

Ecology response for H/25/98818 8 SPARROW SQUARE, EASTLEIGH, SO50 9LB

Proposed single-storey rear extension and retrospective application for a semi-permanent front access ramp to support disabled access

Dorothy Hei-Tung-Hoh

18/2/25

There are records of reptiles, bats and hedgehogs near this site. I have reviewed the photos on Google maps and do not see any habitat for these species which would be affected by the proposals. An informative and a precautionary working method must be agreed. This should include:

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp.

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Any vegetation to be removed to facilitate the development must be removed outside of bird nesting season (which is usually between the beginning of March and the end of August) or if this is not possible then only after being checked for nesting birds by a suitably qualified ecologist up to 24 hours before the start of works. If any active nests are found, work must stop and a 5 m buffer must be erected around the nest to protect it from disturbance until after the birds have fledged and left the nest.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. Adding additional plants for pollinators to the existing garden or an area for hedgehogs would be sufficient enhancement.
