

Ecology response for H/24/97171 50 BOWERS DRIVE, BURSLEDON, SOUTHAMPTON, SO31 8LZ

Loft conversion with dormer to front and rear of property

Alex Stone

17/4/24

There are records of bats near this site, however this building is a new build house in a new development with no visible potential bat roost features and very little vegetation which would be used by bats nearby.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>

Biodiversity enhancements for householder applications

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF paragraph 180. A bat box and a swift nest box may be appropriate for this building, however a bat box should not be mounted on the same gable end as the street lamp.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
