

Ecology response for H/24/96700 37 RANDALL ROAD, CHANDLER'S FORD, EASTLEIGH, SO53 5AJ

Single storey rear extension, demolition of existing conservatory

Alex Stone

25/1/24

There are records of bats in the immediate vicinity of this site, with hedgehogs and nesting swifts in the wider area. The tree constraints plan shows that T07, a common oak with a dead branch and hollowing could be affected by this proposal. This tree must be checked by a suitably qualified ecologist using an endoscope to determine whether there are any potential bat roost features, and whether bats have been using this tree. Light spill from the new extension could affect roosting bats. A preliminary bat roost assessment of the tree and the rear elevation of the house is required. As this proposal will not affect the roof, an internal inspection is not necessary.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
