

Ecological Enhancement Measures

On commencement of the development, a Vivara Pro Woodstone Bat Box will be installed in a retained tree, the location of which will be advised by an ecologist. The box is to be inspected annually and immediately replaced if damaged.

A Woodstone House Sparrow Nest Box will be installed on completion of the development and under the supervision of an ecologist, to determine the best location. The nest box will be cleaned once a year, when the youngsters have flown out.
