provided in Appendix A for completeness.

2. Information and Background

This Energy Strategy has been produced to identify the design stage evidence in accordance with Eastleigh Borough Council in accordance with ESD 1, 3, 6 and 8.

2.1 Phase and Condition Discharge Matrix

The Boorley Gardens development is being delivered by Miller Homes Southern across multiple phases (Phase 1E plots 199–210 and 220–260; Phase 2C; Phase 1H; Phase 1I; Phase 3A; Phase 3B). This Issue 4 is a single combined report covering all phases and addressing conditions 29, 30, 31 and 32 together for the development, in line with the methodology agreed with the LPA. Compliance is demonstrated on a site-wide average basis (see Section 5), with full per-plot calculations provided in Appendix A.

In summary:

	Comments	**Evidence**
ESD 1	Developer has committed to achieving a Code Level 4 in the Code for Sustainable Homes	**Design SAP** Calculations (Appendix B & Design & As Built Summary Appendix A).
ESD 2	Submit details of the rainwater harvesting and/or grey water recycling systems supplying all WC flushing and other appropriate uses for that development	ESD 2 is not applicable due to the nature of the development. As confirmed at the planning stage.
ESD 3	Code compliant Water Butts are allocated to all dwellings. One and two bedroom homes will be provided with water butts of minimum 150 litre capacity. A separate application for discharge of condition 11 will be made and that with the work done at RM will satisfy the requirements of ESD 4.
ESD 5	Solar gain – The development should make full use of potential passive solar heat gain through orientation, building design and landscape design (while avoiding excessive summer heat gain and glare) within a framework of good urban design unless there are particular site or building use factors which make it unfeasible	This is addressed in the Design and Access Statement and the update which was approved at grant of Reserved Matters for these plots.
ESD 6	10 or more houses to achieve: • Up to the end of 2011 at least one Code Ene 7 credit (10% carbon dioxide emissions reductions via local low/zero carbon energy) • From January 2012 two Code Ene 7 credits (15% carbon dioxide emissions reductions via local low/zero carbon energy)	PV Schedule and PV site layout is included within Appendix E.
ESD 7	Green roofs	ESD 7 is not applicable due to the nature of the development. As confirmed in at the planning stage.

2.1 Planning Condition

The Eastleigh Borough Council Environmental Sustainable Development Supplementary Planning Document was adopted in March 2009 and sets measures to respond to the declared climate emergency. The specific planning conditions for the development are detailed below:

"CONDITION 28 REQUIRES:
In respect of energy efficiency, a standard of a 19% improvement of dwelling emission rate over the target emission rate as set in the 2013 Building Regulations being equivalent to and not exceeding the requirement as set by Code Level 4 (as defined by ENE1) in the, now revoked, Code for Sustainable Homes (or equivalent requirements that are set out in national legislation or policy).

In respect of water consumption, a maximum predicted internal mains water consumption of 105 litres/person/day, i.e. the equivalent requirement as set by Code Level 4 (as defined by WAT1) in the, now revoked, Code for Sustainable Homes (or equivalent requirements that are set out in national legislation or policy). This is a performance condition which sets limits and does not require a submission. The ways in which this are achieved are set out in the response to condition 29."

CONDITION 29 REQUIRES:
''Prior to the construction of any building above slab level in each individual phase of the development (or, in accordance with a timetable to be agreed in writing with the LPA), a BREEAM New Construction Interim Stage Certificate at ''excellent'' standard (for non-residential development); or (for residential development) design stage SAP data and a design stage water calculator confirming energy efficiency and the predicted internal mains water consumption shall be submitted to and approved in writing by the LPA. The development shall not be carried out otherwise than in accordance with the approved details.''

CONDITION 30 REQUIRES:
Prior to the construction of any dwelling above slab level in each individual phase of the development (or, in accordance with a timetable to be agreed in writing by the LPA) a report shall be submitted to and approved in writing by the LPA which sets out how essential requirements set out within ESD 2-8 of Eastleigh Borough Council's Environmentally Sustainable Development SPD will be met within that phase. The development shall not be carried out otherwise than in accordance with the approved details.

OUTLINE PLANNING CONDITION 31 REQUIRES:
"Prior to the first occupation of each type of building within each phase a (for residential development) an as built stage SAP data, and an as built stage water calculator confirming energy efficiency and the predicted internal mains water consumption; which shall meet the requirements set out in condition 24 above; shall be submitted to and approved in writing by the LPA. The development shall not be carried out otherwise than in accordance with the approved details."

