

Ecology response for H/24/96873 ANNEXE, 62 CHESTNUT AVENUE, EASTLEIGH, SO50 5AL

3m single storey extension

Alex Stone

4/3/24

There are records of bats very close to this site, but I have reviewed the photos of the building on Google maps and don't see any obvious potential bat roost features on this building.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate but would need to be added to number 62, as it is taller than 62a. If this proposal is permitted, the amenity space available will be quite small, so a vertical garden/green wall might be another option for this space.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
