

Ecology response amended for H/24/97402 109 SATCHELL LANE, HAMBLE-LE-RICE,
SOUTHAMPTON, SO31 4HL

Loft conversion to include the raising of roof ridge height, half hip-to-gable alterations, 1no. front and rear facing dormers and two storey front extension together with external alterations.

Claire Campbell-Best

12/6/24

The site visit photos show that there are Velux windows in the existing loft space and no gaps in the roof tiles. However, there are gaps under many of the fascia boards which could be potential bat roost features for crevice dwelling bats. A Preliminary Bat Roost Appraisal is required before determination.

This site is in a green impact risk zone for great crested newts. There are records of bats, slow worms, common lizards, and hedgehogs nearby. To determine whether a bat survey is required I need to review close-up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF paragraph 180. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
