Retention of 14no. Solar panels to the roof of the property

Alex Stone

25/3/24

There are records of bats and nesting swifts in this area. I have no ecological objection to retention of the solar panels. As a biodiversity enhancement, a swift nest box or a bat box may be able to be installed on the relevant elevation of the house.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
