Subject: Updated Parking Survey

Good Morning Rebecca,

I note that there has been an updated parking survey added to the application in the last week. Are you able to accept comments on this as this has been added after the objection deadline?

If so I would like to point out that Priory Road also cannot accept parking on both sides of the road. None of the local roads can otherwise the same issues as described on Queens View will be applicable.

I also query the spaces they have indicated as being useable this close to the junction along Queens View.

Cars parked on the bend on Queens View, alongside the junction with Castle Road make this difficult to navigate. When cars are parked here now its difficult to make your way along Queens View at this point as you can't see what coming from round the corner until you are past the bend. If these spaces are full you are head on, to oncoming traffic, who are on the wrong side of the road because their side is occupied by parked cars. These are not suitable and safe parking spaces this close to the junction and there have been several near misses here.

In addition, the highway code states 'do not park opposite or within 10 metres of a junction' so surely this space shouldn't be counted as available space on the maps close to any of the junctions? There are several blue lines on the map that run the full way to the junctions shown the area used for the calculations and also opposite junctions.

Also, it looks like only one photograph from the additional set of pictures I sent has been uploaded. Is it possible for the others to be added please?

Many thanks for your assistance with this.

Kind regards, Hanna.
