

Ecology response for F/24/96888 70 STATION ROAD, NETLEY ABBEY, SOUTHAMPTON, SO31 5AF

Conversion of first floor area of church meeting facility to a two bedroom self contained flat with associated elevational alterations and extension to existing access ramp

David Huckfield

29/2/24

There are records of bats very close to this site. I have reviewed the photo of the building on Google maps and do not see any obvious potential bat roost features which would be affected by this proposal. The loft is not proposed to be affected by this work.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
