

Ecology response amended for H/24/96840 24 HOBBS LANE, HEDGE END, SOUTHAMPTON, SO30 0GJ

Alterations to roof, from flat to pitch roof, including external alteration and erection of outbuilding

Alex Stone

28/3/24

I have reviewed the site photos and do not see any obvious potential bat roost features or habitat in the garden that would be affected by these proposals.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

There are records of bats very close to this site and the proposal will affect the roof.

The existing dormers have hanging tiles, so close up photos of all aspects of the roof, soffits, fascias and flashings are required. I also need to see photos of any areas of the garden which would be affected by the erection of an outbuilding.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
