[REDACTED]

Good morning Gina

Hope you are well, my name is Dean Palmer I am the managing director of Hampshire home improvements.

I have read through the communication regarding the above application and would like you to consider the height measurements I have listed below I only ask as my clients would really prefer the original design due to allowing the most amount of light into the existing room, we feel the flat roof option with a light box will decrease the light dramatically.

The design applied for is a 10 degree mono pitch light weight tiled roof system (supalite roof systems) this has an overall height to the external of 3002mm from dpc made up of 2100mm to head of frame and a roof rise of 902mm to the external not including lead flashing.

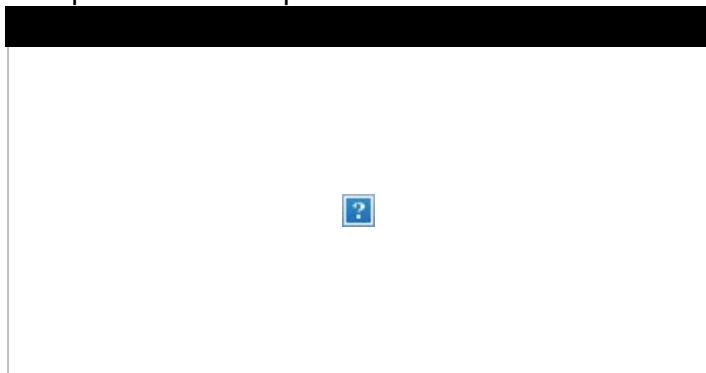

The flat roof design would be frame height of 2100mm with a rise of 590.. to the kurb and an additional 32mm for the glass making overall height of 2722mm.

This means a height difference of only 280mm I would like you to consider the first application please now I have given accurate measurements.

Kind regards

Dean
