SOUTHAMPTON, SO31 8LP

Loft conversion with flat roof rear dormer

Claire Campbell-Best

23/4/24

I have reviewed the site visit photos. While there are a few roof tiles that are slightly out of line, I don't see any potential bat roost features.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>

A biodiversity enhancement plan can be conditioned.

There are records of bats very close to this site.

Street view photos of this house are not available on Google maps.

I need to review close up photos of the roof, chimney, flashing, soffits and fascia to determine whether a preliminary bat roost appraisal will be required.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
