Hi Gary.

I refer to the reserved matters referencing the Noise Assessment report ARUP 20th July 2023 and comment on Environmental Noise Impact.

This latest assessment report is to evaluate the effectiveness of HCC's revised noise mitigation proposal and compare its performance relative to the original noise mitigation design submitted with the (now consented) housing scheme O/18/83698.

The only change to the noise model was the inclusion of the new bund profiles with the 1m vertical barrier.

The revised mitigation design now being proposed by HCC, has been shown to provide a comparable level of mitigation to that obtained from the original 2018 design. In some cases, it offers a slight improvement in attenuation of road noise at several of the assessment locations.

The current 'Proposed HCC '2023' mitigation strategy would provide a slightly better overall noise reduction when compared against the 'Original HCC 2018' design (which has already received planning approval).

I recommend the proposals go forward as they can be incorporated into a formal application to determine Condition 8 of the outline approval.

My contract with Eastleigh has finished, I will be handing over to the new permanent staff member [Andre] on Tuesday 4th and will include this case as he may wish to peer review my recommendations.

Thanks
