

Ecology response 7 10 26 for H/26/101838 32 KINGSWAY GARDENS, CHANDLER'S FORD, EASTLEIGH, SO53 1FE

Proposed first floor front extension with cladding to upper floor, alterations to fenestration with roof alterations

Alexandra Stone

7/10/26

I have reviewed the site photos and do not see any obvious potential bat roost features. The hanging tiles on the front elevation appear to be in good condition but all tiles on the front and the roof should be removed one at a time by hand.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats or signs of bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

A bat box should be added to the building as explained in previous advice.

Ecologist

18/8/26

There are records of bats and hedgehogs very close to this site with nesting swifts in the wider area.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Any vegetation to be removed to facilitate the development must be removed outside of bird nesting season (which is usually between the beginning of March and the end of August). If this is not possible then vegetation can be cleared only after being checked for nesting birds by a suitably qualified ecologist up to 24 hours before the start of works. If any active nests are found, work must stop, and a 5 m buffer must be erected around the nest to protect it from disturbance until after the birds have fledged and left the nest.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the

sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk › our-work › putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
