

Ecology response 6 10 26 for H/26/102096 9 WESTFIELD ROAD, CHANDLER'S FORD,
EASTLEIGH, SO53 3GT

Single storey side extension and part new boundary fence.

Gina Aftanas

6/10/26

I have reviewed the site photos and do not see any potential habitat for hedgehogs, however any new boundary fencing must include at least two hedgehog holes (13 x 13 cm minimum) in the baseboards of any closed board fences to allow the free passage of small mammals through the garden.

No objection.

There are records of bats and hedgehogs near this site.

A precautionary working method must be used to prevent harm to wildlife that could be using this site. It should include:

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