OUTLINE PLANNING CONDITION 32 REQUIRES:
"Prior to the first occupation of each type of building within each phase of development a report highlighting how the essential requirements set out within ESD2-8 of the Eastleigh Borough Council's adopted Environmentally Sustainable Development SPD, set out by condition 26 above, have been achieved in that phase of the development shall be submitted to and approved in writing by the LPA. The development shall not be carried out otherwise than in accordance with the approved details."

3. Energy Efficiency

A fabric first approach has been adopted to minimise energy demand as much as practical. Energy efficiency features that were proposed include: Built form, Insulation standards, Glazing, Heating systems, Ventilation, Lighting, and Controls.

Three main sources of heat loss:

- Thermal Envelope
- Thermal Bridging
- Uncontrolled Air Leakage

3.1 Thermal Envelope

The table below summarises the proposed performance of the thermal envelope. It is proposed that all areas significantly improve upon the minimum building fabric standards stated within BR Part L 2013.

Thermal Element	BR U-value (Part L 2013) W/m²K	Proposed target values (Block A) W/m²K	% Improvement over BR 2013 (Block A)
Ground Floor	**0.25**	**0.19**	**31%**
External wall	**0.30**	**0.27**	**11%**
Cold roof	**0.20**	**0.11**	**45%**

Table 1 – Design Fabric Standard

The fabric specification shows an improvement on BR 2013 standards and are conducive to energy efficiency within built form and insulation standards.

3.2 ESD 1 Assessment

The development has been designed to meet the requirements of Part L1A of the 2013 Building Regulations, forming the foundation of its sustainable construction approach.

Compliance with Part L is assessed through the Standard Assessment Procedure (SAP), using the 'Target Emission Rate' (TER), expressed in kilograms of CO_2 per square meter of total useful floor area per annum, as the benchmark. The designed performance of each dwelling—referred to as the Dwelling Emission Rate (DER)—must be lower than this benchmark.

In addition, the local council requires all residential developments of 10 or more dwellings to achieve Code Level 4, equivalent to a 19% improvement over current building regulations. The tables below summarise the "as-designed" and 'as-built' percentage reduction in TER achieved across the Miller Homes Phases as modelled using SAP 2012. The design SAP calculations, including a plot-by-plot summary of performance, are provided in Appendix A.

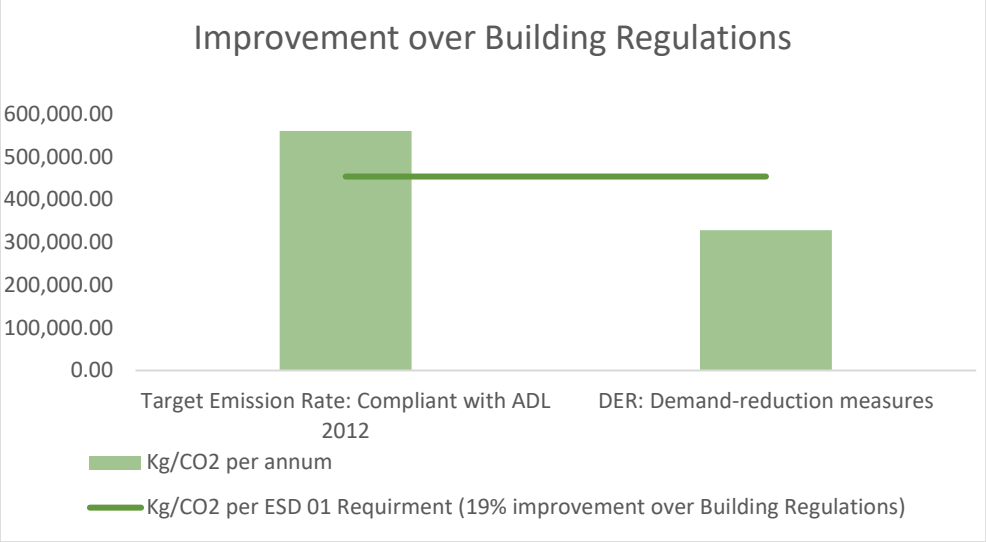
Table 2 - Part L compliant CO_2 Emissions

The development exceeds the target of a 19% improvement over building regulations, as shown in Graph 1 below. A full summary of the design stage SAP calculations is included in Appendix B, with plot-specific details demonstrating compliance for all plots in Appendix A.



Graph 1 - Site improvement over building regulations V. ESD requirements

As demonstrated the site has been calculated to provide a significant improvement over building regulations and the minimum ESD requirements, with a total of 40.46% improvement achieved.

Note: As agreed with the LPA, this report is a combined design-stage and as-built submission covering all phases. The figures in the ESD 1 table above therefore reflect the as-built position for plots already completed and the design-stage position for plots not yet built; the same combined approach applies to the water calculations in Section 4 and the appendices. Conditions 29, 30, 31 and 32 are addressed together within this single report, in line with the combined-submission methodology set out in Section 2.

