

Ecology response for F/24/96999 The Stables, Grange Road, Southampton, Eastleigh, SO31 8GD

Retention of replacement roof to the stable building and removal of the rear (northwest) dormer (Resubmission of application F/23/95495).

David Huckfield

2/4/24

Since this is a retrospective application and the roof has already been replaced, if bats or nesting birds had been present, they would have been affected by the original works to the roof and dormer. Biodiversity enhancements will be required.

If the dormer is to be removed or any work done to the roof, please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

The elevation drawings show that this building would be appropriate for both bat roost boxes (side elevation facing south) and bird nest boxes (swift boxes on side elevation facing east) as biodiversity enhancements. No external lighting must be shining on these elevations to avoid disturbance to these species.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
