

Ecology response for H/24/96746 12 PITMORE ROAD, EASTLEIGH, SO50 4LW

Proposed single storey side extension

Alex Stone

16/2/24

This site is in a red great crested newt impact risk zone. There are records of bats, nesting birds, common toads, lesser spearwort nearby and otters and water voles recorded along the River Itchen.

I don't see any potential bat roost features on the side of the house visible on the aerial photo on Google maps and the garden is fully fenced and not likely to provide habitat for any of these species.

I note that the proposed extension will use up almost all of the existing outdoor space around this house but there is a garden area to the south of the house which if it is part of this property, may be able to be enhanced.

Should you be minded to permit this extension, biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
