

Ecology response 28/9/26 for H/26/102067 35 MORTIMERS LANE, FAIR OAK, EASTLEIGH,
SO50 7BH

Single storey rear extension, internal reorganisation, part conversion of the garage and additional door to the eastern elevation.

Gina Aftanas

28/9/26

No objection.

I have reviewed the site photos. The rear garden is existing hardstanding with adjacent amenity lawn. I don't see any obvious potential bat roost features or habitat for great crested newts, hedgehogs or grass snakes on site. Biodiversity enhancements can be agreed before determination or can be conditioned.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

A precautionary working method must be used to prevent harm to wildlife that could be using this site. It should include:

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

22/9/26

This site is in an amber impact risk zone for great crested newts. There is a watercourse on site with associated flood risk.

There are nearby records of bats and a grass snake, with records of badgers, hedgehogs and nesting swifts in the wider area.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Photos of any areas of the garden affected by the proposal are also required.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
