

Ecology response for H/24/98434 15 WHEATSHEAF COURT, HEDGE END, SOUTHAMPTON, SO30 4DX

Removal of hedge on North of property adjacent to highway and erection of 2m fence.

Rachael Morris

9/12/24

This site is in an amber impact risk zone for great crested newts. **Red** (highly suitable habitat) or **Amber** (suitable habitat, likely to be present) – *When development falls into the red or amber zones on the impact risk map, developers MUST prove to their local planning authorities that their development plans pose 'no risk' to great crested newts, this can be done in one of three ways:*

1. Demonstrate that newts don't occur on your site (usually by commissioning an ecological consultant to carry out a site assessment).
2. Apply to Natural England for a Standard Licence – this can only be done after planning permission. You will need to commission an ecologist to carry out a survey and design a great crested newt mitigation scheme.
3. Join the NatureSpace District Licence Scheme, which usually provides the quickest, most certain and least risky option where a licence is required.

There are records of slow worms, bats, stag beetles, and hedgehogs close to the site. Nesting birds could also be using this hedge.

Photos of the hedgerow proposed to be removed within the context of the garden and any pavement nearby are required to determine whether further survey will be required.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF paragraph 180.
