

Ecology response for H/26/102030 WOODPECKERS, BLIND LANE, HORTON HEATH, EASTLEIGH, SO30 2HJ

Two storey side extension to form granny annexe and erection of detached garage to front garden

Charlie Vallis

15/9/26

This site is on the boundary between a green and an amber impact risk zone for great crested newts. There are records of bats and badgers nearby with hedgehogs in the wider area.

When development falls into the red or amber zones on the impact risk map, developers MUST prove to their local planning authorities that their development plans pose 'no risk' to great crested newts.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Photos of any areas of the garden affected by the proposal are also required.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
