Morning Rebecca

Figure 5.1.3 on page 18 of the Noise Assessment shows the proposed relocation of the retained condenser units. So long as that accords with the application drawings; the consultant has assessed the impact from this new location and no further information is needed. If the location might without consent change during the project or if new plant might be installed this would alter the assessment of noise risk. I can suggest a condition if such changes wouldn't require either a Variation or separate application. Let me know if you think this is necessary.

Regards

Stuart
