Findings: Please refer to the above table and the included site map for those trees that we have identified as needing attention. For easy identification a picture of the tree's needing attention are included at the end of the report.

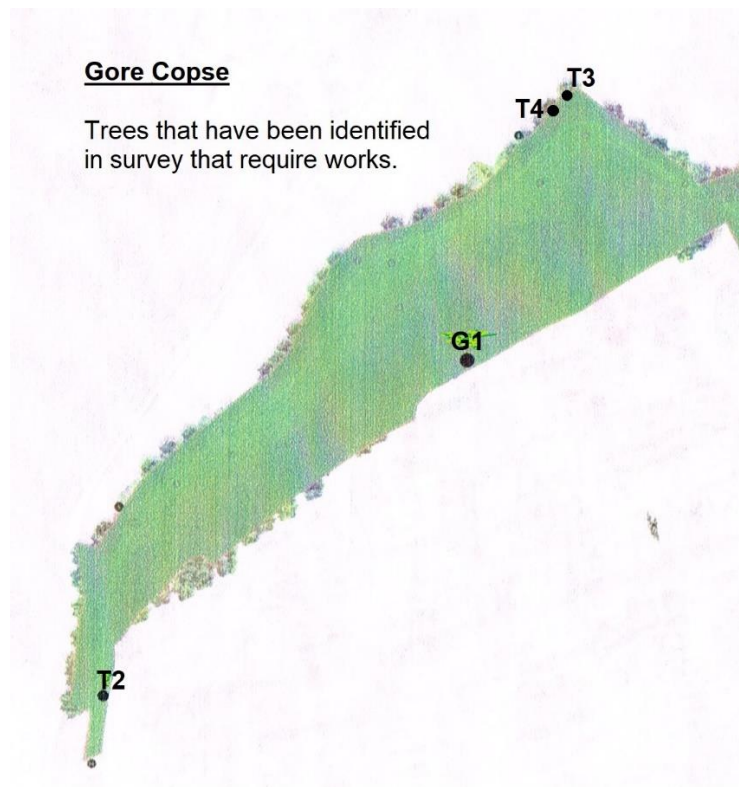

Recommendation: We recommend that the trees are re-surveyed professionally in 12-18 months' time, and if at any time unexplained changes in their health and vitality are noted before the next survey, you will need to seek further advice as to what might be an appropriate course of action.

If you require any further information at this stage, please do not hesitate to contact us.

Yours sincerely

Ivan Hinsley
