Light Study

2 WESTERN ROAD

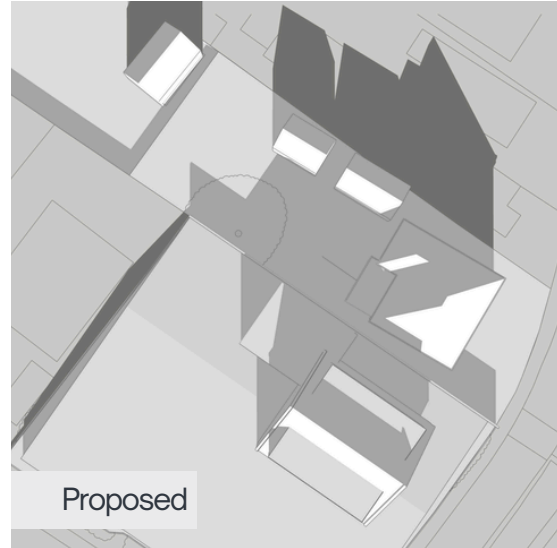

West End, Southampton SO30 3EL

The following study has been prepared to support the householder application at 2 Western Road in which the applicant seeks to extend and alter their home. The existing dwelling and proposed dwelling have been modelled in the context of the site to evaluate the impact on 17 Western Road as a result of the proposed development.

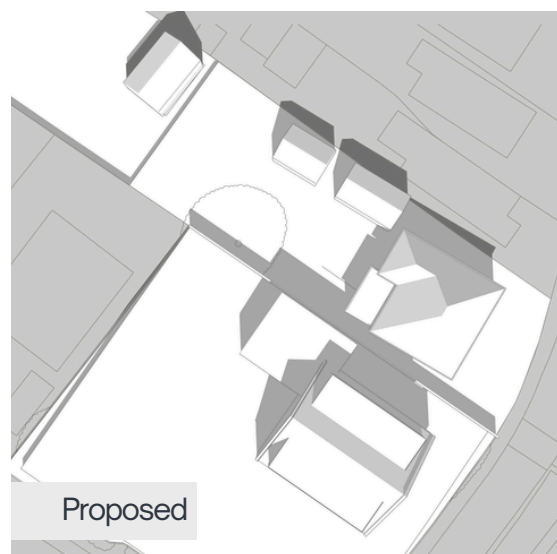

For the avoidance of doubt, it should be noted that the wall position of the proposed dwelling remains consistent with the existing dwelling on its north, east and west elevations. While the replacement carport/garage is set slightly to the west and extends to the east of the garage it replaces, its height sits below the ridge height of the existing garage.

The following page outline the shadow from the existing and proposed development at midday during the winter solstice, spring equinox, summer solstice and autumn equinox.

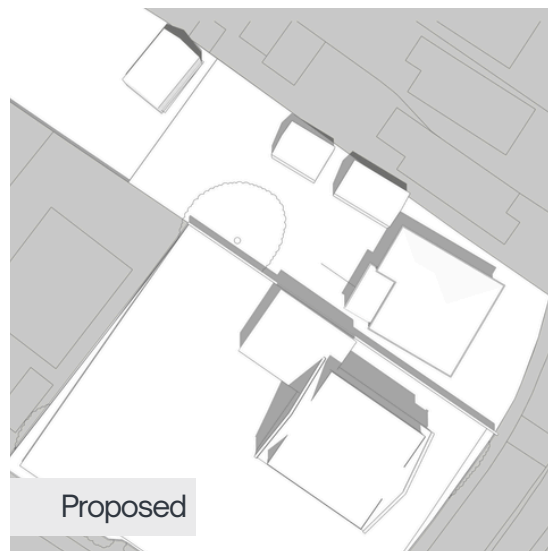

Winter Solstice

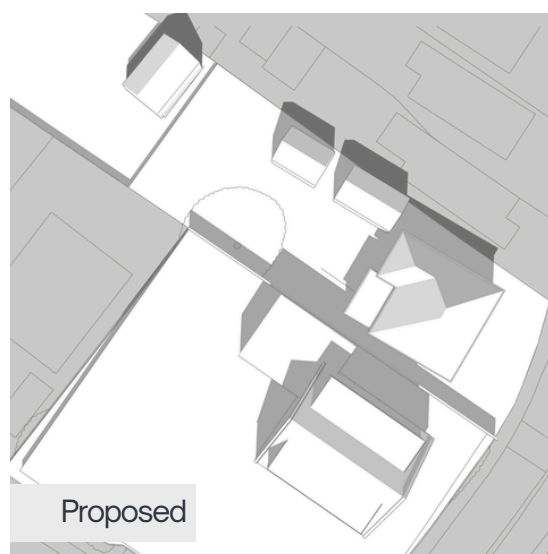

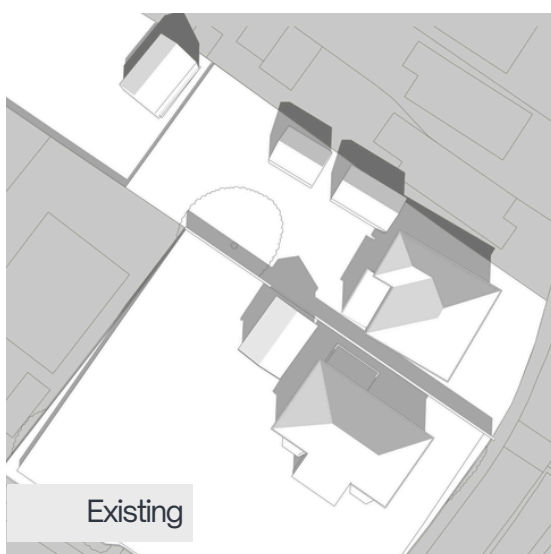

Spring Equinox

Summer Solstice

Autumn Equinox
