Overhanging Oak tree limb to be cut back 2m.

The neighbouring property has reported that branches leaves and debris from the overhanging Oak tree have fallen into their garden and decking while their children were playing. Additionally, the tree's leaf fall has caused slime to accumulate on the decking, making it slippery which has resulted in falls due to the slippery decking and one minor sustained a head injury after tripping over a tree branch and hitting their head on the stones.

Prune back the main overhanging limb by 2m with a maximum cut diameter of 200mm.
