

Nature-led

Green space is a priority for the new development, and a large proportion of the site would be made up of publicly accessible open spaces.

Planting new woodlands to exist alongside current mature trees, the creation of a network of green corridors, nature trails and community gardens will cultivate a nature-led scheme. Bloor is committed to achieving a biodiversity net gain through the introduction of attenuation features, wildflower planting, natural play areas and landscaped areas.

The masterplan is being designed to sensitively respond to the edge of settlement location, maximising green, open space and reflecting the character of the surrounding area.

Highways, access and parking

The proposed development would be designed to meet Eastleigh Borough Council's standards, including width of roads and number of parking spaces.

Safe walking and cycling routes would be prioritised over vehicles to encourage sustainable movement.
