Good afternoon Rebecca,

Following our discussion regarding this last week and the reason for not being possible to hold this planning application ( As the noise levels predicted for the new plant are considerable low) until a further investigation is done, I would suggest the following condition requesting for a post installation noise assessment.

“A post-installation noise survey and report must be conducted within 1 week of the plant becoming fully operational this report must be submitted to the Local Planning Authority (LPA) and demonstrate compliance with the noise calculations set in the original noise report (Sustainable Acoustics Noise Assessment Report No. 25-0043-0 R01 dated 04 April 2025). The assessment shall be carried out by a suitably qualified acoustic consultant and shall consider the plant operating at full capacity as well as all the existing plant operating at full capacity”. This assessment also needs to present from actual noise measurements over daytime and nighttime periods that the cumulative noise for all plant operating at full capacity is below background level at the closest properties during daytime and nighttime.

**Reason:**

To safeguard the amenity of nearby residents and to ensure the development does not result in an unacceptable increase in noise pollution, in line with the National Planning Policy Framework (NPPF) and relevant local planning policy.”

Thank you

Andre