3.3 ESD 6 Carbon Dioxide Reduction (Small Scale zero/low carbon technologies Site Assessment

Under the Code for Sustainable Homes, one credit is awarded for achieving a 10% reduction in carbon dioxide emissions through the use of local low or zero carbon (LZC) energy sources. Two credits can be earned by achieving a 15% reduction. The site-wide reduction in carbon emissions was achieved through the installation of photovoltaic panels by an MCS-registered contractor, resulting in a 29.80% CO_2 reduction, as calculated using the Code for Sustainable Homes methodology.

4. Water Efficiency

In accordance with Eastleigh Borough Council Environmentally Sustainable Development Supplementary Planning it is proposed that all dwellings achieve a minimum water efficiency standard of 105 litres/person/day as set out in Building Regulations Part G. The following maximum water consumption criteria, as stated in table 2.2 of approved document Part G has been followed, see Table 4 below.

Water Fitting	Maximum Consumption	Specification
WC	4/2.6 litres dual flush	Ideal Standard Close coupled cistern 4/2.6 litre dual flush
Shower	8 l/min	Vado Celsius with FR/shower/8-PLA
Bath	181 litres	Ideal Standard Tempo Arc

Dishwasher	1.25 l/place setting	No dishwasher or base unit; plumbing & electric point to space only
Washing Machine	8.17 l/kilogram dry load	Not provided; plumbing & electric point to space only

Table 4 - (Part G2 Table 2.2) Maximum fittings consumption

The code for sustainable homes calculator tool has been completed within Appendix B and has confirmed a flow rate of 99.5 l/p/d using the design specifications and manufacturers' information which is included within Appendix F.

Miller Homes offers customers the option to include washing machine and/or dishwashers as part of the optional extras package. However, not all purchasers choose to take up these options. To reflect this, the water efficiency calculations within this report cover all scenarios. A summary can be found in Table 5 and full calculations for each house type and scenario can be seen in Appendix C. As the calculations demonstrate, even under worst case assumptions (without white goods included), all unit types achieve compliance with water efficiency targets set by Eastleigh Borough Council. The inclusion of efficient appliances further improves performance. Miller Homes has therefore taken all reasonable measures to ensure policy compliance, regardless of purchaser choices. The Water Calculations in Appendix C, and the figures in Tables 4 and 5, reflect both Design Stage and As-Built information. The water calculator submitted with this report follows the standard methodology of excluding optional white goods (washing machines and dishwashers) from the baseline calculation, in line with Part G default assumptions (washing machines and dishwashers) from the baseline calculation, in line with Part G default assumptions; this applies to both the design-stage figures (for plots not yet built) and the as-built figures (for plots already completed) presented in this combined report.

5. Conclusion

This Energy and Sustainability Statement has been prepared by SEES Ltd on behalf of Miller Homes, covering a total of 323 dwellings across all Miller Homes phases of the Boorley Gardens development. The specific phases included are:

- Site Wide Phase 2C – Plots 355–444 (phase ongoing)
- Phase 1H – 33 dwellings (Plots 103–135)
- Phase 1I – 57 dwellings (Plots 136–192)
- Phase 3A (3D) (RM3) – Plots 445–462 & 668
- Phase 3B – Plots 659–667 & 669–680.
- Phase 1E – Plots 199–210 and 220–260

Taken as a whole, the development achieves the compliance thresholds set by policies ESD 1, 3, 6 and 8 of the Eastleigh Borough Council's Environmentally Sustainable Development Supplementary Planning Document. Compliance is assessed on a site-wide average basis across the 323 dwellings, in line with the combined design-stage and as-built methodology agreed with the LPA.

The development incorporates enhanced fabric specifications that go beyond SAP 2021 standards, including:

- Fabric-first design to reduce space heating demand.
- High-specification thermal envelope to minimise heat loss.
- Thermal bridging minimisation through Constructive Details and bespoke calculations.
- Enhanced airtightness to improve overall energy efficiency.

The calculations confirm a site-wide average reduction of 40.46% in carbon emissions over the 2013 Building Regulations target, well in excess of the 19% Code Level 4 requirement under Condition 28. Photovoltaic installations, fitted by an MCS-certified contractor, deliver a site-wide renewable energy contribution of 29.80%, comfortably exceeding the 15% minimum required under ESD 6. Individual plot variations around these averages are tabulated in Appendix A; the development as a whole meets and exceeds every quantitative threshold set by the planning conditions and the SPD.

This development demonstrates a strong commitment to sustainability and carbon reduction, aligning with both local and national environmental policies and setting a benchmark for low-carbon residential projects.
