

Ecology response for H/24/97285 10 ST AUSTELL CLOSE, BISHOPSTOKE, EASTLEIGH, SO50 6GQ

Two storey side/rear extension following the demolition of the existing outhouse/store and alterations to fenestration

Claire Campbell-Best

20/5/24

This site is in a green impact risk zone for great crested newts. There are records of bats, slow worms, stag beetles and hedgehogs nearby.

I don't see any obvious potential bat roost features on the house or outbuilding from the photos available on Google maps.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>

A precautionary working method for slow worms, stag beetles and hedgehogs will be required.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF paragraph 180. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
