I have just seen the input by the architect for the above application
I would like to bring to your attention to. "The Chandlers Ford And Hiltingbury Character
Areas" document adopted January 2005.

Particularly point 60.BEi,ii,iii then under objectives item9 point
three,point10,point11,point18/20/

With regard to the architects comments The following issues are addressed
01 the statement that this not a unique development is false ,it is true some houses have
been overextended but all having hanging tiles.The house towards the bottom of the close
demonstrate the unique open plan development.Nos 2 to 7 have retained the original
characteristics

01.01the cladding is described as black cement and will stretch halfway across the
complete structure thereby obtaining a top and bottom black facade facing up the close
totally overbearing the aspect of the close.

0301 The black gates do change the current situation due to the height of the
structure.These gates will be automatic controlled by the occupants thereby causing delay
and possible congestion in the hammerhead ,possibly blocking access to no.6

0401The additional height of the planned extension and its closeness to No.4 would
effectively add additional shade over no4 garden and possibly restrict light to the garage.
This is admitted in the summary written by the architect

05.01The solar panels are not clearly shown in the plans but are undoubtedly an eye sore
It was suggested that the movement of the panels should include all panels be moved
further towards no.5 property to take them away from no 4.

I trust you will consider this reply to the architects missive.
It appears to me that perhaps you should visit the site to understand the issues raised.
Furthermore I shall consider asking my local councillor to advise me how to proceed over
this planning application

Regards
Keith Webb
