

Ecology response amended for H/24/96887 17B HAZEL CLOSE, CHANDLER'S FORD,
EASTLEIGH, SO53 5RF

Two storey side extension. Single storey rear extension

Alex Stone

8/4/24

I have reviewed the site photos and do not see any potential habitat for protected species on site or on the building. Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

A biodiversity enhancement plan can be conditioned.

There are records of bats, hedgehogs, amphibians and reptiles near this site. It is not clear whether building this extension would involve removing the existing garage, as the site plan shows parking for three cars and the aerial photo from Grid Reference finder shows a large garage and a small footpath in this area.

Site photos of the house and garden are required to determine whether a survey will be needed. The proposed extensions would remove a large part of the existing garden.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
