

Ecology response amended for H/24/97370 12 OAK VALE, WEST END, SOUTHAMPTON, SO30 3SF

Conversion of existing garage into annexe with extension

Alex Stone

6/6/24

I have reviewed the site photos of the rear of the house and garden. I don't see any potential features for bats, nesting birds or great crested newts.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>

Part of this site in an amber impact risk zone for great crested newts. There are records of bats and nesting swifts nearby.

I have reviewed the photo of the front of the existing garage on Google maps and do not see any potential bat roost features. To determine whether any surveys are required, I need to see the rear of the garage and the rear garden.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF paragraph 180. A bat brick and a swift brick may be appropriate for this site, although the swift nest box may need to be on the main house rather than the annexe to be mounted at the appropriate height.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
