

Ecology response for H/24/96966 3 THE HEATHERS, EASTLEIGH, SO50 5JZ

Retention of hardie plank cladding in anthracite grey on rear dormer.

Claire Campbell-Best

2/4/24

There are records of bats and nesting swifts in this area. If there were opportunities for roosting bats or nesting birds in the previous cladding these would no longer be available. Installation of a bat box or a swift nest box would mitigate for loss of potential roost sites. An additional box would provide biodiversity enhancement as required by local and national policy. If neither are possible then the websites given for additional information will provide alternatives.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk › our-work › putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
